*When the Asteroid Hits* Allen A. Debus, 2024-10-04 The incomprehensible notion of a very large chunk of ice or rock from outer space smashing into the Earth has only become mainstream within the past two centuries Though early writers imagined the utterly fantastic consequences of comet collisions and speculated on the devastation they might wreak it was not until the 1980s when scientists finally resolved that dinosaurs were extinguished by an asteroid 66 million years ago This startling announcement captivated the media and tilted the science fiction world but in reality history may have been punctuated repeatedly by such events This book collects and analyzes ideas of asteroid comet and planetary impacts with Earth spanning two centuries from the first realization of extinctions in fossil records to the new millennium reflected in scores of sci fi stories films and televised science documentaries The author examines social and geopolitical fears tied to the prospect of a cosmic borne catastrophe Science fiction and speculation are artfully melded

**Cataclysms** Michael R. Rampino, 2017-08-22 In 1980 the science world was stunned when a maverick team of researchers proposed that a massive meteor strike had wiped the dinosaurs and other fauna from the Earth 66 million years ago Scientists found evidence for this theory in a crater of doom on the Yucatán Peninsula showing that our planet had once been a target in a galactic shooting gallery In *Cataclysms* Michael R Rampino builds on the latest findings from leading geoscientists to take neocatastrophism a step further toward a richer

understanding of the science behind major planetary upheavals and extinction events Rampino recounts his conversion to the impact hypothesis describing his visits to meteor strike sites and his review of the existing geological record The new geology he outlines explicitly rejects nineteenth century uniformitarianism which casts planetary change as gradual and driven by processes we can see at work today Rampino offers a cosmic context for Earth's geologic evolution in which cataclysms from above in the form of comet and asteroid impacts and from below in the form of huge outpourings of lava in flood basalt eruptions have led to severe and even catastrophic changes to the Earth's surface This new geology sees Earth's position in our solar system and galaxy as the keys to understanding our planet's geology and history of life Rampino concludes with a controversial consideration of dark matter's potential as a triggering mechanism exploring its role in heating Earth's core and spurring massive volcanism throughout geologic time

**Galileo** Mario Livio, 2021-05-25 An intriguing and accessible Publishers Weekly interpretation of the life of Galileo Galilei one of history's greatest and most fascinating scientists that sheds new light on his discoveries and how he was challenged by science deniers We really need this story now because we're living through the next chapter of science denial Bill McKibben Galileo's story may be more relevant today than ever before At present we face enormous crises such as minimizing the dangers of climate change because the science behind these threats is erroneously questioned or ignored Galileo encountered this problem 400 years ago His discoveries based on careful observations and ingenious experiments contradicted conventional wisdom and the teachings of the church at the time Consequently in a blatant assault on freedom of thought his books were forbidden by church authorities Astrophysicist and bestselling author Mario Livio draws on his own scientific expertise and uses his gifts as a great storyteller The Washington Post to provide a refreshing perspective Booklist into how Galileo reached his bold new conclusions about the cosmos and the laws of nature A freethinker who followed the evidence wherever it led him Galileo was one of the most significant figures behind the scientific revolution He believed that every educated person should know science as well as literature and insisted on reaching the widest audience possible publishing his books in Italian rather than Latin Galileo was put on trial with his life in the balance for refusing to renounce his scientific convictions He remains a hero and inspiration to scientists and all of those who respect science which as Livio reminds us in this admirably clear and concise The Times London book remains threatened everyday

**A History of Women in Astronomy and Space Exploration** Dale DeBakcsy, 2023-05-31 For the last four hundred years women have played a part far in excess of their numerical representation in the history of astronomical research and discovery It was a woman who gave us our first tool for measuring the distances between stars and another who told us for the first time what those stars were made of It was women who first noticed the rhythmic noise of a pulsar the temperature discrepancy that announced the existence of white dwarf stars and the irregularities in galactic motion that informed us that the universe we see might be only a small part of the universe that exists And yet in spite of the magnitude of their achievements for centuries women were treated as essentially second class

citizens within the astronomical community contained in back rooms forbidden from communicating with their male colleagues provided with repetitive and menial tasks and paid starvation wages This book tells the tale of how in spite of all those impediments women managed by sheer determination and genius to unlock the secrets of the night sky It is the story of some of science's most hallowed names Maria Mitchell Caroline Herschel Vera Rubin Nancy Grace Roman and Jocelyn Bell Burnell and also the story of scientists whose accomplishments were great but whose names have faded through lack of use Queen Seondeok of Korea who built an observatory in the 7th century that still stands today Wang Zhenyi who brought heliocentrism to China Margaret Huggins who perfected the techniques that allowed us to photograph stellar spectra and thereby completely changed the direction of modern astronomy and Hisako Koyama whose multi decade study of the sun's surface is as impressive a feat of steadfast scientific dedication as it is a rigorous and valuable treasure trove of solar data A History of Women in Astronomy and Space Exploration is not only a book however of those who study space but of those who have ventured into it from the fabled Mercury 13 whose attempt to join the American space program was ultimately foiled by betrayal from within to mythical figures like Kathryn Sullivan and Sally Ride who were not only pioneering space explorers but scientific researchers and engineers in their own rights aided in their work by scientists like Mamta Patel Nagaraja who studied the effects of space upon the human body and computer programmers like Marianne Dyson whose simulations prepared astronauts for every possible catastrophe that can occur in space Told through over 130 stories spanning four thousand years of humanity's attempt to understand its place in the cosmos A History of Women in Astronomy and Space Exploration brings us at last the full tale of women's evolution from instrument makers and calculators to the theorists administrators and explorers who have while receiving astonishingly little in return given us quite literally the universe

**Fluke** Brian Klaas,2025-01-21 In Fluke social scientist Brian Klaas takes a deep dive into the phenomenon of random chance and the chaos it can sow taking aim at most people's neat and tidy version of reality The book's argument is that we willfully ignore a bewildering truth but for a few small changes our lives and our societies could be radically different Offering an entirely new lens Fluke explores how our world really works driven by strange interactions and apparently random events Drawing on social science chaos theory history evolutionary biology and philosophy Klaas provides a fresh look at why things happen all while providing lessons on how we can live smarter be happier and lead more fulfilling lives

**The Limitations of Theological Truth** Nigel Bush,2019-03-26 Theology is based on God's true and unchanging Word but does the Bible supply an unwavering foundation for spiritual certainties Perhaps surprisingly Brush contends that it does not because like science it is a human discipline and subject to our limitations of knowledge interpretation and objectivity In part one Brush unpacks this contention showing how Christians both past and present have arrived at conclusions that actually run counter to biblical teaching and how these interpretive viewpoints have changed over time In part two he makes the case that flawed theological positions have resulted in views that needlessly conflict with science and that these clashes can be resolved with more accurate formulations Brush evenly evaluates questions including the age of the earth the origin of life and the end of time Christians who wish to better understand the relationship between their faith and science will be encouraged by the great harmony that Brush sees between scientific findings and biblical teaching As he guides readers into an awareness of the inherent limitations of our knowledge believers can cultivate greater humility regarding these contested issues

*A User's Guide--The Sequel* Herb Gruning,2022-08-30 There is science and there is religion and never the twain shall meet Is that to be the fate of these two disciplines Having one foot in the religious world and the other in the scientific can be as precarious as attempting to remain astride two logs in a river In this sequel to *A User's Guide to Our Present World* What Everyone Should Know about Religion and Science complexions of what religion and science look like today are investigated It discusses topics from Jesus and family values evangelists who arrive at your door discrimination and racism and the dark side for religion to delicate balances impacting us and the world climate change the pandemic and how ancient structures like Stonehenge and the pyramids could have been built for science The study then turns to theological implications of scientific theories including relativity and quantum Sure to ruffle the feathers of some from both sides the examination focuses on how scientific paradigms fail to cohere with traditional theological doctrines and presents the potentially uncomfortable view that scientific revolutions might warrant a corresponding revolution for theology itself

**Squid Cinema From Hell** Brown William Brown,2020-04-02 Here be Kraken The Squid Cinema From Hell draws upon writers like Vilem Flusser Donna J Haraway Graham Harman and Eugene Thacker to offer up a critical analysis of

cephalopods and other tentacular creatures in contemporary media while also speculating that digital media might themselves constitute a weird intelligent alien. If this were not enough to shiver the timbers, the book engages with contemporary discourses of posthumanism, speculative realism, object-oriented ontology, and animal studies to suggest that humans are the products of media rather than media being the products of humans. Including case studies of films by Denis Villeneuve, Park Chan-wook, and Celine Sciamma, *The Squid Cinema From Hell* also provides a daring engagement with various media beyond cinema, including literature, music videos, 4DX advertising websites, YouTube, Artificial Intelligence, and more. Zounds! This unique and Lovecraftian book will change the way you think about and with our contemporary media-saturated world. For as we contemplate the abyss, the abyss looks back at us, and chthulumedias or media at the end of human times begin to emerge.

**The Future of Christology** Dong-Kun Kim, 2019-06-28. *The Future of Christology* addresses the questions that Christology currently faces and or will face in the future in 12 topics. The book consists of two parts. In the first part, Kim deals with five topics related to traditional Christology, while in the second part, he wrestles with seven topics related to issues of Christology. The twenty-first century is a challenging time for Christianity. Many in our age are asking what Jesus Christ means in various dimensions of history, culture, nature, and even beyond the Earth. Changes in values, worldviews, and views of the universe are forming a new zeitgeist. Dong-Kun Kim argues that ways of understanding Christ should change accordingly for a Christology that fails to communicate meaningfully with the times is void of vitality. Postmodernism, dehistoricization, and life post-ideology, multiculturalism, multiple religions, and above all, the rapid development of the natural sciences pose a serious challenge to traditional Christology. Who is Christ in the age of an infinite cosmos? How do daily human life, social devotion, and praxis relate to salvation? How can we discuss salvation history in an era post-history? Where does Christ stand in the public sphere? Can the Chalcedonian definition of the two natures of Christ, true God and true human being, encompass nature and the cosmos? Would a third nature of Christ be necessary? Will the cyborg, which may appear in the near future, be the object of Christ's salvation? If scientific determinism becomes popular in the future, will the basis of faith in Christ lose ground? If intelligent life exists in the universe, what does Christ mean to such life? This book provides innovative answers to these questions in an academic context.

**Theory of the Earth** Thomas Nail, 2021-04-27. We need a new philosophy of the earth. Geological time, used to refer to slow and gradual processes, but today we are watching land sink into the sea and forests transform into deserts. We can even see the creation of new geological strata made of plastic, chicken bones, and other waste that could remain in the fossil record for millennia or longer. Crafting a philosophy of geology that rewrites natural and human history from the broader perspective of movement, Thomas Nail provides a new materialist, kinetic ethics of the earth that speaks to this moment. Climate change and other ecological disruptions challenge us to reconsider the deep history of minerals, atmosphere, plants, and animals, and to take a more process-oriented perspective that sees humanity as part of the larger cosmic and terrestrial drama of mobility and flow.

Building on his earlier work on the philosophy of movement Nail argues that we should shift our biocentric emphasis from conservation to expenditure flux and planetary diversity Theory of the Earth urges us to rethink our ethical relationship to one another the planet and the cosmos at large

**Science, Religion and Deep Time** Lowell Gustafson, Barry Rodrigue, David Blanks, 2022-07-05 This book examines the meaning of religion within the scientific evidence based history of our known past since the big bang While our current major religions are only centuries or millennia old our volume discusses the origins and development of human religious practice and belief over our species existence of 300 000 years The volume also connects the scientific approach to natural and social history with ancient truths of our religious ancestors using new lines of inquiry new technologies new modes of expression and new concepts It brings together insights of natural scientists social scientists philosophers writers and theologians to discuss narratives of the universe The essays discuss that to apprehend religion scientifically or to interpret and explain science theologically the subject must be examined through a variety of disciplinary lenses simultaneously and raise several theoretical philosophical and moral problems With a singular investigation into the meaning of religion in the context of the 13 8 billion year history of our universe this book will be indispensable for scholars and students of religious studies big history sociology and social anthropology philosophy and science and technology studies
