Climate Change, Social Inequality, and Doom William M. Epstein,2025-09-16 A critical examination of how inequality and cultural inertia hinder meaningful climate action The challenges of climate change like so many issues today are not evenly distributed across social and economic lines In this sobering exploration of the interconnected crises of climate change and social inequality William M Epstein examines how entrenched cultural values and systemic inequities thwart

meaningful climate action driving humanity closer to catastrophic consequences Epstein outlines three potential climate futures ranging from manageable to devastating and scrutinizes society's inability to confront these realities with meaningful action He argues that solutions exist but they demand sacrifices and transformations that clash with deeply rooted societal norms Epstein highlights the global indifference to equality and environmental stewardship and exposes the tragic inertia that imperils democracy the environment and humanity itself By examining the broader implications of inequality ranging from resource distribution to policy inertia he reveals how societal values shape environmental outcomes and the growing divide between those who bear the brunt of climate change and those who remain insulated Offering a sharp critique of romanticized individualism and its role in undermining collective action this provocative book challenges readers to rethink society's capacity and willingness to confront existential and environmental threats A profound and timely work Climate Change Social Inequality and Doom confronts the moral and political failures that define the climate crisis and reveals the stark choice between an equitable sustainable future and irreversible decline

After Cancún Elmar Altvater, Achim Brunnengräber, 2011-09-05 The world is facing several serious challenges at the close of the fossil and nuclear energy regime the limited resources of cheap conventional oil can only be surmounted by tapping unconventional oil reserves e.g. deep sea oil The explosion of the oil platform Deepwater Horizon in 2010 and the subsequent oil spill caused enormous damage which even a year later cannot be fully estimated Another even more important threat emanating from the fossil and nuclear energy regime has been brought to our attention by the Fukushima disaster Last but not least the problem of climate change caused by an increase in greenhouse gas emissions is looming despite the fact that the international community has agreed on a considerable reduction of these emissions Is this poor result of the Kyoto Protocol and the failure of successive climate conferences the consequence of a preference for the use of market based instruments The majority of climate scientists economists and politicians believe in the efficiency of cap and trade regulations They even conceive them as a constituent ingredient of a Green New Deal or Global Green Recovery The contributions in this volume provide a critical examination of the theoretical foundations the political implications and the empirical experiences of the application of market mechanisms and financial instruments to climate policy

Energy Diversity for Carbon Neutrality Alaa Kafafi, 2025-06-16 We are currently experiencing the greatest change in the economy since the industrial revolution the transition to net zero emissions The book aims to educate professionals industries and consumers on the diverse energy mix needed for power generation This mix must meet the growing demand for energy protect the climate and promote economic growth by making energy affordable for both households and businesses Kafafi discusses three main issues high carbon emissions energy supply shortages and

high costs as well as the importance of all stakeholders contributing to the energy transition strategy. He argues that a diverse energy mix including renewables, natural gas plants, and advanced nuclear reactors is essential for both energy security and climate health. Encouraging industries to improve energy efficiency through emissions taxes and educating customers on energy conservation will accelerate this transition. Additionally, a modern power grid is crucial for the success of this shift towards a green economy, and innovations are expected to reduce the cost of expensive carbon capture technologies.
