Aslaksen,2012-09-13

Systems engineering is a mandatory approach in some industries and is gaining wider acceptance for complex projects in general However under the imperative of delivering these projects on time and within budget the focus has been mainly on the management aspects with less attention to improving the core engineering activity design This book addresses the

application of the system concept to design in several ways by developing a deeper understanding of the system concept by defining design and its characteristics within the process of engineering and by applying the system concept to the early stage of design where it has the greatest impact A central theme of the book is that the purpose of engineering is to be useful in meeting the needs of society and that therefore the ultimate measure of the benefit of applying the system concept should be the extent to which it advances the achievement of that purpose Consequently any consistent top down development of the functionality required of a solution to the problem of meeting a defined need must proceed from such a measure and it is argued that a generalised form of Return on Investment is an appropriate measure A theoretical framework for the development of functionality based on this measure and utilising the system concept is presented together with some examples and practical guidelines

*Crafting Textiles in the Digital Age* Nithikul Nimkulrat, Faith Kane, Kerry Walton, 2016-09-08 In an era of increasingly available digital resources many textile designers and makers find themselves at an interesting juncture between traditional craft processes and newer digital technologies Highly specialized craft design practitioners may now elect to make use of digital processes in their work but often choose not to abandon craft skills fundamental to their practice and aim to balance the complex connection between craft and digital processes The essays collected here consider this transition from the viewpoint of aesthetic opportunity arising in the textile designer's hands on

experimentation with material and digital technologies available in the present Craft provides the foundations for thinking within the design and production of textiles and as such may provide some clues in the transition to creative and thoughtful use of current and future digital technologies Within the framework of current challenges relating to sustainable development globalization and economic constraints it is important to interrogate and question how we might go about using established and emerging technologies in textiles in a positive manner
