Bishop, David K. Campbell, Steven E. Trullinger, Pradeep Kumar, 2012-12-06 The Sixth Annual Conference of the Center for Nonlinear Studies at the Los Alamos National Laboratory was held May 5-9 1986 on the topic Nonlinearity in Condensed Matter Lessons from the Past and Prospects for the Future As conference organizers we felt that the study of non linear phenomena in condensed matter had matured to the point where it made sense to take stock of the numerous lessons to be learned from a variety of contexts where nonlinearity plays a fundamental role and to evaluate the prospects for the growth of this general discipline The successful 1978 Oxford Symposium on nonlinear soliton structure and dynamics in condensed matter Springer Ser Solid State Sci Vol 8 was held at a time when the ubiquity of solitons was just beginning to be appreciated by the condensed matter community in subsequent years the soliton paradigm has provided a rather useful framework for investigating a large number of phenomena particularly in low dimensional systems Nevertheless we felt that the importance of nonlinearity in wider arenas than solitonics merited a significant expansion in the scope of the conference over that of the 1978 symposium Indeed many of the lessons are quite general and their potential for cross fertilization of otherwise poorly connected disciplines was certainly one of the prime motivations for this conference Thus while these proceedings contain many contributions pertaining to soliton behavior in different contexts the reader will find much more as well particularly in the later chapters Subject Guide to Books in Print, 1996 HPI Future SOC Lab Meinel, Christoph, Polze, Andreas, Oswald, Gerhard, Strotmann, Rolf, Seibold, Ulrich, Schulzki, Bernard, 2015-06-03 The HPI Future SOC Lab is a cooperation of the Hasso Plattner Institut HPI and industrial partners Its mission is to enable and promote exchange and interaction between the research community and the industrial partners The HPI Future SOC Lab provides researchers with free of charge access to a complete infrastructure of state of the art hard and software This infrastructure includes components which might be too expensive for an ordinary research environment such as servers with up to 64 cores The offerings address researchers particularly from but not limited to the areas of computer science and business information systems Main areas of research include cloud computing parallelization and In Memory technologies This technical report presents results of research projects executed in 2013 Selected projects have presented their results on
