International Journal of Radiation Biology ,2000

Radiolabeled Monoclonal Antibodies for Imaging and Therapy Suresh C. Srivastava,2013-03-14 The advent of hybridoma technology leading to the successful production of monoclonal antibodies against a variety of tumor associated antigens has during the last decade provided a very powerful tool for research and clinical investigations These highly specific reagents have essentially replaced the polysera of the

earlier days The successful demonstration of the many wide ranging capabilities of the monoclonal antibody technique has already begun to exert an enormous impact on diverse areas of research in basic science and medicine In particular the potential of monoclonal antibodies to serve as carriers for selective targeting of radionuclides to tumors for diagnosis or therapy has stimulated an intense surge of research interest and even revived hopes of realizing Ehrlich s concept of the magic bullet Indeed the technology appears to be on the threshold of a revolution in diagnosing and treating malignant disease Much work remains to be done however and even though the progress has been impressive results to date have shown only moderate success There is no question that the limited success we have achieved thus far is merely a prelude to the many more exciting developments yet to come **Cumulated Index Medicus** ,1989 **Anticancer Research** ,2000

opportunity but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy

Biological Mechanisms and the Advancing Approaches to Overcoming Cancer Drug Resistance Andrew Freywald, Franco Vizeacoumar, 2020-11-17 Biological Mechanisms and the Advancing Approaches to Overcoming Cancer Drug Resistance Volume 12 discusses new approaches that are being undertaken to counteract tumor plasticity understand and tackle the interactions with the microenvironment and disrupt the rewiring of malignant cells or bypass biological mechanism of resistance by using targeted radionuclide therapies This book provides a unique opportunity to the reader to understand the fundamental causes of drug resistance and how different approaches are applied It is a one stop shop to understand why it is so difficult to treat cancer and why only a very few patients respond to therapy and a significant portion develop resistance Despite a rapid development of more effective anti cancer drugs and combination therapies cancer remains the leading cause of lethality in the developed world The main reason for this is the ability of heterogeneous subpopulations of tumor cells interacting with constantly evolving tumor microenvironment to resist elimination and eventually trigger cancer relapse In this book experts review current concepts explaining molecular and biological mechanisms of cancer drug resistance and discussing advancing approaches for overcoming these therapeutic challenges Provides the most updated knowledge on the mechanisms of cancer drug resistance and the emerging therapeutic approaches reviewed by experts in the field Brings detailed analyses of most important recently reported developments related to drug resistance and their relevance to overcoming it in cancer patients Discusses in depth molecular mechanisms and novel concepts of cancer resistance to conventional and advanced therapies

Cancer Immunotherapy James Allison, Glen Dranoff, 2006-05-19 For some time immunotherapy has been heralded as a breakthrough approach for cancer treatment Although the potential of this strategy remains solid the approach needs considerable refinement Whilst some programmes are looking to increase the understanding of molecular and cellular mechanisms underlying the stimulation of antitumor immunity others are trying to find the most appropriate clinical setting that will reveal the role of the immune system in combating cancer Among the most important discoveries have been tumor specific antigens This thematic volume highlights some key issues and discusses where they may move forward It has been put together by two leading cancer immunotherapists from two eminent institutions that focus on cancer research
