*Health of People, Health of Planet and Our Responsibility* Wael Al-Delaimy, Veerabhadran Ramanathan, Marcelo Sánchez Sorondo, 2020-05-13 This open access book not only describes the challenges of climate disruption but also presents solutions The challenges described include air pollution climate change extreme weather and related health impacts that range from heat stress vector borne diseases food and water insecurity and chronic diseases to malnutrition and mental well being The influence of humans on climate change has been established through extensive published evidence and reports However the connections

between climate change the health of the planet and the impact on human health have not received the same level of attention Therefore the global focus on the public health impacts of climate change is a relatively recent area of interest This focus is timely since scientists have concluded that changes in climate have led to new weather extremes such as floods storms heat waves droughts and fires in turn leading to more than 600 000 deaths and the displacement of nearly 4 billion people in the last 20 years Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on multidisciplinary multi faceted collaborations between physical scientists public health researchers and policy makers Further there was little attention paid to faith based and ethical approaches to the problem The solutions and actions we explore in this book engage diverse sectors of civil society faith leadership and political leadership all oriented by ethics advocacy and policy with a special focus on poor and vulnerable populations The book highlights areas we think will resonate broadly with the public faith leaders researchers and students across disciplines including the humanities and policy makers

Climate Change and Global Public Health Kent E. Pinkerton, William N. Rom, 2020-11-23 This book is a guide to the research findings and discussions of US and international experts on climate change and respiratory health Since the publication of the first edition climate change has been increasingly acknowledged as being directly related to the prevalence and incidence of respiratory morbidity Evidence is increasing that climate change does drive respiratory disease onset and exacerbation as a result of increased ambient and indoor air pollution desertification heat stress wildfires and the geographic and temporal spread of pollens molds and infectious agents This second edition is fully updated to include the latest research by international experts on topics such as heat waves causing critical care related diseases climate driven air pollution increases and high level ozone and ozone exposure linked to idiopathic pulmonary fibrosis lung cancer and acute lower respiratory infection Seven new chapters have also been added on extreme weather and

agricultural safety in California desert dust effects on lung health climate policy and the EPA California's integrated approach to air quality and climate change integrating climate change the environment and sustainability themes into professional health science courses and the role of the physician as climate advocate This is an ideal guide for all pulmonologists and health professionals treating patients with pulmonary disease *Global Climate Change and Public Health* Kent E. Pinkerton, William N. Rom, 2013-09-28 Pulmonary physicians and scientists currently have minimal capacity to respond to climate change and its impacts on health The extent to which climate change influences the prevalence and incidence of respiratory morbidity remains largely undefined However evidence is increasing that climate change does drive respiratory disease onset and exacerbation as a result of increased ambient and indoor air pollution desertification heat stress wildfires and the geographic and temporal spread of pollens molds and infectious agents Preliminary research has revealed climate change to have potentially direct and indirect adverse impacts on respiratory health Published studies have linked climate change to increases in respiratory disease including the following changing pollen releases impacting asthma and allergic rhinitis heat waves causing critical care related diseases climate driven air pollution increases exacerbating asthma and COPD desertification increasing particulate matter PM exposures and climate related changes in food and water security impacting infectious respiratory disease through malnutrition pneumonia upper respiratory infections High level ozone and ozone exposure has been linked to idiopathic pulmonary fibrosis lung cancer and acute lower respiratory infection *Global Climate Change and Public Health* is an important new volume based on the research findings and discussions of US and international experts on respiratory health and climate change This volume addresses issues of major importance to respiratory health and fills a major gap in the current literature The ATS Climate Change and Respiratory Health Workshop was held in New Orleans Louisiana on May 15 2010 The purpose of the meeting was to address the threat to global respiratory health posed by climate change The workshop was attended by domestic and international experts as well as representatives of international respiratory societies and key US federal agencies Dr Pinkerton and Dr Rom the editors of this title were co chairs of the Climate Change Workshop and Symposium **Encyclopedia of global warming and climate change** S.
