

Global energy demand to 2030

Technical advances in efficiency and renewables critical, yet oil and gas will continue to supply about 60% of the world's energy needs

Primary energy

Quadrillion BTUs

- Economic progress driving global energy demand
- Oil and natural gas are indispensable
- Requirements to meet rising demand:
 - Expand supply
 - Increase efficiency
 - Technology mitigate emissions
 - Huge investment

Global Energy Dilemmas Mike Bradshaw, 2013-11-20 Today's global energy system faces two major challenges how to secure the supply of reliable and affordable energy and how to rapidly transform to a low carbon efficient and environmentally harmless energy supply In this rigorous and illuminating book Michael Bradshaw explores the key aspects of the current global energy dilemma and examines how it is playing out across the major regions and countries of the world The book begins by charting the development of the current global energy system exploring its key characteristics with a focus upon energy security and the relationship between energy economic development and climate change The next four chapters offer in depth analyses of four distinct global energy dilemmas in different parts of the world the challenge of sustaining affluence and decarbonising energy services in the high energy economies of the developed world the legacies of the centrally planned economy and the consequences of liberalisation in the post socialist world growing energy demand and emissions growth associated with the emerging regions and finally the quest to provide universal access to modern energy services in the developing world in a manner that is both economically and environmentally sustainable Identifying the governance structures and policy options available to tackle the global energy dilemma the book concludes that only an integrated approach sensitive to regional issues can reconcile the interests and needs of those facing differing energy challenges across the world today

[The Routledge Handbook of Urbanization and Global Environmental Change](#) Karen

Seto, William Solecki, Corrie Griffith, 2015-12-22 This volume provides a comprehensive overview of the interactions and feedbacks between urbanization and global environmental change A key focus is the examination of how urbanization influences global environmental change and how global environmental change in turn influences urbanization processes It has four thematic foci Theme 1 addresses the pathways through which urbanization drives global environmental change Theme 2 addresses the pathways through which global environmental change affects the urban system Theme 3 addresses the interactions and responses within the urban system in response to global environmental change Theme 4 centers on critical emerging research *Science Concerning Global Climate Change* United States. Congress. Senate. Committee on Energy and Natural Resources, 1994 Distributed to some depository libraries in microfiche **The Economics of Global Climatic Change** P M Rao, 2016-07-01 This study integrates scientific findings about the Global Warming Potential GWP for example the roles of pollution population growth agricultural development and sustainable resources with advances in economic theory and methods so as to explain how and why climate and economy are complementary at the local national and global levels The primary purpose of this work is to provide analytical bases for the creation of pragmatic ecology environment economy policies rather than to overwhelm the reader with technical processing that does not offer any comprehensive examination of the effects of the economy upon the environment and vice versa Modelling and data processing are treated as secondary requirements and follow rather than precede the framework developed in this book

Climate Change Chip Fletcher, 2018-10-30 This book introduces climate change fundamentals and essential concepts that reveal the extent of the damage the impacts felt around the globe and the innovation and leadership it will take to bring an end to the status quo Emphasizing peer reviewed literature this text details the impact of climate change on land and sea the water cycle human communities the weather and humanity s collective future Coverage of greenhouse gases oceanic and atmospheric processes Pleistocene and Holocene paleoclimate sea levels and other fundamental topics provide a deep understanding of key mechanisms while discussion of extreme weather economic impacts and resource scarcity reveals how climate change is already impacting people s lives and will continue to do so at an increasing rate for the foreseeable future

Global Environmental Change National Research Council, Policy Division, Board on Sustainable Development, Committee on Global Change Research, 1999-10-14 How can we understand and rise to the environmental challenges of global change One clear answer is to understand the science of global change not solely in terms of the processes that control changes in climate and the composition of the atmosphere but in how ecosystems and human society interact with these changes In the last two decades of the twentieth century a number of such research efforts supported by computer and satellite technology have been launched Yet many opportunities for integration remain unexploited and many fundamental questions remain about the earth s capacity to support a growing human population This volume encourages a renewed commitment to understanding global change and sets a direction for research in the decade ahead Through case studies the book explores

what can be learned from the lessons of the past 20 years and what are the outstanding scientific questions Highlights include Research imperatives and strategies for investigators in the areas of atmospheric chemistry climate ecosystem studies and human dimensions of global change The context of climate change including lessons to be gleaned from paleoclimatology Human responses to and forcing of projected global change This book offers a comprehensive overview of global change research to date and provides a framework for answering urgent questions **Green Energy to**

Charcoal, Food, and Water Production in the Tropics: Applying Nexus Thinking to Improve Research and Policy Approaches in Complex Landscapes Tuyeni Heita Mwampamba, Adrian Ghilardi, Rob

Bailis, 2020-02-04 Editorial Tuyeni H Mwampamba Rob Bailis Adrian Ghilardi Urbanization food and water consumption trends in many tropical countries show that demand for charcoal as a source of cooking energy meat grain and water will rise to proportions that surpass the ability of existing ecosystems to supply these services simultaneously and at desired qualities Consequently drastic changes to policy and practice are needed to improve ecosystem potential and or alter demand trends Traditional charcoal production in sub Saharan Africa South East Asia and Latin America often competes or co exists with livestock keeping and agriculture and has a tendency to occur in water limited woodlands The co occurrence of charcoal and food production results in complex landscapes characterized by strong interactions between subsystems managed by multiple sets of actors with potentially competing objectives These social ecological systems provide goods and services that are essential to millions of people throughout the global south Nevertheless there have been very few detailed studies of such systems particularly on the individual and combined effects of charcoal crop and livestock production on the hydrological system that maintains them and vice versa As a result these multi use landscapes are typically managed by short sighted highly generalized mono sectorial policies that ignore important tradeoffs and undercapitalize on synergies A system level approach could provide important insights that improve and expand current understanding of this energy food water nexus Tackling urgent and complex problems composed of multiple and interrelated factors lies at the heart of nexus thinking an approach that examines the inter relatedness and interdependencies of environmental resources and their transitions and fluxes across spatial scales and between compartments UNU FLORES 2015 and relies on interdisciplinary research and multi sector policy teams It has attracted significant interest from international organizations the private sector and governments as a way to develop integrated equitable solutions that involve inputs from multiple stakeholders However this approach is notably absent in the research arena Identifying appropriate interventions for achieving sustainable charcoal and food production and maintaining the underlying hydrological system on which they depend requires that the systems are considered simultaneously and that their biophysical social and political inter relations are well understood Taking charcoal

as the nexus entry point this Research Topic aims to generate new understanding of charcoal production systems by incorporating agriculture and hydrology into the matrix We were interested in empirical articles reviews meta analytical articles and perspective papers that address at least two of the three nexus components and which offer provocative and insightful perspectives into the nexus as a whole We hope that this Research Topic will 1 facilitate identification of research gaps policy opportunities and priorities for the nexus 2 kick start the development of a community of researchers and practitioners working on the nexus and 3 permit the development of a research agenda that explores the nexus globally across multiple study sites

The Oxford Handbook of Climate Change and Society John S. Dryzek,Richard B. Norgaard,David Schlosberg,2011-08-18 Climate change presents perhaps the most profound challenge ever confronted by human society This volume is a definitive analysis drawing on the best thinking on questions of how climate change affects human systems and how societies can do and should respond Key topics covered include the history of the issues social and political reception of climate science the denial of that science by individuals and organized interests the nature of the social disruptions caused by climate change the economics of those disruptions and possible responses to them questions of human security and social justice obligations to future generations policy instruments for reducing greenhouse gas emissions and governance at local regional national international and global levels

Global Environmental Politics Johannes Urpelainen,2022-07-29 Emerging economies have fundamentally transformed global environmental politics Led by China and India they increasingly make or break international negotiations which now require agreement among a large number of governments with widely varied preferences Emerging economies which still suffer from widespread poverty and frequently struggle with policy implementation often feel that Western led initiatives neglect their needs What does the global environmental policy landscape look like in the age of a rising Global South This book explains why emerging economies have come to dominate global environmental politics and examines the implications for future international cooperation Johannes Urpelainen shows that emerging economies continue to prioritize economic growth and often have limited institutional capacity to contain the environmental destruction that it causes However he argues despite barriers to cooperation innovative bargaining and institutional design offer a way forward Bottom up agreements that respect national sovereignty and invest in capacity building hold more promise than traditional top down treaties with binding commitments The book features detailed discussions of attempts to address hazardous chemicals loss of biodiversity and climate change a comparative analysis of

China and India and case studies of nine other emerging economies around the world Global Environmental Politics is an essential forward looking overview of today s most pressing international issue
