Folksonomies. Indexing and Retrieval in Web 2.0 Isabella Peters, 2009-12-23 In Web 2.0 users not only make heavy use of Collaborative Information Services in order to create publish and share digital information resources what is more they index and represent these resources via own keywords so called tags The sum of this user generated metadata of a Collaborative Information Service is also called Folksonomy In contrast to professionally created and highly structured metadata e.g. subject headings thesauri classification systems or ontologies which are applied in libraries corporate information architectures or commercial databases and which were developed according to defined standards tags can be freely chosen by users and attached to any information resource As one type of metadata Folksonomies provide access to information resources and serve users as retrieval tool in order to retrieve own resources as well as to find data of other users The book delivers insights into typical applications of Folksonomies especially within Collaborative Information Services and discusses the strengths and weaknesses of Folksonomies as tools of knowledge representation and information retrieval More over it aims at providing conceptual considerations for solving problems of Folksonomies and presents how

established methods of knowledge representation and models of information retrieval can successfully be transferred to them
