### Updating Firmware Using FTP

You can directly connect to the Dell FTP site or any other FTP site from iDRAC to perform the firmware updates. You can use the Windows based update packages (DUPs) and a catalog file available on the FTP site instead of creating custom repositories.

Before performing an update using the repository, make sure that:

- Lifecycle Controller is enabled.
- You have Server Control privilege to update firmware for devices other than iDRAC.

To update device firmware using FTP:

1. In the iDRAC Web interface, go to **Overview** → **iDRAC Settings** → **Update and Rollback** . The **Firmware Update** page is displayed.
2. On the **Update** tab, select **FTP** as the **File Location**.
3. In the **FTP Server Settings** section, enter the FTP details.  
For information about the fields, see the iDRAC Online Help.
4. Click **Check for Update**.
5. After the upload is complete, the **Update Details** section displays a comparison report showing the current firmware versions and the firmware versions available in the repository.  
 **NOTE:** Any update in the repository that is not applicable to the system or the installed hardware or is not supported is not included in the comparison report.
6. Select the required updates and do one of the following:
  - For firmware images that do not require a host system reboot, click **Install**. For example, .d7 firmware file.
  - For firmware images that require a host system reboot, click **Install and Reboot** or **Install Next Reboot**.
  - To cancel the firmware update, click **Cancel**.

When you click **Install**, **Install and Reboot** or **Install Next Reboot**, the message *Updating Job Queue* is displayed.

7. Click **Job Queue** to display the **Job Queue** page, where you can view and manage the staged firmware updates or click **OK** to refresh the current page and view the status of the firmware update.
