Amphibians Leo Cannon, 2018 Austral Ark Adam Stow, Norman Maclean, Gregory I. Holwell, 2014-12-22 Australia and New Zealand are home to a remarkable and unique assemblage of flora and fauna Sadly though by virtue of their long isolation and a naïve and vulnerable biota both countries have suffered substantial losses to biodiversity since European

contact Bringing together the contributions of leading conservation biologists Austral Ark presents the special features and historical context of Austral biota and explains what is being conserved and why The threatening processes occurring worldwide are discussed along with the unique conservation problems faced at regional level At the same time the book highlights many examples of conservation success resulting from the innovative solutions that have been developed to safeguard native species and habitats in both New Zealand and Australia Austral Ark fills an important gap regarding wildlife gains and declines and how best to take conservation forward to keep this extraordinary area of the world thriving

Conservation Biology for All Navjot S. Sodhi,Paul R. Ehrlich,2010-01-07 Conservation Biology for All provides cutting edge but basic conservation science to a global readership A series of authoritative chapters have been written by the top names in conservation biology with the principal aim of disseminating cutting edge conservation knowledge as widely as possible Important topics such as balancing conservation and human needs climate change conservation planning designing and analyzing conservation research ecosystem services endangered species management extinctions fire habitat loss and invasive species are covered Numerous textboxes describing additional relevant material or case studies are also included The global biodiversity crisis is now unstoppable what can be saved in the developing world will require an educated constituency in both the developing and developed world Habitat loss is particularly acute in developing countries which is of special concern because it tends to be these locations where the greatest species diversity and richest centres of endemism are to be found Sadly developing world conservation scientists have found it difficult to access an authoritative textbook which is particularly ironic since it is these countries where the potential benefits of knowledge application are greatest There is now an urgent need to educate the next generation of scientists in developing countries so that they are in a better position to protect their natural resources *Ecosystem Response Modelling in the Murray-Darling Basin* Neil Saintilan,Ian Overton,2010 Ecosystem Response Modelling in the Murray Darling Basin provides an overview of the status of science in support of water management in Australia s largest and most economically important river catchment and brings together the leading ecologists working in the rivers and wetlands of the Basin It introduces the issues in ecosystem response modelling and how this area of science can support environmental watering decisions The declining ecological condition of the internationally significant wetlands of the Murray Darling Basin has been a prominent issue in Australia for many years Several high profile government programs have sought to restore the flow conditions required to sustain healthy wetlands and this book documents the scientific effort that is underpinning this task In the Southern Murray Darling Basin the River Murray the Murrumbidgee River and their associated wetlands and floodplains have been the focus of the Murray Darling Basin Authority s The Living Murray program and the NSW Rivers Environmental Restoration Program The book documents research aimed at informing environmental water use in a number of iconic wetlands including those along the Murray the Barmah Millewa Forest the Chowilla Floodplain and Lindsay Wallpolla Islands the Coorong and Murray mouth and the Murrumbidgee the Lowbidgee Floodplain Within the Northern Murray Darling Basin research conducted in support of the Wetland Recovery Plan and the NSW Rivers Environmental Restoration Program has improved our knowledge of the Gwydir Wetlands and the Macquarie Marshes and the water regimes required to sustain their ecology *Park Science* ,2004

The Maryland Amphibian and Reptile Atlas Heather R. Cunningham,Nathan H. Nazdrowicz,2018-11-26 The definitive

resource for finding identifying and conserving Maryland's amphibians and reptiles. Naturalists, herpetologists and ecologists alike agree that tracking herpetofauna is a challenging undertaking. Scientists are concerned about the decline of once familiar species but evidence has often been too anecdotal to support firm conclusions. To better understand the distribution of amphibians and reptiles in Maryland and forecast species futures in a time of accelerated environmental threats, conducting a comprehensive statewide survey updating 1970s era distribution maps seemed ideal. However, this endeavor was of an impossibly ambitious scope for scientists alone to tackle. Enter the Maryland Amphibian and Reptile Atlas project, comprising nearly a thousand dedicated citizen scientists who discovered and recorded the locations of herpetofauna throughout every corner of Maryland. In *The Maryland Amphibian and Reptile Atlas*, Heather R. Cunningham and Nathan H. Nazdrowicz present the findings of this massive undertaking. This definitive guide combines nearly 160 comprehensive new herpetological maps with historical distribution maps and in-depth species accounts. Color photos illustrate the natural history of the 89 species of frogs, salamanders, turtles, snakes, and lizards that call the state home. Essays discuss historical studies, the effects of Maryland's current climate, geology, and habitat diversity, and the myriad conservation issues these animals face. This richly detailed book represents a triumph of citizen science and the culmination of an intensive research partnership. It will appeal to both amateurs and professionals interested in herpetology, natural history, or ecology, as well as those with a special interest in Maryland's biodiversity.

The Conservation and Biogeography of Amphibians in the Caribbean Neftalí Ríos-López, Harold Heatwole, 2023-02-28. An expansive and detailed review of the biology of Caribbean amphibians, considering their threats, conservation, and outlook in a changing world. Amphibians are the group of vertebrates undergoing the fastest rate of extinction; it is urgent that we understand the causes of this and find means of protecting them. This landmark illustrated volume brings together the leading experts in the field. As well as offering an overview of the region as a whole, individual chapters are devoted to each island or island group and the measures used to protect their amphibians through legislation or nature reserves. The biological background of insular biogeography, including its methods, analysis, and results, is reviewed and applied specifically to the problems of Caribbean amphibians; this includes a re-examination of patterns and general ideas about the status of amphibians in the Anthropocene. *The Conservation and Biogeography of Amphibians in the Caribbean* offers an important baseline against which future amphibian conservation can be measured in the face of climate change, rising sea level, and a burgeoning human population. Covers over 300 species.

Roads and Ecological Infrastructure Kimberly M. Andrews, Priya Nanjappa, Seth P. D. Riley, 2015-06-01. A practical guide that explains how we can design roads that are compatible with populations of small wildlife. Few of us think twice about driving on roads. Yet the very presence of roads and the act of driving on them can impact the ecological infrastructure that supports an animal's daily life. What chance does a turtle have of successfully laying its eggs when it needs to traverse a busy highway? Is it realistic to expect small mammals to breed when an interstate thoroughfare subdivides their population? These are the sorts

of challenges faced by small often slow moving animals challenges that road engineers and ecologists are trying to address For countless small species vehicles traveling at high speeds are nothing less than missiles shooting across migration pathways For too many animals the danger can lead to the loss of populations in part because they simply are not programmed to react to traffic Salamanders faced with a two lane road between the forest and their aquatic breeding site for example will typically cross that road regardless of the congestion The result can be hundreds of flattened animals in a single night Roads and Ecological Infrastructure is the first book to focus on reducing conflict between roads and small animals Highlighting habitat connections and the challenges and solutions from both transportation and ecological perspectives the volume covers various themes including animal behavior related to roads and design approaches to mitigate the negative effects of roads on wildlife The chapter authors from transportation experts to university researchers each promote a goal of realistic problem solving Conceptual and practical this book will influence the next decade or more of road design in ecologically sensitive areas and should prevent countless unnecessary wildlife fatalities Published in association with The Wildlife Society
