Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences

Alexander Bucksch, Dan Chitwood, 2017-10-13 An increasing population faces the growing demand for agricultural products and accurate global climate models that account for individual plant morphologies to predict favorable human habitat. Both demands are rooted in an improved understanding of the mechanistic origins of plant development. Such understanding requires geometric and topological descriptors to characterize the phenotype of plants and its link to genotypes. However, the current plant phenotyping framework relies on simple length and diameter measurements which fail to capture the exquisite architecture of plants. The Research Topic **Morphological Plant Modeling: Unleashing Geometric and Topological Potential within the Plant Sciences** is the result of a workshop held at National Institute for Mathematical and Biological Synthesis (NIMBioS) in Knoxville, Tennessee, from 2-4 September 2015. Over 40 scientists from mathematics, computer science, engineering, physics, and biology came together to set new frontiers in combining plant phenotyping with recent results from shape theory at the interface of geometry and topology. In doing so, the Research Topic synthesizes the views from multiple disciplines to reveal the potential of new mathematical concepts to analyze and quantify the relationship between morphological plant features. As such, the Research Topic bundles examples of new mathematical techniques including persistent homology, graph theory, and shape statistics to tackle questions in crop breeding, developmental biology, and vegetation modeling. The challenge to model plant morphology under field conditions is a central theme of the included papers to address the problems of climate change and food security that require the integration of plant biology and mathematics from geometry and topology research applied to imaging and simulation techniques. The introductory white paper written by the workshop participants identifies future directions in research, education, and policy making to integrate biological and mathematical approaches and to strengthen research at the interface of both disciplines. **Seedlings**

Stephen W. Adkins, I. Kranner, M. I. Daws, W. Stuppy, 2015 Seedling establishment is the most critical phase in plant development, making the seedling an important area in basic and applied research. This new graduate-level textbook presents key topics such as different types of germination, the transition from seed to seedling, hormonal regulation of tropisms, and morphogenesis, and autotrophy acquisition, going on to consider seedling ecology, how seedlings survive in extreme environments, and the seedling stage in weeds, agriculture, and environmental plants. Written by authors from diverse fields of study and research, this textbook is an essential resource for students and researchers in plant ecology, botany, agriculture, conservation, and restoration ecology. **CRISPR-Based Gene Editing** Shakeel Ahmad, Asif Ali Khan, Muhammad Arshad Javed, 2025-07-15 The discovery of CRISPR has revolutionized crop improvement in agriculture and is emerging as a key factor in addressing the global food security challenges. This new volume highlights the new frontiers and applications of the cutting-edge CRISPR-based gene editing systems and discusses how to harness the power of these tools for improving food

Biology Mariëlle Hoefnagels,2020 For years biology instructors have recognized that we need to turn away from teaching methods that reward students who memorize and regurgitate superficial knowledge Instead we need to emphasize deeper learning that requires students to understand and apply course content This idea is

precisely what I have tried to achieve since I started teaching at the University of Oklahoma in 1997 and it has been a guiding principle in the creation of my books and digital material as well. This edition retains what users have always loved about this book: the art program, readable narrative, handy study tips, Investigating Life essays, tutorial animations, and concept maps. In this edition, I have explicitly connected the unit-wide Survey the Landscape concept map at the start of each chapter to the more detailed chapter-specific Pull It Together concept map at each chapter's end. Not only does each Survey the Landscape now direct the student's attention to the Pull It Together concept map, but the latter includes a specially labeled question directing the reader's attention back to the Survey the Landscape's big picture view. The objective remains the same: to help students see the forest and the trees. One way to motivate students to learn is to help them see that biology is all around them: in food, medicine, pets, water, gardens, parks, and even vacant lots. For students interested in environmental quality, biology forms a foundation for understanding issues ranging in scale from the quality of local tap water to the changing global climate. The Burning Question and Apply It Now boxes support my efforts to help readers learn why biology matters. Each chapter now also includes one or more Scientific Literacy questions. These new thought questions at the end of each chapter will help students practice thinking like a scientist about relevant social, political, or ethical issues. We continue to acknowledge the growing numbers of instructors and students who are embracing digital textbooks. Preface SmartBook user data from thousands of students using the fourth edition helped us to identify passages that needed clarification. The user data also guided us as we created a carefully selected array of digital Learning Resources to accompany many probes in SmartBook. In addition, many chapters have bonus features for ebook users, including new digital-only miniglossaries, tables, figures, and live-action videos of plants, fungi, and animals. See the Changes by Chapter section for a complete listing of our new additions. Ebook users will notice another new feature that supports the goal of bringing biology into student lives: a set of 12 relevancy modules that explain core biology content in the context of timely topics. Relevancy module topics span the book's units from the process of science (Himalayan salt lamps) to organic chemistry (chocolate) to metabolism (weight gain) to cell division (cancer) to evolution (antibiotic resistance) to plant biology (mega crops) to animal biology (running a marathon) to ecology (climate change) and more. Depending on their teaching goals, instructors can assign a module before or after covering the core content and use it as a jumping-off point for class discussions or homework assignments. I believe that one set of tools and techniques does not work in every classroom. For that reason, my team and I are proud to create a package that gives you the flexibility to teach introductory biology in a way that works best for you. The following sections illustrate the features and resources for this edition that can help you meet your teaching goals. I hope that you and your students enjoy this text and that it helps cultivate an understanding of and deep appreciation for biology.

Biology of Seed Plants Dennis Homan,1995-08-01 [The Complete Book of Growing Plants from Seed](#) Elda Haring,1967 *Advances inSeed Biology* Jose C. Jimenez-Lopez,2017-12-06 The seed can be considered the most important plant reproductive element as a dispersal unit for a successful reproduction in all gymnosperms and flowering plants The formation of the seed is part of the process of reproduction in seed plants starting with a mature ovule and following with the fertilization by pollen and some growth within the mother plant to the final outcome of an embryo developed from the zygote the seed coat from the integuments of the ovule and a nurturing endosperm in several species Thanks to this key element as it is the seed the spermatophytes now dominate all types of biological niches on land from forests to grasslands both in hot and cold climates In this metadata information era we have the chance for a deeper understanding of seed physiological and developmental processes in order to provide the fundamental basis for making plant seed biology research relevant and productive coping with future challenges
