Direct Action as Conceptual Art? Avi Brisman, 2025-07-04 This book offers an avenue for understanding the parameters, scope, meanings, and impacts of environmental protest. Focusing on eco-defense, it explores the significance of the communiqué, the written explanation of the reasons for an act of eco-defense, comparing the communiqué to written texts in Conceptual art. It presents and seeks to evaluate the following analogy: act of eco-defense communiqué work of conceptual art written declaration statement. By considering the communiqué in this light, this book helps us better comprehend the rationales for radical environmentalism undertaken for the purposes of reducing environmental harms, natural resource exploitation, and animal abuse.

Federal Land, Western Anger R. McGregor Cawley, 1993 Cawley objectively investigates the Sagebrush Rebellion, looking at the driving force behind the movement, the strategies used by the Rebels, and the consequences of the controversy. He also offers a provocative interpretation of events in federal land policy from the 1960s to the 1990s and establishes a framework for assessing future developments in federal land policy. Includes an analysis of James Watt's beleaguered tenure as Reagan's Secretary of the Interior.

Green Ethics and Philosophy Julie Newman, 2011-05-03 *Green Ethics and Philosophy: An A to Z Guide* covers the moral relationship between humans and their natural environment, specifically targeting the contemporary green movement. Terania Creek and the Forging of Modern Environmental Activism Vanessa Bible, 2018-01-09 This book tells the story of Terania Creek, the world's first direct action blockade in defence of a forest, occurring in Australia in 1979. Contrary to claims that the Australian counterculture was a mere imitation of overseas models, the Australian movement coalescing with a home-grown environment movement came of age at Terania Creek. After five years of polite campaigning failed to stop the logging of ancient Gondwanan rainforest, an organic and spontaneous blockade erupted that would see the forging of a number of ingenious blockading techniques and

strategies The activist repertoire developed at Terania Creek has since echoed across the country and across the Earth This book draws on extensive oral history interviews as well as photographs taken of the protest in 1979 such rich source material brings the story to life Terania Creek and the Forging of Modern Environmental Activism will therefore appeal to both a scholarly audience as well as activists practitioners and counterculturalists Protest, Power, and Change Christopher Kruegler,1997 First Published in 1997 Routledge is an imprint of Taylor Francis an informa company **Environmental Networks and Social Movement Theory** Clare Saunders,2013-04-11 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com Clare Saunders book is an important contribution to the literature on social movements and environmentalism Using the concept of environmental networks it explores the extent to which social movement theory helps us understand how a broad range of environmental organizations interact It considers the practicalities of social movement theories and it goes on to relate them to the practices of environmental networks Theoretically and empirically rich the book draws on extensive survey material with 144 UK environmental organizations as diverse as not in my backyard NIMBY groups reformists conservationists and radicals interviews with more than 40 key campaigners and extensive participant observation particularly in London Focussing particularly on the crucial question of networking dynamics the book reveals that there are broad ranging network links across the movements spatial and ideological dimensions Combined with inevitable ideological clashes and a degree of sectarian rivalry these links helps produce vibrant environmental networks that together work to protect and or preserve the environment This book is an invaluable resource for anyone concerned with environmental issues politics and movements

Bioregionalism and Global Ethics Richard Evanoff,2010-09-13 While a number of schools of environmental thought including social ecology ecofeminism ecological Marxism ecoanarchism and bioregionalism have attempted to link social issues to a concern for the environment environmental ethics as an academic discipline has tended to focus more narrowly on ethics related either to changes in personal values or behavior or to the various ways in which nature might be valued What is lacking is a framework in which individual social and environmental concerns can be looked at not in isolation from each other but rather in terms of their interrelationships In this book Evanoff aims to develop just such a philosophical framework one in which ethical questions related to interactions between self society and nature can be discussed across disciplines and from a variety of different perspectives The central problem his study investigates is the extent to which a dichotomized view of the relationship between nature and culture perpetuated in ongoing debates over anthropocentric vs ecocentric approaches to environmental ethics might be overcome through the adoption of a transactional perspective which offers a more dynamic and coevolutionary understanding of how humans interact with their natural environments Unlike anthropocentric approaches to environmental ethics which often privilege human concerns over ecological preservation and some ecocentric approaches which place more emphasis on preserving natural environments than on meeting human needs a

transactional approach attempts to create more symbiotic and less conflictual modes of interaction between human cultures and natural environments which allow for the flourishing of both

Gene Editing, Law, and the Environment

Irus Braverman, 2017-07-20 Technologies like CRISPR and gene drives are ushering in a new era of genetic engineering wherein the technical means to modify DNA are cheaper faster more accurate more widely accessible and with more far reaching effects than ever before These cutting edge technologies raise legal ethical cultural and ecological questions that are so broad and consequential for both human and other than human life that they can be difficult to grasp What is clear however is that the power to directly alter not just a singular form of life but also the genetics of entire species and thus the composition of ecosystems is currently both inadequately regulated and undertheorized In Gene Editing Law and the Environment distinguished scholars from law the life sciences philosophy environmental studies science and technology studies animal health and religious studies examine what is at stake with these new biotechnologies for life and law both human and beyond
