**Glacier National Park** George Bristol, 2017-07-05 Bristol takes readers on a journey through the history of Glacier National Park beginning over a billion years ago from the formation of the Belt Sea to the present day climate changing extinction of the very glaciers that sculpted most of the wonders of its landscapes He delves into the ways in which this area of Montana seemed to have been preparing itself for the coming of humankind through a series of landmass adjustments like the Lewis Overthrust and the ice ages that came and went First there were tribes of Native Americans whose deep regard for nature left the landscape intact They were followed by Euro American explorers and settlers who may have been awed by the new lands but began to move wildlife to near extinction Fortunately for the area that would become Glacier some began to recognize that laying siege to nature and its bounties would lead to wastelands Bristol recounts how a renewed conservation ethic fostered by such leaders as Emerson Thoreau Olmstead Muir and Teddy Roosevelt took hold Their disciples were Grinnell Hill Mather Albright and Franklin Roosevelt and they would not only take up the call but rally for the cause These giants would create and preserve a park landscape to accommodate visitors and wilderness alike

en mathématiques la cohomologie galoisienne est l'étude de l'action d'un groupe de galois sur certains groupes par des méthodes cohomologiques elle permet d'obtenir des résultats à la fois sur le groupe de galois agissant et sur le groupe sur lequel il agit en particulier le groupe de galois d'une extension de corps de nombres  $L/K$  agit naturellement par exemple sur le groupe multiplicatif  $L^\times$  mais aussi sur le groupe des unités de l'anneau des entiers du corps  $L$  ou sur son *galois cohomology wikipedia* - Aug 14 2023

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group  $G$  associated to a field extension  $L/K$  acts in a natural way on some abelian groups for example those constructed directly from  $L$  but also through other galois representations that may be derived by more abstract means galois cohomology accounts for the way in which taking galois invariant elements fails
