Schweizer,2022-09-23 This book compares premetered methods to self metered processes and addresses general properties of premetered methods It presents specific properties of slot slide and curtain coating The book is divided in three parts Part

It compares premetered methods to self metered processes. It explains the term premetered which is an expression of the law of mass conservation and discusses the physical fluid properties that are relevant for premetered processes. Furthermore it presents in detail the various basic flow fields that make up premetered coating methods. Lastly it introduces the concepts of wall shear stress, residence time and hydrodynamic assist to dynamic wetting. Part II addresses general properties of premetered methods such as the fluid conditioning and delivery systems, the nominal film thickness and the film thickness uniformity both in machine and cross web directions, die design. It lists the attractive features of simultaneous multilayer applications including an explanation of how mixing of adjacent layers can be prevented. This section concludes by revisiting examples of economic considerations. Part III presents specific properties of slot die and curtain coating. It examines various topics such as coating equipment and coating configurations, coating modes, details of the various flow fields, operating window and process limitations and process optimization.

Suitable for independent study or as a complement to a traditional lecture based course. Adopts a programmed learning format with a focus on student centred learning. Contains many examples, carefully constructed questions and graded practical problems allowing the reader to work at their own pace and assess their progress whilst gaining confidence in their ability to apply the principles of Structural Mechanics. Now covering the major part of the Structural Mechanics Analysis syllabuses of most Civil Engineering degree courses up to second year level.

Fundamentals of Structural Analysis, 2nd Edition Roy, Sujit Kumar & Chakrabarty Subrata, 2003. For B E B Tech in Civil Engineering and also useful for M E M Tech students. The book takes an integral look at structural engineering starting with fundamentals and ending with computer analysis. This book is suitable for 5th, 6th and 7th semesters of undergraduate course. In this edition a new chapter on plastic analysis has been added. A large number of examples have been worked out in the book so that students can master the subject by practising the examples and problems.
