## **Global Warming The Science Of Climate Change Hodder Arnold Publication:**

**Global Warming** Frances Drake, 2014-05-01 This topical textbook provides a bridge between technical and popular texts on global warming within the broader context of climate change. Written at an introductory level, it explains the interacting components of this system, what the greenhouse effect is, and how scientists seek to predict climate change. It makes accessible the technical and heavy science literature to the non-science student. Global warming is one of the major environmental problems facing the world today. But it is an issue surrounded by great contention because it is based largely on scientific prediction and has yet to be proven. Opinion is divided regarding whether global warming will occur and if it does, what the effects will be. In order to appreciate the uncertainties surrounding this issue, it is necessary to understand the workings of the climate system and the methods by which scientists seek to predict climate change. Global Warming aims to make accessible the heavily technical literature to the non-science student, providing a bridge between the highly scientific and the popular non-academic texts. Placing global warming within the broader context of climate change, this textbook details the interacting components of the climatic system, reviewing the importance of changing carbon dioxide levels for the evolution of the Earth's atmosphere and climate. Utilising observed and modelled data, it presents the latest evidence for and against global warming whilst highlighting the difficulties involved with analysing both types of data and introducing areas of controversy within research. The book also addresses the important problem of making policy decisions for the future based on the uncertain science of global warming.

**Weather, Climate and Climate Change** Greg O'Hare, John Sweeney, Rob Wilby, 2014-05-22 A timely and accessible analysis of one of the most crucial and contentious issues facing the world today: the processes and consequences of natural and human-induced changes in the structure and function of the climate system. Integrating the latest scientific developments throughout the text, centres on climate change control, addressing how weather and climate impact on environment and society. *A Climate for Change* Katharine Hayhoe, Andrew Farley, 2009-10-29 Most Christian lifestyle or environmental books focus on how to live in a sustainable and conservational manner. A CLIMATE FOR CHANGE shows why Christians should be living that way and the consequences of doing so. Drawing on the two authors' experiences, one as an internationally recognized climate scientist and the other as an evangelical leader of a growing church, this book explains the science underlying global warming, the impact that human activities have on it, and how our Christian faith should play a significant role in guiding our opinions and actions on this important issue.

**Global Warming and the Political Ecology of Health** Hans Baer, Merrill Singer, 2016-09-17 In this groundbreaking global analysis of the relationship between climate change and human health, Hans Baer and Merrill Singer inventory and critically analyze the diversity of significant and sometimes devastating health implications of global warming. Using a range of theoretical tools from anthropology, medicine, and environmental sciences, they present ecosyndemics as a new paradigm for understanding the relationship between environmental change and disease. They also go beyond the traditional concept of disease to examine

changes in subsistence and settlement patterns land use and lifeways throwing the sociopolitical and economic dimensions of climate change into stark relief Revealing the systemic structures of inequality underlying global warming they also issue a call to action arguing that fundamental changes in the world system are essential to the mitigation of an array of emerging health crises link to anthropogenic climate and environmental change
