Vieux, 2016-08-19 This book presents a unified approach for modeling hydrologic processes distributed in space and time using geographic information systems GIS This Third Edition focuses on the principles of implementing a distributed model using geospatial data to simulate hydrologic processes in urban rural and peri urban watersheds The author describes fully distributed representations of hydrologic processes where physics is the basis for modeling and geospatial data forms the cornerstone of parameter and process representation A physics based approach involves

conservation laws that govern the movement of water ranging from precipitation over a river basin to flow in a river Global geospatial data have become readily available in GIS format and a modeling approach that can utilize this data for hydrology offers numerous possibilities GIS data formats spatial interpolation and resolution have important effects on the hydrologic simulation of the major hydrologic components of a watershed and the book provides examples illustrating how to represent a watershed with spatially distributed data along with the many pitfalls inherent in such an undertaking Since the First and Second Editions software development and applications have created a richer set of examples and a deeper understanding of how to perform distributed hydrologic analysis and prediction This Third Edition describes the development of geospatial data for use in Vflo physics based distributed modeling

environment Modelling plays an important role in this by helping our understanding of the environment and by forecasting likely impacts In recent years moves have been made to link models to Geographical Information Systems to provide a means of analysing changes over an area as well as over time GIS and Environmental Modeling explores the progress made to date in integrating these two software systems Approaches to the subject are made from theoretical technical as well as data stand points The existing capabilities of current systems are described along with important issues of data availability accuracy and error Various case studies illustrate this and highlight the common concepts and issues that exist between researchers in different environmental fields The future needs and prospects for integrating GIS and environmental models are also explored with developments in both data handling and modelling discussed The book brings together the knowledge and experience of over 100 researchers from academic commercial and government backgrounds who work in a wide range of disciplines The themes followed in the text provide a fund of knowledge and guidance for those involved in environmental modelling and GIS The book is easily accessible for readers with a basic GIS knowledge and the ideas and results of the research are clearly illustrated with both colour and black and white graphics

Michael Bishop, John F. Schroder, 2004-06-30 From the reviews Bishop and Schroder both Univ of Nebraska at Omaha have brought together an impressive group of practitioners in the relatively new application of geographic information science to mountain geomorphology In doing so they have produced valuable first overall coverage of a high tech approach to mountain three dimensional research More than 40 contributing authors discuss a wide range of related aspects The book is well

bound and well produced each chapter provides an extensive source of references The numerous line drawings are clearly reproduced although the mediocre quality of photographic reproduction limits the value of air photographs and satellite images As is characteristic of many edited collections there is some variation in chapter quality Some of the writing is so dense that it requires minute concentration one chapter for instance has 14 pages of references from a total of 43 pages Nevertheless this is a vital compendium for a rapidly expanding field of research Summing Up Recommended Upper division undergraduates through professionals J D Ives Choice March 2005

GIS and Geocomputation for Water Resource Science and Engineering Barnali Dixon, Venkatesh Uddameri, 2016-02-08 GIS and Geocomputation for Water Resource Science and Engineering not only provides a comprehensive introduction to the fundamentals of geographic information systems but also demonstrates how GIS and mathematical models can be integrated to develop spatial decision support systems to support water resources planning management and engineering The book uses a hands on active learning approach to introduce fundamental concepts and numerous case studies are provided to reinforce learning and demonstrate practical aspects The benefits and challenges of using GIS in environmental and water resources fields are clearly tackled in this book demonstrating how these technologies can be used to harness increasingly available digital data to develop spatially oriented sustainable solutions In addition to providing a strong grounding on fundamentals the book also demonstrates how GIS can be combined with traditional physics based and statistical models as well as information theoretic tools like neural networks and fuzzy set theory

Coping with Floods Giuseppe Rossi, Nilgun B. Harmanciogamalu, V. Yevjevich, 2012-12-06 Floods are natural hazards whose effects can deeply affect the economic and environmental equilibria of a region Quality of life of people living in areas close to rivers depends on both the risk that a flood would occur and the reliability of flood forecast warning and control systems Tools for forecasting and mitigating floods have been developed through research in the recent past Two innovations currently influence flood hazard mitigation after many decades of lack of significant progress they are the development of new technologies for real time flood forecast and warning based on weather radars and satellites and a shift from structural to non structural flood control measures due to increased awareness of the importance of protecting the environment and the adverse impacts of hydraulic works on it This book is a review of research progress booked in the improvements of forecast capability and the control of floods Mostly the book presents the results of recent research in hydrology modern techniques of real time forecast and warning and ways of controlling floods for smaller impacts on the environment A number of case studies of floods in different geographical areas are also presented Scientists
