## **Engineering Trouble Biotechnology And Its Discontents:**

**Engineering Trouble** Rachel A. Schurman, Dennis D. Kelso, 2003-10-06 Talk of genetically engineered organisms GEOs has moved from the hushed corridors of life science corporations to the front pages of major newspapers This book examines these issues from the diverse perspectives of sociology geography law environmental studies and political science **The International Handbook of Environmental Sociology** M. R. Redclift, Graham Woodgate, 2010-01-01 Acclaim for the first edition The scope of the volume is vast and overall the Handbook amounts to an almost encyclopaedic reference text for scholars of environmental questions across the social sciences be they in sociology geography political science or wherever Neil Ward Environmental Politics Each author writes with a distinctive style yet the work flows well because the editors selected recognized scholars with outstanding credentials Academic libraries especially those serving a strong social science community will find this work a worthwhile addition Professors of sociology and environmental studies could use the essays for additional readings and reviews Marjorie H Jones American Reference Books This International Handbook is an important addition to the growing concern and publication in the field of environmental sociology Certainly any serious scholar in the field should find this edited reference work of interest John J Hartman International Social Science Review This thoroughly revised Handbook provides an assessment of the scope and content of environmental sociology and sets out the intellectual and practical challenges posed by the urgent need for policy and action to address accelerating environmental change More than a decade has passed since the first edition of the Handbook was published to considerable acclaim and environmental sociology has since become firmly established as a critical social science discipline This second edition is a major interdisciplinary reference work comprising more than 25 original essays authored by leading scholars many of whom are intimately involved in national regional or global environmental policy processes It marks some of the changes and continuities in the field of environmental sociology and highlights today s substantive concerns and theoretical debates The Handbook is divided into three parts covering concepts and theories critical issues and international perspectives each with an introduction outlining the content of the constituent chapters and cross referencing some of the more significant themes that link them together Authoritative and comprehensive this Handbook will prove to be essential reading for academics researchers and students across the social sciences who are interested in the environment It will also be enthusiastically received by sustainable development policy makers and practitioners **Transforming Agriculture and Foodways** David Goodman, 2024-09-10 A wave of innovation driven by the convergence of digital and molecular technologies is transforming food production and ways of eating in the US Western Europe and Australasia This book explores a range of contemporary agri food issues such as the digitalisation of farm production aka Precision Agriculture farmer independence gene editing alternative proteins and the rise of app based home food deliveries This is the first book to provide a systemic analysis of technological innovation and its socio economic consequences in modern food systems including the hollowing out of rural

communities and pronounced industrial concentration The food system is under growing public pressure to respond to global climate change but this book finds little evidence of transition to sustainable low carbon trajectories

**Food Security, Nutrition and Sustainability** Geoffrey Lawrence, Kristen Lyons, Tabatha Wallington, 2013-10-18 As the threats of food insecurity loom ever larger the world faces the sad irony of food shortages in the global South alongside a purported obesity epidemic in the global North The twin issues of food production and food access are of particular concern in the context of climate change peak oil biofuels and land grabs by wealthy nations Food Security Nutrition and Sustainability offers critical insights by international scholars with chapters on global food security supermarket power new technologies and sustainability The book also assesses the contributions of diet and nutrition research in building socially just and environmentally sustainable food systems and provides policy recommendations to improve the health and environmental status of contemporary agri food systems The book features contributions from a range of social science perspectives including sociology anthropology public health and geography with case study material drawn from throughout the world

**The Fight Over Food** Wynne Wright, Gerad Middendorf, 2010-11 One problem with the food system is that price is the bottom line rather than having the bottom line be land stewardship an appreciation for the environmental and social value of small scale family farms or for organically grown produce Interview with farmer in Skagit County Washington For much of the later twentieth century food has been abundant and convenient for most residents of advanced industrial societies The luxury of taking the safety and dependability of food for granted pushed it to the back burner in the consciousness of many Increasingly however this once taken for granted food system is coming under question on issues such as the humane treatment of animals genetically engineered foods and social and environmental justice Many consumers are no longer content with buying into the mainstream commodity driven food market on which they once depended Resistance has emerged in diverse forms from protests at the opening of McDonald s restaurants worldwide to ever greater interest in alternatives such as CSAs community supported agriculture fair trade and organic foods The food system is increasingly becoming an arena of struggle that reflects larger changes in societal values and norms as expectations are moving beyond the desire for affordable convenient foods to a need for healthy and environmentally sound alternatives In this book leading scholars and scholar activists provide case studies that illuminate the complexities and contradictions that surround the emergence of a new day in agriculture The essays found in The Fight Over Food analyze and evaluate both the theoretical and historical contexts of the agrifood system and the ways in which trends of individual action and collective activity have led to an accumulation of resistance that greatly affects the mainstream market of food production The overarching theme that integrates the case studies is the idea of human agency and the ways in which people purposefully and creatively generate new forms of action or resistance to facilitate social changes within the structure of predominant cultural norms Together these studies examine whether these combined efforts will have the strength to create significant and enduring

transformations in the food system      *Evolution Made to Order* Helen Anne, 2016-11-11 Plant breeders have long sought technologies to extend human control over nature Early in the twentieth century this led some to experiment with startlingly strange tools like x ray machines chromosome altering chemicals and radioactive elements Contemporary reports celebrated these mutation inducing methods as ways of generating variation in plants on demand Speeding up evolution they imagined would allow breeders to genetically engineer crops and flowers to order Creating a new food crop or garden flower would soon be as straightforward as innovating any other modern industrial product In *Evolution Made to Order* Helen Anne Curry traces the history of America's pursuit of tools that could intervene in evolution An immersive journey through the scientific and social worlds of midcentury genetics and plant breeding and a compelling exploration of American cultures of innovation *Evolution Made to Order* provides vital historical context for current worldwide ethical and policy debates over genetic engineering      *Frontiers of Commodity Chain Research* Jennifer Bair, 2009 Featuring new contributions by leading globalization scholars this timely volume analyzes the organization geography politics and power dynamics of international trade and production networks understood as global commodity chains      *Hybrid Nature* Daniel Schneider, 2011 A history of the industrial ecosystem that focuses on the biological sewage treatment plant as an early example Biological sewage treatment like electricity power generation telephones and mass transit has been a key technology and a major part of the urban infrastructure since the late nineteenth century But sewage treatment plants are not only a ubiquitous component of the modern city they are also ecosystems a hybrid variety that incorporates elements of both nature and industry and embodies multiple contradictions In *Hybrid Nature* Daniel Schneider offers an environmental history of the biological sewage treatment plant in the United States and England viewing it as an early and influential example of an industrial ecosystem The sewage treatment plant relies on microorganisms and other plants and animals but differs from a natural ecosystem in the extent of human intervention in its creation and management Schneider explores the relationship between society and nature in the industrial ecosystem and the contradictions that define it the naturalization of industry versus the industrialization of nature the public interest versus private patented technology engineers versus bacterial and human labor and purification versus profits in the marketing of sewage fertilizer Schneider also describes biotechnology's direct connections to the history of sewage treatment and how genetic engineering is extending the reaches of the industrial ecosystem to such natural ecosystems as oceans rivers and forests In a conclusion that shows how industrial ecosystems continue to evolve Schneider discusses John Todd's Living Machine a natural purification method of sewage treatment as the embodiment of the contradictions of the industrial ecosystem      **Science by the People** Aya H. Kimura, Abby Kinchy, 2019-09-13 Longlisted for the Fleck Prize from the Society for Social Studies of Science 4S Citizen science research involving nonprofessionals in the research process has attracted both strong enthusiasts and detractors Many environmental professionals activists and scholars consider citizen science part of their toolkit for addressing environmental challenges

Critics however contend that it represents a corporate takeover of scientific priorities In this timely book two sociologists move beyond this binary debate by analyzing the tensions and dilemmas that citizen science projects commonly face Key lessons are drawn from case studies where citizen scientists have investigated the impact of shale oil and gas nuclear power and genetically engineered crops These studies show that diverse citizen science projects face shared dilemmas relating to austerity pressures presumed boundaries between science and activism and difficulties moving between scales of environmental problems By unpacking the politics of citizen science this book aims to help people negotiate a complex political landscape and choose paths moving toward social change and environmental sustainability *Seeds, Science, and Struggle* Abby Kinchy, 2012-07-20 An examination of how advocates for alternative agriculture confront science based regulation of genetically engineered crops Genetic engineering has a wide range of cultural economic and ethical implications yet it has become almost an article of faith that regulatory decisions about biotechnology be based only on evidence of specific quantifiable risks to consider anything else is said to politicize regulation In this study of social protest against genetically engineered food Abby Kinchy turns the conventional argument on its head Rather than consider politicization of the regulatory system she takes a close look at the scientization of public debate about the contamination of crops resulting from pollen drift and seed mixing Advocates of alternative agriculture confront the scientization of this debate by calling on international experts carrying out their own research questioning regulatory science in court building alternative markets and demanding that their governments consider the social and economic impacts of the new technologies Kinchy focuses on social conflicts over canola in Canada and maize in Mexico drawing out their linkages to the global food system and international environmental governance The book ultimately demonstrates the shortcomings of dominant models of scientific risk governance which marginalize alternative visions of rural livelihoods and sustainable food production

**Soybeans and Power** Pablo Lapegna, 2016-09-21 Although Argentina's use of genetically modified GM soybean seeds has spurred a major agricultural boom it has also had a negative impact on many communities In *Soybeans and Power* Pablo Lapegna explores the ways in which these communities have coped with GM soybean expansion Peasants initially resisted yet ultimately adapted to the new agricultural technologies playing an active role in their own demobilization in order to maneuver the situation to their advantage A rare glimpse into the life cycle of a social movement *Soybeans and Power* gives voice to the communities most adversely affected by GM technology and the strategies that they have enacted in order to survive *Encyclopedia of Contemporary American Social Issues* Michael Shally-Jensen, 2010-12-22 This single source reference will help students and general readers alike understand the most critical issues facing American society today Featuring the work of almost 200 expert contributors the *Encyclopedia of Contemporary American Social Issues* comprises four volumes each devoted to a particular subject area Volume one covers business and the economy volume two criminal justice volume three family and society and volume four the environment science and technology Coverage within these

volumes ranges from biotechnology to identity theft from racial profiling to corporate governance from school choice to food safety The work brings into focus a broad array of key issues confronting American society today Approximately 225 in depth entries lay out the controversies debated in the media on campuses in government in boardrooms and in homes and neighborhoods across the United States Critical issues in criminology medicine religion commerce education the environment media family life and science are all carefully described and examined in a scholarly yet accessible way Sidebars photos charts and graphs throughout augment the entries making them even more compelling and informative

**Concentration and Power in the Food System** Philip H. Howard, 2021-09-09 Who controls what we eat This book reveals how dominant corporations from the supermarket to the seed industry exert control over contemporary food systems It analyzes the strategies these firms are using to reshape society in order to further increase their power particularly in terms of their bearing upon the more vulnerable sections of society such as recent immigrants ethnic minorities and those of lower socioeconomic status Yet this study also shows that these trends are not inevitable Opposed by numerous efforts from microbreweries to seed saving networks it explores how opposition to this has encouraged even the most powerful firms to make small but positive changes This revised edition has been updated to reflect recent developments in the food system as well as the broad political economic forces that shape them It also examines the rapidly changing technologies such as Big Data and automation which have the potential to reinforce as well as to challenge the power of the largest firms *Hanging by a Thread* William G. Moseley, Leslie C. Gray, 2008-04-01 The textile industry was one of the first manufacturing activities to become organized globally as mechanized production in Europe used cotton from the various colonies Africa the least developed of the world's major regions is now increasingly engaged in the production of this crop for the global market and debates about the pros and cons of this trend have intensified *Hanging by a Thread* Cotton Globalization and Poverty in Africa illuminates the connections between Africa and the global economy The editors offer a compelling set of linked studies that detail one aspect of the globalization process in Africa the cotton commodity chain From global policy debates to impacts on the natural environment to the economic and social implications of this process *Hanging by a Thread* explores cotton production in the postcolonial period from different disciplinary perspectives and in a range of national contexts This approach makes the globalization process palpable by detailing how changes at the macroeconomic level play out on the ground in the world's poorest region *Hanging by a Thread* offers new insights on the region in a global context and provides a critical perspective on current and future development policy for Africa Contributors Thomas J Bassett Jim Bingen Duncan Boughton Brian M Dowd Marnus Gouse Leslie C Gray Dolores Koenig Scott M Lacy William G Moseley Colin Poulton Bhavani Shankar Corinne Siaens Colin Thirtle David Tschirley and Quentin Wodon **Making Better Policies for Food Systems** OECD, 2021-01-11 Food systems around the world face a triple challenge providing food security and nutrition for a growing global population supporting livelihoods for those working along the food supply chain and contributing to environmental

sustainability Better policies hold tremendous promise for making progress in these domains      **The Graft Hybrid** Matthew Holmes,2024-04-16 The global triumph of Mendelian genetics in the twentieth century was not a foregone conclusion thanks to the existence of graft hybrids These chimeral plants and animals are created by grafting tissue from one organism to another with the goal of passing the newly hybridized genetic material on to their offspring But prevailing genetic theory insisted that heredity was confined to the sex cells and there was no inheritance of characteristics acquired during an organism s lifetime Under sustained attacks from geneticists scientific belief in the existence of graft hybrids slowly began to decline Yet ordinary horticulturalists and breeders continued to believe in the power of grafting Matthew Holmes tells the story of these organisms which include multicolored chickens and black nightshades that grew tomatoes and their enduring influence on twentieth century biology Their creators sought a goal as ambitious as the wildest dreams of genetic engineering today to smash the barriers between species and freely exchange genes between organisms The Graft Hybrid presents a greater understanding of the controversial history of graft hybrids offering a crucial intervention in the history of genetics and the future of biological science      Handbook on the Globalisation of Agriculture Guy M. Robinson,Doris A. Carson,2015-06-29 This Handbook provides insights to the ways in which globalisation is affecting the whole agri food system from farms to the consumer It covers themes including the physical basis of agriculture the influence of trade policies the nature of globalis      Necroculture Charles Thorpe,2016-06-24 In this book the author draws on Karl Marx s writings on alienation and Erich Fromm s conception of necrophilia in order to understand these aspects of contemporary culture as expressions of the domination of the living by the dead under capitalism Necroculture is the ideological reflection and material manifestation of this basic feature of capitalism the rule of dead capital over living labor The author argues that necroculture represents the subsumption of the world by vampire capital      *Agricultural Governance* Vaughan Higgins,Geoffrey Lawrence,2007-05-07 Drawing upon the expertise of some of the most prominent names in rural sociology geography and anthropology this book shows how globalization has opened up a new regulatory politics      *The Struggle for Maize* Elizabeth Fitting,2010-12-31 Argues that maize biodiversity in central and southern Mexico is threatened as much by rural out migration as by the flow of genes from genetically modified to local corn varieties
