Ferrari, Alasdair Rae, 2019-05-17 This engaging and practical guide is a much needed new textbook that illustrates the power of geographic information systems GIS and spatial analysis Today's planner has a wealth of data available to them much of which is increasingly linked to a specific location From football clubs to Twitter conversations government spending to the spread of diseases data can be mapped Once mapped the data begins to tell stories patterns are revealed and effective planning decisions can be made When used effectively GIS allows students planners residents and policymakers to solve wicked problems in the environment society and the economy Geospatial data is now more freely available than it ever has been as is much of the necessary software to analyse it This contemporary text offers a practical guide to spatial analysis and what it can show us In addition to explaining what GIS is and why it is such a powerful tool the authors cover such topics as geovisualization mapping principles network analysis and decision making Offering more than just theoretical or technical principles and concepts the book applies GIS techniques to the real world draws on global examples and provides practical advice on mapping the built environment This accessible text is essential reading for undergraduate and postgraduate students taking planning modules on GIS data analysis and mapping as well as for all planners urbanists and geographers with an interest in how GIS can help us better understand the built environment from a socio economic perspective

Perspectives in Medical Geography Amy J. Blatt, 2014-06-11 Medical geography is a fascinating area of rapidly evolving study that aims to analyse and improve worldwide health issues based on the geographical factors which have an impact on them Perspectives in Medical Geography will appeal to both novice and seasoned researchers looking to be informed on the latest theories and applications in the field Chapters represent a wide range of industries ranging from private public universities to private companies to non profit foundations Contributors describe ways in which map and geography

librarians can engage in public health research creating data standards archiving map collections and providing mapping GIS services In addition to compiling current theories and practices related to medical geography this volume also features commentaries from two pre eminent geography librarians sharing their perspectives on this emerging field and how map and geographic information librarians can engage in health related research through their profession This book was originally published as two special issues of the Journal of Map Geography Libraries How to Make Maps Peter

Anthamatten,2020-12-27 The goal of How to Make Maps is to equip readers with the foundational knowledge of concepts they need to conceive design and produce maps in a legible clear and coherent manner drawing from both classical and modern theory in cartography This book is appropriate for graduate and undergraduate students who are beginning a course of study in geospatial sciences or who wish to begin producing their own maps While the book assumes no a priori knowledge or experience with geospatial software it may also serve GIS analysts and technicians who wish to explore the principles of cartographic design The first part of the book explores the key decisions behind every map with the aim of providing the reader with a solid foundation in fundamental cartography concepts Chapters 1 through 3 review foundational mapping concepts and some of the decisions that are a part of every map This is followed by a discussion of the guiding principles of cartographic design in Chapter 4 how to start thinking about putting a map together in an effective and legible form Chapter 5 covers map projections the process of converting the curved earth s surface into a flat representation appropriate for mapping Chapters 6 and 7 discuss the use of text and color respectively Chapter 8 reviews trends in modern cartography to summarize some of the ways the discipline is changing due to new forms of cartographic media that include 3D representations animated cartography and mobile cartography Chapter 9 provides a literature review of the scholarship in cartography The final component of the book shifts to applied technical concepts important to cartographic production covering data quality concepts and the acquisition of geospatial data sources Chapter 10 and an overview of software applications particularly relevant to modern cartography production GIS and graphics software Chapter 11 Chapter 12 concludes the book with examples of real world cartography projects discussing the planning data collection and design process that lead to the final map products This book aspires to introduce readers to the foundational concepts both theoretical and applied they need to start the actual work of making maps The accompanying website offers hands on exercises to guide readers through the production of a map from conception through to the final version as well as PowerPoint slides that accompany the text **Fundamentals of Cartography (Second Revised and Enlarged Edition)**

R.P. Misra,2014-01-01 The first edition of Fundamentals of Cartography was published in 1969 by Prasaraunga University of Mysore It was reprinted by the Concept Publishing Company New Delhi in While the book remained in currency the cartographic processes changed drastically when information technology brought a sea of change in the sources of information drafting of maps and printing processes Drawing maps by hand became obsolete surveying whether ground or

aerial was no longer the only major source of information In view of these changes it became necessary to bring out a new edition Realising that unless one knows directions scales projections coordinates ground and air surveys one would fail to understand the proper use of modern information technology in the drawing the maps Thus the contents of 1969 edition are retained and new chapters have been added to update the book In Part II of the book a chapter on Remote Sensing and Satellite Imageries has been added and Part V contains chapters on Computer Aided Cartography Geographic Information System GIS Land Information System LIS and Global Positioning System GPS **Making Maps, Third Edition** John Krygier, Denis Wood, 2016-08-02 Using a wealth of illustrations with 74 in full color to elucidate each concisely presented point the revised and updated third edition continues to emphasize how design choices relate to the reasons for making a map and its intended purpose All components of map making are covered titles labels legends visual hierarchy font selection how to turn phenomena into visual data data organization symbolization and more Back cover New Research in Crime Modeling and Mapping Using Geospatial Technologies Michael Leitner, 2025-03-10 This edited volume offers innovative research and applications in the analysis modelling and mapping of crime using geospatial and GeoAI technologies This is a follow up publication of an edited volume by the same editor with a similar title Crime Modeling and Mapping Using Geospatial Technologies published by Springer in its popular Geotechnologies and the Environment series in 2013 The book comprises sixteen chapters authored by some of the most esteemed researchers in the field These chapters are organized into four sections big data and microspaces Part I mobility Part II drugs Part III and additional geospatial applications Part IV Part I includes five chapters focusing on interactive crime mapping by using large data sets obtained from social media and analyzing these data using AI applications a fundamental spatial problem that considers spatial properties of a crime dataset to determine an adequate areal unit size different aspects of the influence or prediction of crime in microspaces and the use of sampled surface pollen to model the search space for documented forensic cases Part II has four chapters that introduce two route generation heuristics that automate the creation of hot spots policing patrol routes discuss how to optimize police response with two different maximal covering location problems and examine how human mobility patterns impact crime trends and modelling Part III consists of three chapters addressing opioid overdose patterns using a spatial mixed methods approach spatial temporal changes in hot spots of drug related offences and how geospatial technology can be used to empower stakeholders to make informed policy decisions about alcohol related motor vehicle collisions Part IV comprises four diverse chapters that do not fit under a single theme The topics discussed include the impact of video surveillance on the spatial distribution of crime the identification of the location of missing persons outreach events with spatial clustering analysis methods an examination of the distribution patterns of all types of juvenile delinquency to investigate underlying factors and a review and comparison of GeoAI methods for detecting and mapping illegal logging This book would be useful to faculty students and research scholars from geography sociology criminal justice criminology forensic sciences and other

related disciplines as well as to crime analysts working for law enforcement agencies at the local state or federal levels from around the world

Topographic Mapping John N. Hatzopoulos, Despina J. Hatzopoulos, 2024-10-01 This book is addressed to students and professionals and it is aimed to cover as much as possible the broader region of topographic mapping as it has evolved into a modern field called geospatial information science and technology More emphasis is placed on using scientific methods and tools materialized in algorithms and software to produce practical results For this reason beyond the written material there are also many educational and professional software programs written by the first author to help comprehend the individual methodologies developed The Target of this book is to provide the people who work in fields of applications of topographic mapping environment geology geography cartography engineering geotechnical agriculture forestry geointelligence etc a source of knowledge for the broader region so that to help them in facing relevant problems as well as in preparing contracts and specifications for such type of work assigned to professionals and evaluating such contracting results It also aims to be a reference for theory and practice for professionals in Topographic Mapping This book applies a didactics method where with a relatively small effort someone can digest a large volume of simple or complicated knowledge material at a desirable scientific depth within a relatively short time interval The objective that educated people must be smarter than the machine and not treat the machine as a black box being button pushers has been achieved through the first author's experience in the USA and Greece with relative success by adopting this didactics technique There are 14 chapters including Reference systems and Projections Topographic instruments and Geometry of coordinates Conventional construction of a topographic map Design and reproduction of a thematic map Digital Topographic mapping GIS Digital Terrain Models DTM DEM GPS GNSS methods of Photogrammetry Remote Sensing new technologies LIDAR IFSAR Augmented reality Mapping with UAS UAV Drones the method of Least Squares adjustment and Description of educational software accompanying the text
