

The Ecological Validity of Neuropsychological Tests: A Review of the Literature on Everyday Cognitive Skills

Naomi Chaytor¹ and Maureen Schmitter-Edgecombe^{1,2}

Evaluating the ecological validity of neuropsychological tests has become an increasingly important topic over the past decade. In this paper, we provide a comprehensive review of the research on the ecological validity of neuropsychological tests, as it pertains to everyday cognitive skills. This review is presented in the context of several theoretical issues facing ecological validity research. Overall, the research suggests that many neuropsychological tests have a moderate level of ecological validity when predicting everyday cognitive functioning. The strongest relationships were noted when the outcome measure corresponded to the cognitive domain assessed by the neuropsychological tests. Several other factors that may moderate the degree of ecological validity established for neuropsychological tests are in need of further exploration. These factors include the effects of the population being tested, the approach utilized (verisimilitude vs. veridicality), the person completing the outcome measure (significant other vs. clinician), illness severity, and time from injury until evaluation. In addition, a standard measurement of outcome for each cognitive domain is greatly needed to allow for comparison across studies.

KEY WORDS: ecological validity; neuropsychological tests; everyday cognitive skills.

INTRODUCTION

Evaluating the ecological validity of neuropsychological tests has become an increasingly important topic over the past decade. In this paper, we provide an overview of ecological validity in the field of neuropsychology, and evaluate relevant empirical literature on the subject. We begin the review with a discussion of why ecological validity is a critical issue facing neuropsychology. Next, the construct of ecological validity itself and the factors that can complicate the study of ecological validity in the area of neuropsychological assessment are discussed. Following this introduction, we review and summarize the available empirical research on ecological validity and neuropsychological testing (excluding occupational status and basic activities of daily living studies for reasons outlined later). Finally, findings from the empirical lit-

erature are integrated and some tentative answers to the following questions are provided.

1. Is the ecological validity of neuropsychological tests adequate?
2. What variables are important in ecological validity research?
3. How can this information impact current clinical practice?
4. How can this information impact future research?

Definition of the Problem

It is widely agreed that the historical purpose of clinical neuropsychology was to assist in the diagnosis of brain pathology, and neuropsychological tests were successful in doing so (Long and Kibby, 1995). The role of neuropsychological testing, however, has changed with the development of brain-imaging techniques that now allow physicians to gather more precise information about lesion location and type of brain pathology in much less time (Long, 1996). There are, of course, some disorders
