Routledge Handbook of Global Economic History Francesco Boldizzoni, Pat Hudson, 2015-12-22 The Routledge Handbook of Global Economic History documents and interprets the development of economic history as a global discipline from the later nineteenth century to the present day Exploring the normative and relativistic nature of different schools and traditions of thought this handbook not only examines current paradigmatic western approaches but also those conceived in less open societies and in varied economic political and cultural contexts In doing so this book clears the way for greater critical understanding and a more genuinely global approach to economic history This handbook brings together leading international contributors in order to systematically address cultural and intellectual traditions around the globe Many of these are exposed for consideration for the first time in English The chapters explore dominant ideas and historiographical trends and open them up to critical transnational perspectives This volume is essential reading for both academics and students in economic and social history As this field of study is very much a bridge between the social sciences and humanities the issues examined in the book will also have relevance for those seeking to understand the evolution of other academic disciplines under the pressures of varied economic political and cultural circumstances on both national and global scales

LA FUERZA DEL CORAZÓN ORANTE Emilio Mazariegos, **The Social Metabolism of Spanish Agriculture, 1900-2008** Manuel González de Molina, David Soto Fernández, Gloria Guzmán Casado, Juan Infante-Amate, Eduardo Aguilera Fernández, Jaime Vila Traver, Roberto García Ruiz, 2019-11-12 This open access book provides a panoramic view of the evolution of Spanish agriculture from 1900 to the present offering a more diverse picture to the complex and multidimensional reality of agrarian production With a clear transdisciplinary ambition the book applies an original and innovative theoretical and methodological tool termed Agrarian Social Metabolism combining Social Metabolism with an agroecological perspective This integrative analysis is especially interesting for environmental scientists and policy makers being the best way to design sustainable agroecosystems and public policies capable of moving us towards a more sustainable food system Spanish agricultural production has experienced impressive growth during the 20th century which has allowed it to ensure the supply of food to the population and even to transform some crops into important chapters in foreign trade However this growth has had its negative side since it was based on the injection of large amounts of external energy on the destruction of employment and the loss of profitability of agricultural activity But perhaps the most serious part is the strong impact of the current industrialised agriculture model on Spanish agroecosystems exposed to the overexploitation of hydric resources pollution of the water by nitrates and pesticides high erosion rates and an alarming loss of biodiversity damage which in the immediate future will end up reducing production capacity
