Ecological Engineering Design Marty D. Matlock, Robert A. Morgan, 2011 Ecologically sensitive building and landscape design is a broad intrinsically interdisciplinary field Existing books independently cover narrow aspects of ecological design in depth hydrology ecosystems soils flora and fauna etc but none of these books can boast of the integrated approach taken by this one Drawing on the experience of the authors this book begins to define explicit design methods for integrating consideration of ecosystem processes and services into every facet of land use design management and policy The approach is to provide a prescriptive approach to ecosystem design based upon ecological engineering principles and practices This book will include a novel collection of design methods for the non built and built environments linking landscape design explicitly to ecosystem services

Handbook of the Philosophy of Climate Change Gianfranco Pellegrino, Marcello Di Paola, 2023-11-24 This Handbook offers a broad yet unified treatment of many philosophical issues connected with climate change ranging from foundational puzzles to detailed applications It extends to many branches of philosophy that are relevant to the understanding of the premises and implications of the impacts of climate change on human and nonhuman life on Earth More specifically the handbook examines the scientific accounts of climate change as well as its causes It explores the tools offered by social sciences and humanities to study the societal premises and impacts of climate change as well as delving deeper into the ethical and political issues connected with and resulting from climate change By doing so it puts it all in an ecological and historical context In addition the book offers solutions to some important philosophical puzzles and problems and indicates paths of interaction between philosophy and other disciplines The discussion about climate change and the mitigation adaptation policies spans many areas and levels from abstract science and philosophy to current on the ground politics However climate change is also a great a philosophical puzzle Indeed its existential and practical relevance can be thought to largely derive from the philosophical complications it engenders Climate change is applied philosophy par excellence Preventing dangerous anthropogenic climate change needs very good philosophy applied to concrete and specific practical issues Climate change is an area where scholars from very different provenances should cooperate on equal terms having in view a common and really important

topics which are also well suited to junior researchers who seek to better understand the current environmental crisis

Agroecosystem Diversity Gilles Lemaire, Paulo Cesar de Faccio Carvalho, Scott Kronberg, Sylvie Recous, 2018-10-08
Agro Ecosystem Diversity Impact on Food Security and Environmental Quality presents cutting edge exploration of developing novel farming systems and introduces landscape ecology to agronomy It encompasses the broad range of links between agricultural development and ecological impact and how to limit the potential negative results Presented in seven sections each focusing on a specific challenge to sustaining diversity the book provides insights toward the argument that by re introducing diversity it should be possible to maintain a high level of productivity of agro ecosystems while also maintaining and or restoring a satisfactory level of environment quality and biodiversity Demonstrates that diversified agro ecosystems can be intensified with environmental quality preserved restored and enhanced Includes analysis of economic constraints leading to specialization of farms and regions and the social locking forces resisting to diversification of agro ecosystems Presents a global vision of world agriculture and the tradeoff between a necessary increase in food production and restoring environment quality *Climate Vulnerability*, 2013-03-15 Climate change has been the subject of thousands of books and magazines scientific journals and newspaper articles daily It s a subject that can be very political and emotional often blurring the lines between fact and fiction The vast majority of research studies projections and recommendations tend to focus on the human influence on climate change and global warming as the result of CO2 emissions often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence *Climate Vulnerability Five Volume Set* seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom up approach including CO2 emissions population growth emerging affluence and many others to our five most critical resources water food ecosystems energy and human health Inclusively determining what these threats are while seeking preventive measures and adaptations is at the heart of this unique reference work Takes a Bottom Up approach addressing climate change and the threat to our key resources at the local level first and globally second providing a more accurate and inclusive approach Includes extensive cross referencing which is key to readers as new connections between factors can be discovered Cuts across a number of disciplines and will appeal to Biological Science Earth Environmental Science Ecology and Social Science comprehensively addressing climate change and other threats to our key resources from multiple perspectives **Handbook of Ecological and Ecosystem Engineering** Majeti Narasimha Vara Prasad, 2021-05-25 Learn from this integrated approach to the management and restoration of ecosystems edited by an international leader in the field The Handbook of Ecological and Ecosystem Engineering delivers a comprehensive overview of the latest research and practical developments in the rapidly evolving fields of ecological and ecosystem engineering Beginning with an introduction to the theory and practice of ecological engineering and ecosystem services the book addresses a wide variety of issues central to the restoration and remediation of ecological environments

The book contains fulsome analyses of the restoration rehabilitation conservation sustainability reconstruction remediation and reclamation of ecosystems using ecological engineering techniques Case studies are used to highlight practical applications of the theory discussed within The material in the Handbook of Ecological and Ecosystem Engineering is particularly relevant at a time when the human population is dramatically rising and the exploitation of natural resources is putting increasing pressure on planetary ecosystems The book demonstrates how modern scientific ecology can contribute to the greening of the environment through the inclusion of concrete examples of successful applied management The book also includes A thorough discussion of ecological engineering and ecosystem services theory and practice An exploration of ecological and ecosystem engineering economic and environmental revitalization An examination of the role of soil meso and macrofauna indicators for restoration assessment success in a rehabilitated mine site A treatment of the mitigation of urban environmental issues by applying ecological and ecosystem engineering A discussion of soil fertility restoration theory and practice Perfect for academic researchers industry scientists and environmental engineers working in the fields of ecological engineering environmental science and biotechnology the Handbook of Ecological and Ecosystem Engineering also belongs on the bookshelves of environmental regulators and consultants policy makers and employees of non governmental organizations working on sustainable development

River Restoration Bertrand Morandi, Marylise Cottet, Hervé Piégay, 2021-09-27 River Restoration River restoration initiatives are now widespread across the world The research efforts undertaken to support them are increasingly interdisciplinary focusing on ecological chemical physical as well as societal issues River Restoration Political Social and Economic Perspectives provides a comprehensive overview of research in the field of river restoration in humanities and the social sciences It illustrates how in the last thirty years or so such approaches have evolved and strengthened within the restoration sciences The scientific community working in this domain has structured itself often regionally and circumstantially to critically assess and improve restoration policies and practices As a research field river restoration tackles three thematic axes Human river interactions especially perceptions and practices of rivers and how these interactions can be changed by restoration projects Political processes with a particular interest in governance and decision making and a specific emphasis on the question of public participation in restoration projects Evaluation of the social and economic benefits of river restoration River Restoration Political Social and Economic Perspectives encompasses these three topics and more to provide the reader with the most up to date and holistic view of this constantly evolving area The book will be of particular interest to human and social scientists biophysical scientists hydrologists geomorphologists ecologists environmental scientists public policy makers design or planning officers and anyone working in the field of river restoration

Beck, Emmanuelle Cohen-Shacham, 2023-01-27 **Marine Ecosystem Restoration (MER) - Challenges and New**

Horizons Brian Silliman, Avigdor Abelson, Christine Angelini, Gesche Krause, Megan Irene Saunders, Tjisse Van Der Heide, 2023-10-23 Worldwide marine ecosystems have been lost and degraded due to anthropogenic disturbances For example oyster reefs have declined by at least 85% coral reefs by 19% seagrasses by 29% North American salt marshes by 42% and mangroves by 35% from the early 19th century Deepwater reefs and deep sea vents are not immune and have also been reduced in extent in many areas Factors driving these losses include habitat destruction pollution invasive species overfishing trawling mining and more recently climate change effects such as ocean warming species range changes and acidification These habitat declines are occurring at a time when marine waters are being used at or near their maximum productive capacity to meet the contemporary needs of an ever increasing human population Because coastal and marine ecosystems generate some of the richest biodiversity hotspots on Earth and provide critical ecosystem services including storm protection fisheries production and carbon storage over 1 billion US dollars have been spent globally in an attempt to halt and reverse observed declines Early conservation efforts aimed at protecting these valuable and threatened habitats focused on reducing human impacts and physical stressors However with habitat degradation continuing and sometimes increasing in rate it is now clear conservation alone will not be sufficient to protect and reestablish coastal ecosystems Habitat restoration although in existence for many decades has recently been elevated as a new primary strategy to stem and even reverse coastal habitat loss The call for increasing investment in restoration efforts has emerged with significant advances in propagule rearing and dispersion of habitat forming organisms e g oysters seagrasses corals In addition restoration resources are increasingly allocated by governments and or large corporations with the aim to for example fix past landscape engineering efforts that had unintended environmental consequences Such investments are being made to i provide jobs for those unemployed during economic downturns ii restore ecosystems destroyed by natural disasters and stressors iii increase coastal defense in response to increased frequency of intense storms and or iv compensate for pollution and development driven habitat degradation Conservation practitioners have traditionally been skeptical to invest heavily in restoration at large scales because of the high cost per area 10 000 5 000 000 US ha for coastal vs 500 5 000 US ha for terrestrial systems to replant coastal ecosystems and or the high chance that the restored ecosystems will not live long e g outplanted corals For restoration to be effective and employed as a primary method of coastal conservation at relevant scales we must improve its efficiency lower costs and rapidly share and incorporate advances One crucial step will be to identify when and where restoration attempts have been carried out according to state of art ecological theory and gauge their success Another is generating synthesis studies that focus both within and across ecosystems to identify efficiencies adaptations and innovations Work that shows theoretical and methodological innovations in specific ecosystems as well as across systems will be critical to pushing all fields of MER forward Although there is rapidly increasing interest and investment the field of marine ecosystem restoration is just beginning to undergo synthesis Therefore the aim of this

Research Topic is to bring together research contributions to help address this synthesis need provide a spotlight for recent innovations enhance our understanding of successful methods in marine ecosystem restoration and promote integration of ecological sociological and engineering theory into restoration practices *Forests and Climate Change* Hukum Singh, 2024-09-18 This book comprehensively examines the complex relationship between forests and climate change from a biological perspective It explores the effects of climate change such as rising temperatures greenhouse gas emissions changing rainfall patterns droughts and cold spells on individual trees and forest ecosystems It considers how climate change affects forest structure function composition and biodiversity and the adaptive strategies forests employ to cope with changing conditions The book focuses on understanding the adaptive capacity of forests and explores different mechanisms at stand and ecosystem levels that enable forests to respond to changing climatic conditions It discusses how forests acclimate and adapt to new climates by modulating growth rates morphology phenology physiology biochemistry and species composition The role of genetic diversity and evolutionary processes in shaping forest resilience and adaptation is also explored The book also explores potential mitigation strategies to reduce the impacts of climate change Besides this book discusses the ecological principles and the involvement of local communities in conservation and restoration efforts as alternative strategies to enhance the resilience of forest ecosystems against climate change The book provides practical recommendations for policy makers forest managers and conservation practitioners to develop effective climate change adaptation and mitigation strategies in forest landscapes This book serves as a valuable resource and a guide for researchers students and professionals in various fields to protect and sustainably manage vital ecosystems in a rapidly changing climate

Nature-based Solutions for Circular Management of Urban Water Alexandros Stefanakis, Hasan Volkan Oral, Cristina Calheiros, Pedro Carvalho, 2024-03-12 Despite the strong economic growth of the last decades our modern global society is facing the existential threat of climate change It is now realized that the linear economic model is not sustainable in the long run and cannot sustain the life standards The new circular economy approach that is already under discussion suggests the adjustment of our priorities and the re orientation of the future infrastructure investments In this context we are looking for new innovative and sustainable solutions to increase the resiliency of our societies to protect and restore the ecosystems and to maintain the necessary economic growth without further undermining the planet s boundaries The well being of coming generations will depend on our ability to adapt our economies to this challenge In particular transforming today s cities into sustainable cities is one of the main adaptations that will be necessary A holistic approach looking at cities from a system s perspective is needed to achieve this goal Nature based solutions NbS serve exactly this ambitious and multi factorial purpose due to their inherent ability not only to tackle climate change but also to provide a series of ecosystem services and social benefits In the urban context NbS can deal with main challenges such as urban heat islands flooding treatment of wastewater and runoff and food provision At the same time NbS can provide a series of

ecosystem services beneficial for the environment and the society including clean water production nutrient recovery heavy metals retention and a broad range of plant based materials In the new circular economy paradigm NbS can contribute to strategies for climate change adaptation and create a holistic resource management system for the urban biosphere Thus this book aims at providing a single reference that discusses the role and effectiveness of NbS in the urban environment and how these systems can contribute to the circular management of water nutrients and resources towards resilient sustainable and healthy cities The scope of the book extends to various fields and disciplines such as the built environment urban water and wastewater resource recovery urban farming smart sensing research and development technology and innovation society and governance Research studies pilot projects and case studies are part of the book Ecological Engineering and Ecosystem Restoration William J. Mitsch, Sven Erik Jørgensen, 2003-09-18 Completely updated to keep pace with current technology Provides a firm grounding the fundamentals theory and latest techniques Includes completely updated case studies *Green Infrastructure and Urban Climate Resilience* Keerththana Kumareswaran, Guttala Yugantha Jayasinghe, 2023-08-29 This book aims to cover most subject areas of green infrastructure such as components multi functionality and integration to build environment contribution to urban sustainability sustainable and smart city development urban climate change nexus green buildings and rating systems economic assessment and quantification of green infrastructure The impending climate crisis as well as the ongoing COVID 19 pandemic has highlighted the importance of green infrastructure in and around cities prompting a call for more functional and sustainable urban planning and design A number of recent studies have shown that green infrastructure provides a wide range of ecosystem functions and services critical to human well being and urban sustainability which is especially important during climatic and health crises In this book the authors emphasize the importance of existing green infrastructure in coping with climate change induced stresses such as increasing climate variability and extreme temperature and precipitation events as well as contributing to urban dwellers physical and mental health Green infrastructure in both cases plays a significant role in providing urban areas with resilience capacity which is critical to urban sustainability The authors also emphasize the importance of expanding and improving green infrastructure particularly in vulnerable areas through integrative and participatory processes Appropriate integration of green gray infrastructure and development of climate resilient cities is the core theme of this publication Further it emphasizes sustainable development which has become an imperative requirement to the world to move fore and climate change built environment nexus the most critical global crisis Though several books were published globally on the green infrastructure and urban resilience individually books are rarely published combining both disciplines This book identifies and addresses the gap through comprehensively discussing on both interlinked areas which is essential for the sustainable urban development Further it explores on urban climate resilience urban sprawl urbanization resilience drivers essentials of city resilience policy implications challenges and future perspectives This book is a useful fundamental guide in

practical applications of green infrastructure in built environment in sustainability context Further it enlightens on the significance of transforming the conventional building construction trend to sustainable urban planning designs and building development exploring on the strategic pathway on building urban climate resilience while signifying the importance of healthy built environment through discussing on the nexus between climate change and built environment Nature-based Solutions for Urban Resilience and Human Health Bo Hong,Bin Jiang,Henrik Vejre,2024-05-03 Climate change and rapid urbanization have significant impacts on biodiversity and ecosystem functions and services Nature based solutions NBS is an action to work with and enhance nature to solve social challenges and NBS is an umbrella concept for other mature nature based approaches Blue green spaces BGS can provide a wide range of ecosystem services including mitigation of urban heat island effects reduction of flooding mitigation of air pollution and provision of recreational spaces thereby promoting physical and mental health Hence NBSs can serve as cost effective climate mitigation and adaptation tool that contribute to additional co benefits for ecosystem health and human well being Environmentalists epidemiologists ecologists urban planners and policymakers have paid more attention to NBSs for urban resilience and human health In this Research Topic we hope to discuss these topics 1 ecological exposure and health benefits 2 climate adaptation and human health promotion possibilities by NBSs 3 methodological and theoretical approaches as well as technologies of NBSs corresponding to urban resilience 4 underlying pathways and potential mechanisms of NBSs in improving human health and 5 policies and management for planning and design of the successful implementation of NBSs in relation to urban resilience and human health This Research Topic focuses on but is not restricted to the following issues Nature based interventions for climate adaptation Ecological exposure and physical and psychological health outcomes Climate adaption environmental policies and management Theoretical and case based studies on climate mitigation and adaption by NBSs Ecosystem service perspective on promoting urban resilience This Research Topic welcomes the following types of manuscripts Original Research Hypothesis and Theory Review and Perspective
