Christou, 2005 At a time when the issue of human rights in Africa is making many advances Human Rights Sourcebook and Manual for Africa introduces easy to use jurisprudence The first section covers key principles and human rights norms which are detailed in straightforward language The second section is devoted to the death penalty detailing the relevant provisions from both international and regional instruments and offering a comparative commentary as to how the principles and relevant rights relate to the death penalty The third section summarizes key case law from international regional and domestic African courts and tribunals The case summaries detail the facts and decisions and include a headnote of relevant concepts for quick reference The fourth section focuses on thirteen African countries yet the reports are a useful comparative resource for all countries From conducting the research and compiling the material for this final section it is apparent that nothing like this has been attempted before in Africa Much of the work emanates from primary research and investigation conducted by local research teams in the individual countries Investigative research includes visiting prisons physically counting the individuals on death row and interviewing the detainees to obtain their age and the length of time they had been on death row *The Key to Technical Translation* Michael Hann, 1992-01-01 This handbook for German English German technical translators at all levels from student to professional covers the root terminologies of the spectrum of scientific and engineering fields The work is designed to give technical translators direct insight into the main error sources occurring in their profession especially those resulting from a poor understanding of the subject matter and the usage of particular terms to designate different concepts in different branches of technology The style is easy to read and suitable for nonnative English speakers and translators with no engineering experience Volume 1 presents a comprehensive systematic description of the basic concepts underlying all branches of technology Electrical Mechanical and Chemical Engineering Materials Science Electronics Nucleonics Aeronautics Computers Automobiles Plastics and other important fields Volume 2 expands

this terminology with the aid of a Technical Thesaurus and a set of structured bilingual dictionaries which draw attention to specific English German errors usage of technical vocabulary and to collocations of general vocabulary in engineering contexts The two volumes combine 3 major areas 1 Technical Translation 2 General Linguistics and 3 Computational Lexicography possibly indirectly marking the birth of a new discipline Technical Linguistics The book is designed for practical as well as academic use for translator trainers practicing translators applied linguists and professional engineers and scientists working with English German documentation There is so much material there that the books will not only be wanted by English German English translators but the English basis on its own will be attractive to other language orientations involving English Juan C Sager UMIST Manchester **Moody's International Manual** ,1995 *China Shifts Gears* Kelly Sims Gallagher,2006 Analyzes how the transfer of advanced automobile technology from U S firms affects the environment and economic development in China with detailed case studies of Chinese joint ventures with Jeep GM and Ford
