- 1.1** The four elements are cash flows, time of occurrence of cash flows, interest rates, and measure of economic worth.
- 1.2** (a) Capital funds are money used to finance projects. It is usually limited in the amount of money available.
- (b) Sensitivity analysis is a procedure that involves changing various estimates to see if/how they affect the economic decision.
- 1.3** Any of the following are measures of worth: present worth, future worth, annual worth, rate of return, benefit/cost ratio, capitalized cost, payback period, economic value added.
- 1.4** First cost: *economic*; leadership: *non-economic*; taxes: *economic*; salvage value: *economic*; morale: *non-economic*; dependability: *non-economic*; inflation: *economic*; profit: *economic*; acceptance: *non-economic*; ethics: *non-economic*; interest rate: *economic*.
- 1.5** Many sections could be identified. Some are: I.b; II.2.a and b; III.9.a and b.
- 1.6** Example actions are:
- Try to talk them out of doing it now, explaining it is stealing
  - Try to get them to pay for their drinks
  - Pay for all the drinks himself
  - Walk away and not associate with them again
- 1.7** *This is structured to be a discussion question; many responses are acceptable.* It is an ethical question, but also a guilt-related situation. He can justify the result as an accident; he can feel justified by the legal fault and punishment he receives; he can get angry because it WAS an accident; he can become tormented over time due to the stress caused by accidentally causing a child's death.
- 1.8** *This is structured to be a discussion question; many responses are acceptable.* Responses can vary from the ethical (stating the truth and accepting the consequences) to unethical (continuing to deceive himself and the instructor and devise some on-the-spot excuse).
- Lessons can be learned from the experience. A few of them are:
- Think before he cheats again.
  - Think about the longer-term consequences of unethical decisions.
  - Face ethical-dilemma situations honestly and make better decisions in real time.

**Introduction to Optimum Design** Jasbir Singh Arora, 2004-06-02 Optimization is a mathematical tool developed in the early 1960 s used to find the most efficient and feasible solutions to an engineering problem It can be used to find ideal shapes and physical configurations ideal structural designs maximum energy efficiency and many other desired goals of engineering This book is intended for use in a first course on engineering design and optimization Material for the text has evolved over a period of several years and is based on classroom presentations for an undergraduate core course on the principles of design Virtually any problem for which certain parameters need to be determined to satisfy constraints can be formulated as a design optimization problem The concepts and methods described in the text are quite general and applicable to all such formulations Inasmuch the range of application of the optimum design methodology is almost limitless constrained only by the imagination and ingenuity of the user The book describes the basic concepts and techniques with only a few simple applications Once they are clearly understood they can be applied to many other advanced applications that are discussed in the text Allows engineers involved in the design process to adapt optimum design concepts in their work using the material in the text Basic concepts of optimality conditions and numerical methods are described with simple examples making the material high teachable and learnable Classroom tested for many years to attain optimum pedagogical effectiveness

**Introduction to Optimum Design** Jasbir Arora, 2011-08-17 Introduction to Optimum Design is the most widely used textbook in engineering optimization and optimum design courses It is intended for use in a first course on engineering design and optimization at the undergraduate or graduate level within engineering departments of all disciplines but primarily within mechanical aerospace and civil engineering The basic approach of the text is to describe an organized approach to engineering design optimization in a rigorous yet simplified manner illustrate various concepts and procedures with simple examples and demonstrate their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text Excel and MATLAB are featured throughout as learning and teaching aids The 3rd edition has been reorganized and enhanced with new material making the book even more appealing to instructors regardless of the level they teach the course Examples include moving the introductory chapter on Excel and MATLAB closer to the front of the book and adding an early chapter on practical design examples for the more introductory course and including a final chapter on advanced topics for the purely graduate level course Basic concepts of optimality conditions and numerical methods are described with simple and practical

examples making the material highly teachable and learnable Applications of the methods for structural mechanical aerospace and industrial engineering problems Introduction to MATLAB Optimization Toolbox Optimum design with Excel Solver has been expanded into a full chapter Practical design examples introduce students to usage of optimization methods early in the book New material on several advanced optimum design topics serves the needs of instructors teaching more advanced courses     *Books in Print* ,1981     **The Publishers' Trade List Annual** ,1980     **Scientific and Technical Books and Serials in Print** ,1984     **Subject Guide to Books in Print** ,1983     *Renewable Energy Resources* G.
