linguists use a wide variety of methods to study discourse patterns This volume provides a systematic comparison of various methodological approaches in corpus linguistics through a series of parallel empirical studies that use a single corpus dataset to answer the same overarching research question Ten contributing experts each use a different method to address the same broadly framed research question In what ways does language use in online Q A forum responses differ across four world English varieties India Philippines United Kingdom and United States Contributions will be based on analysis of the same 400 000 word corpus from online Q A forums and contributors employ methodologies including corpus based discourse analysis audience perceptions Multi Dimensional analysis pragmatic analysis and keyword analysis In their introductory and concluding chapters the volume editors compare and contrast the findings from each method and assess the degree to which triangulating multiple approaches may provide a more nuanced understanding of a research question with the aim of identifying a set of complementary approaches which could arguably take into account analytical blind spots Baker and Egbert also consider the importance of issues such as researcher subjectivity type of annotation the limitations and affordances of different corpus tools the relative strengths of qualitative and quantitative approaches and the value of considering data or information beyond the corpus Rather than attempting to find the best approach the focus of the volume is on how different corpus linguistic methodologies may complement one another and raises suggestions for further methodological studies which use triangulation to enrich corpus related research **Corpus Linguistics and the Web**

Corpora in Cognitive Linguistics Stefan Th. Gries, Anatol Stefanowitsch, 2008-08-22 Cognitive Linguistics the branch of linguistics that tries to make one's account of human language accord with what is generally known about the mind and the brain has become one of the most flourishing fields of contemporary linguistics. The chapters address many classic topics of Cognitive Linguistics. These topics include studies on the semantics of specific words including polysemy and synonymy as well as semantic characteristics of particular syntactic patterns constructions including constructional synonymy and the schematicity of constructions the analysis of causatives transitivity and image schematic aspects of posture verbs. The key characteristic of this volume is that all papers adopt the methodological perspective of Corpus Linguistics the rapidly evolving branch of linguistics based on the computerized analysis of language used in authentic settings. Thus the contributions do not only all provide various new insights in their respective fields they also introduce new data as well as new corpus based and quantitative methods of analysis. On the basis of their findings the authors discuss both theoretical implications going well beyond the singular topics of the studies and show how the discipline of Cognitive Linguistics can benefit from the rigorous analysis of naturally occurring language. The languages which are investigated are English German Dutch and Russian and the data come from a variety of different corpora. As such the present volume will be of interest to a wide range of scholars with many different foci and interests and should pave the way for further integration of usage based techniques of analysis within this exciting paradigm.
