The Oxford Handbook of Externalizing Spectrum Disorders Theodore P. Beauchaine, Stephen P. Hinshaw, 2015-10-01 Recent developments in the conceptualization of externalizing spectrum disorders including attention deficit hyperactivity disorder conduct disorder antisocial personality disorder and substance use disorders suggest common genetic and neural substrates Despite this neither shared vulnerabilities nor their implications for developmental models of externalizing conduct are captured by prevailing nosologic and diagnostic systems such as the DSM 5 The Oxford Handbook of Externalizing Spectrum Disorders is the first book of its kind to capture the developmental psychopathology of externalizing spectrum disorders by examining causal factors across levels of analysis and developmental epochs while departing from the categorical perspective World renowned experts on externalizing psychopathology demonstrate how shared genetic and neural vulnerabilities predispose to trait impulsivity a highly heritable personality construct that is often shaped by adverse environments into increasingly intractable forms of externalizing conduct across development Consistent with contemporary models of almost all forms of psychopathology the Handbook emphasizes the importance of neurobiological vulnerability and environmental risk interactions in the expression of externalizing behavior across the lifespan The volume concludes with an integrative ontogenic process model of externalizing psychopathology in which diverse equifinal and multifinal pathways to disorder are specified

Life Cycle Sustainability Assessment (LCSA) Subramanian Senthilkannan Muthu, 2021-09-21. Environmental Life Cycle Assessment (ELCA) that was developed about three decades ago demands a broadening of its scope to include lifecycle costing and social aspects of life cycle assessment as well, drawing on the three pillar or triple bottom line model of sustainability which is the result of the development of the Life Cycle Sustainability Assessment (LCSA). LCSA refers to the evaluation of all environmental, social and economic negative impacts and benefits in decision making processes towards more sustainable products throughout their life cycle. Combination of environmental and social life cycle assessments along with life cycle costing leads to life cycle sustainability assessment (LCSA). This book highlights various aspects of life cycle sustainability assessment (LCSA).

The Neurobiology and Genetics of Gilles de la Tourette Syndrome: New Avenues Through Large-Scale Collaborative Projects Peristera Paschou, Kirsten R. Müller-Vahl, 2018-03-13 Gilles de la Tourette Syndrome (TS) is a common albeit severely under diagnosed neuropsychiatric disorder that is caused by a complex genetic basis interacting with environmental factors. High comorbidity rates with other neurodevelopmental disorders such as attention deficit hyperactivity disorder and obsessive compulsive disorder raise the intriguing hypothesis of a shared etiological background. Abnormalities of corticostriatal, thalamic, cortical circuits, CSTC and dysfunction of both dopamine and serotonin neurotransmitter systems are assumed to be associated with TS. Recently, multiple lines of evidence also point towards an important role of additional neurotransmitters such as histamine and glutamate. For a very long time, efforts to elucidate the etiology and pathophysiology of TS have been fragmented and hampered by low statistical power. Finally, after more than two decades of active research aiming to identify the etiology and pathophysiology of TS, we are on the verge of a new era promising exciting and rapid discoveries in the field. Investigators from around the world, representing multiple disciplines and scientific approaches, are joining their efforts in large scale initiatives supported both by European Union and US National funding agencies such as the European funded EMTICS, TACTICS and TS GeneSEE consortia, the Marie Curie Initial Training Network TS EUROTRAIN and the European Society for the Study of TS, joining forces with the NIH funded TSAICG, GGRI and Tic Genetics consortia. Importantly, all these initiatives are supported by TS patient support and advocacy groups. Multiple resources are being consolidated and coming together to serve the study of TS, including large well characterized patient cohorts and specialized epidemiological databases such as the unique resource of the Netherlands Twin Register. This research topic showcases current large scale collaborative efforts aiming to elucidate the genetic and neurobiological background of TS through diverse approaches: from genomewide association studies aiming to identify common variants associated to the disorder, to neuroimaging studies and animal models. Furthermore, current approaches on the clinical assessment and management of the disorder are presented. Propelled by the

gradual availability of large scale TS cohorts novel methodologies and importantly sheer enthusiasm by multiple researchers working together across different countries the new era of the neurobiology of TS holds the promise to identify novel targets for improved therapies
