Global Environmental Governance Technology Politics:

Global Environmental Governance, Technology and Politics Victor Galaz, 2014-04-25 We live on an increasingly human dominated planet Our impact on the Earth has become so huge that researchers now suggest that it merits its own geological epoch the Anthropocene the age of humans Combining theory development and case s **Global Environmental Governance, Technology and Politics** Víctor Galaz, 2014 Global Environmental Governance, Technology and Politics Victor Galaz, 2014 This book shows clearly why shifts in power and governance must be core to our responses but also that new creative multi scale approaches are needed Candid reflective and richly illustrated this is a must read contribution to the debate of our age about how to build sustainable futures Melissa Leach Institute of Development Studies Sussex UK The planetary boundaries concept has generated wide discussion and debate from the research community through to the institution and governance communities that seek to implement the concept This book fills a very important gap in the discourse It integrates the basic science that underpins the concept and the innovative approaches that governance researchers and practitioners are applying to put planetary boundaries into practice **Encyclopedia of Global Environmental Governance and Politics** Philipp H. Pattberg, Fariborz Zelli, 2015-11-27 The Encyclopedia of Global Environmental Governance and Politics surveys the broad range of environmental and sustainability challenges in the emerging Anthropocene and scrutinizes available concepts methodological tools theories and approaches as well as overlaps with adjunct fields of study This comprehensive reference work written by some of the most eminent academics in the field contains 68 entries on numerous aspects across 7 thematic areas including concepts and definitions theories and methods actors institutions issue areas cross cutting questions and overlaps with non environmental fields With this broad approach the volume seeks to provide a pluralistic knowledge base of the research and practice of global environmental governance and politics in times of increased complexity and contestation Providing its readers with a unique point of reference as well as stimulus for further research this Encyclopedia is an indispensable tool for anyone interested in the politics of the environment particularly students teachers and researchers **Earthly Politics** Sheila Jasanoff, Marybeth Martello, 2004-03-19 Globalization today is as much a problem for international harmony as it is a necessary condition of living together on our planet Increasing interconnectedness in ecology economy technology and politics has brought nations and societies into even closer contact creating acute demands for cooperation Earthly Politics argues that in the coming decades global governance will have to accommodate differences even as it obliterates distance and will have to respect many aspects of the local while developing institutions that transcend localism This book analyzes a variety of environmental governance approaches that balance the local and the global in order to encourage new more flexible frameworks of global governance On the theoretical level it draws on insights from the field of science and technology studies to enrich our understanding of environmental development politics On the pragmatic level it discusses the design of institutions and

processes to address problems of environmental governance that increasingly refuse to remain within national boundaries. The cases in the book display the crucial relationship between knowledge and power, the links between the ways we understand environmental problems and the ways we manage them and illustrate the different paths by which knowledge power formations are arrived at, contested, defended or set aside. By examining how local and global actors ranging from the World Bank to the Makah tribe in the Pacific Northwest respond to the contradictions of globalization, the authors identify some of the conditions for creating more effective engagement between the global and the local in environmental governance.

Global Environmental Governance and Small States Michelle Scobie, 2019. Global Environmental Governance gives the perspectives of small states on some of the most important issues of the anthropocene from trade, climate change and energy security to tourism, marine governance and heritage. Providing an in-depth analysis of global environmental governance and its impact on Caribbean small island developing states (SIDS), Michelle Scobie explores which dynamics and contexts influence current policy and future environmental outcomes for one of the most biodiverse regions of the planet.

Handbook of Global Environmental Politics Peter Dauvergne, 2012-01-01. The second edition of this Handbook contains more than 30 new and original articles as well as six essential updates by leading scholars of global environmental politics. This landmark book maps the latest theoretical and empirical research in this energetic and growing field. Captured here are the pioneering and lively debates over concerns for the health of the planet and how they might best be addressed. The introduction explores the intellectual trends and evolving parameters in the field of global environmental politics. It makes a case for an expansive definition of the field, one that embraces an interdisciplinary literature on the connections between global politics and environmental change. The remaining chapters are divided into four broad themes: states and cooperation, global governance, the political economy of governance and knowledge and ethics, with each section covering key emerging issues. In-depth explorations are given to topics such as climate change, multinational corporations, international agreements and UN organizations, regulations and business standards, trade and international finance, multilevel and transnational governance and ecological citizenship. Handbook of Global Environmental Politics Second Edition is a comprehensive review of the field and offers cutting-edge ideas for further research. As such, scholars, students and policymakers will find themselves looking to it for many years to come.

Global Environmental Politics Jean-Frédéric Morin, Amandine Orsini, Sikina Jinnah, 2020. Global Environmental Politics provides a fully up-to-date and comprehensive introduction to the most important issues dominating this fast-moving field. Going beyond the issue of climate change, the textbook also introduces students to the pressing issues of desertification, trade in hazardous waste, biodiversity protection, whaling, acid rain, ozone depletion, water consumption and overfishing. Importantly, the authors pay particular attention to the interactions between environmental politics and other governance issues such as gender, trade, development, health, agriculture and security.

Ecomodernism: Technology, Politics and The Climate Crisis Jonathan Symons, 2019-07-09. Is climate

catastrophe inevitable In a world of extreme inequality rising nationalism and mounting carbon emissions the future looks gloomy Yet one group of environmentalists the ecomodernists are optimistic They argue that technological innovation and universal human development hold the keys to an ecologically vibrant future However this perspective which advocates fighting climate change with all available technologies including nuclear power synthetic biology and others not yet invented is deeply controversial because it rejects the Green movement's calls for greater harmony with nature In this book Jonathan Symons offers a qualified defence of the ecomodernist vision Ecomodernism he explains is neither as radical or reactionary as its critics claim but belongs in the social democratic tradition promoting a third way between laissez faire and anti capitalism Critiquing and extending ecomodernist ideas Symons argues that states should defend against climate threats through transformative investments in technological innovation A good Anthropocene is still possible but only if we double down on science and humanism to push beyond the limits to growth

Routledge Handbook of Global Environmental Politics Paul G. Harris, 2013-10-15 This handbook provides a comprehensive and authoritative survey of Global Environmental Politics It brings together leading international academic experts and features 40 chapters that Describe the history of global environmental politics as a discipline and explain the various theories and perspectives used by scholars and students to understand it Examine the key actors and institutions in global environmental politics explaining the role of states international organizations regimes international law foreign policy institutions domestic politics corporations and transnational actors Address the ideas and themes shaping the practice and study of global environmental politics including sustainability consumption expertise uncertainty security diplomacy North South relations globalisation justice ethics participation and citizenship Assess the key issues and policies within global environmental politics including energy climate change ozone depletion air pollution acid rain sustainable transport persistent organic pollutants hazardous wastes water rivers wetlands oceans fisheries marine mammals biodiversity migratory species natural heritage forests desertification food and agriculture With an in depth new preface by the Editor this edition of the handbook is an invaluable resource for students scholars researchers and practitioners of environmental politics environmental studies environmental science geography international relations and political science

Critical Environmental Politics Carl Death, 2013-12-04 The aim of this book is to review central concepts in the study of environmental politics and to open up new questions problems and research agendas in the field The volume does so by drawing on a wide range of approaches from critical theory to poststructuralism and spanning disciplines including international relations geography sociology history philosophy anthropology and political science The 28 chapters cover a range of global and local studies illustrations and cases These range from the Cochabamba conference in Bolivia to climate camps in the UK UN summits in Rio de Janeiro and Johannesburg to climate migrants from Pacific islands forests in Indonesia to Dutch energy governance reform indigenous communities in Namibia to oil extraction in the Niger Delta survivalist militias in the USA to Maasai tribesmen in Kenya

Rather than following a regional or issue based e.g. water, forests, pollution etc. structure, the volume is organised in terms of key concepts in the field including those which have been central to the social sciences for a long time such as citizenship, commodification, consumption, feminism, justice, movements, science, security, the state, summits and technology, those which have been at the heart of environmental politics for many years including biodiversity, climate change, conservation, eco-centrism, limits, localism, resources, sacrifice and sustainability, and many which have been introduced to these literatures and debates more recently: biopolitics, governance, governmentality, hybridity, posthumanism, risk and vulnerability. Features and benefits of the book: Explains the most important concepts and theories in environmental politics; Reviews the core ideas behind crucial debates in environmental politics; Highlights the key thinkers both classic and contemporary for studying environmental politics; Provides original perspectives on the critical potential of the concepts for future research agendas as well as for the practice of environmental politics. Each chapter is written by leading international authors in their field. This exciting new volume will be essential textbook reading for all students of environmental politics as well as provocatively presenting the field in a different light for more established researchers.

A Research Agenda for Global Environmental Politics Peter Dauvergne, Justin Alger, 2018-09-28. In a world confronted with escalating environmental crises, academics asking the right questions and advocating the best solutions. This Research Agenda paves the way for new and established scholars in the field, identifying the significant gaps in research and emerging issues for future generations in global environmental politics.

Environmentalism of the Rich Peter Dauvergne, 2018-02-09. What it means for global sustainability when environmentalism is dominated by the concerns of the affluent: eco-business, eco-consumption, wilderness preservation. Over the last fifty years, environmentalism has emerged as a clear counterforce to the environmental destruction caused by industrialization, colonialism and globalization. Activists and policymakers have fought hard to make the earth a better place to live. But has the environmental movement actually brought about meaningful progress toward global sustainability? Signs of global unsustainability are everywhere, from decreasing biodiversity to scarcity of fresh water to steadily rising greenhouse gas emissions. Meanwhile, as Peter Dauvergne points out in this provocative book, the environmental movement is increasingly dominated by the environmentalism of the rich, diverted into eco-business, eco-consumption, wilderness preservation, energy efficiency and recycling. While it's good that, for example, Barbie dolls' packaging no longer depletes Indonesian rainforest and that Toyota Highlanders are available as hybrids, none of this gets at the source of the current sustainability crisis. More eco-products can just mean more corporate profits, consumption and waste. Dauvergne examines extraction booms that leave developing countries poor and environmentally devastated, with the ruination of the South Pacific island of Nauru as a case in point, the struggles against consumption inequities of courageous activists like Bruno Manser who worked with indigenous people to try to save the rainforests of Borneo, and the manufacturing of vast markets for nondurable goods, for example, convincing parents in China that disposable diapers made

for healthier and smarter babies Dauvergne reveals why a global political economy of ever more more growth more sales more consumption is swamping environmental gains Environmentalism of the rich does little to bring about the sweeping institutional change necessary to make progress toward global sustainability Global Environmental Politics Johannes Urpelainen, 2022-07-29 Emerging economies have fundamentally transformed global environmental politics Led by China and India they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western led initiatives neglect their needs What does the global environmental policy landscape look like in the age of a rising Global South This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes However he argues despite barriers to cooperation innovative bargaining and institutional design offer a way forward Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments The book features detailed discussions of attempts to address hazardous chemicals loss of biodiversity and climate change a comparative analysis of China and India and case studies of nine other emerging economies around the world **Global Environmental Politics** is an essential forward looking overview of today s most pressing international issue **Global Environmental Politics** Gareth Porter, 1991 Essays discuss environmental issues interest groups security and trade considerations and future approaches to environmental policy **Epistemic Communities, Constructivism, and International Environmental Politics** Peter Haas, 2015-08-20 Epistemic Communities Constructivism and International Environmental Politics brings together 25 years of publications by Peter M Haas The book examines how the world has changed significantly over the last 100 years discusses the need for new constructivist scholarship to understand the dynamics of world politics and highlights the role played by transnational networks of professional experts in global governance Combining an intellectual history of epistemic communities with theoretical arguments and empirical studies of global environmental conferences as well as international organizations and comparative studies of international environmental regimes this book presents a broad picture of social learning on the global scale In addition to detailing the changes in the international system since the Industrial Revolution Haas discusses the technical nature of global environmental threats Providing a critical reading of discourses about environmental security this book explores governance efforts to deal with global climate change international pollution control stratospheric ozone and European acid rain With a new general introduction and the addition of introductory pieces for each section this collection offers a retrospective overview of the author s work and is essential reading for students and scholars of environmental politics international
