The background of the cover is a photograph of a modern cable-stayed bridge at sunset. The bridge's dark structure, including its tall pylon and numerous stay cables, is silhouetted against a vibrant sky of orange, red, and blue. The bridge spans a body of water, and the warm colors of the sunset are reflected on the calm surface. The overall composition is a wide-angle shot, emphasizing the bridge's length and the serene atmosphere of the twilight.

Mass Transport in Solids and Fluids David S. Wilkinson, 2000-11-02 The field of matter transport is central to understanding the processing of materials and their subsequent mechanical properties While thermodynamics determines the final state of a material system it is the kinetics of mass transport that governs how it gets there This book first published in 2000 gives a solid grounding in the principles of matter transport and their application to a range of engineering problems The author develops a unified treatment of mass transport applicable to both solids and liquids Traditionally matter transport in fluids is considered as an extension of heat transfer and can appear to have little relationship to diffusion in solids This unified approach clearly makes the connection between these important fields This book is aimed at advanced undergraduate and beginning graduate students of materials science and engineering and related disciplines It contains numerous worked examples and unsolved problems The material can be covered in a one semester course

Risk Analysis David Vose, 2008-04-28 This book concerns itself with the quantification of risk the modeling of identified risks and how to make decisions from those models Quantitative risk analysis QRA using Monte Carlo simulation offers a powerful and precise
