**Linking Species & Ecosystems** Clive G. Jones,John H. Lawton,2012-12-06 I was asked to introduce this volume by examining why a knowledge of ecosystem functioning can contribute to understanding species activities dynamics and assemblages I have found it surprisingly difficult to address this topic On the one hand the answer is very simple and general because all species live in ecosystems they are part of and dependent on ecosystem processes It is impossible to understand the abundance and distribution of populations and the species diversity and composition of communities without a knowledge of their abiotic and biotic environments and of the fluxes of energy and matter through the ecosystems of which they are a part But everyone knows this It is what ecology is all about e.g. Likens 1992 It is why the discipline has retained its integrity and thrived despite a sometimes distressing degree of bickering and chauvinism among its various subdisciplines physiological behavioral population community and ecosystem ecology
