Jones, Iliia Ponomarenko, Jozef Širáň, 2020-01-10 This book consists of a selection of peer reviewed contributions to the Workshop on Algebraic Graph Theory that took place in Pilsen Czech Republic in October 2016. Primarily intended for early career researchers it presents eight self-contained articles on a selection of topics within algebraic combinatorics ranging from association schemes to symmetries of graphs and isomorphism testing. Algebraic combinatorics is a compelling mathematical discipline based on the powerful interplay of algebraic and combinatorial methods. Algebraic interpretation of combinatorial structures such as symmetry or regularity has often led to enlightening

discoveries and powerful results while discrete and combinatorial structures have given rise to new algebraic structures that have found valuable applications In addition to these original research contributions the reader will find a survey linking numerous threads in algebraic combinatorics and an extensive tutorial showcasing the universality of algebraic methods in the study of combinatorial structures
