Information Technology in Medical Diagnostics III Waldemar Wójcik, Saygid Uvaysov, Andrzej Smolarz, 2021-05-10 The science of biomedical measurements is experiencing a period of rapid development Biomedical measuring systems are becoming increasingly accurate on the one hand and complex on the other In order to make progress in this field metrological problems must be solved using a systemic and formal approach To this end it is necessary to define the components of the system and the rules for their interaction which allows the creation of a mathematical model In this way any technology or object can be presented in the form of a structure on which the necessary estimates can be formulated and synthesis including metrological one can be made The authors have observed that despite the significance of the problem few scientific centres deal with this issue in a generalised manner Hence the idea of bringing together the achievements of the centres from Russia Poland and Kazakhstan in one joint publication The first and second volumes of Information Technology in Medical Diagnostics found readers not only in Poland Ukraine and Kazakhstan but also Spain Russia and the Czech Republic Following the readers suggestions in the third volume of ITMD we returned to the formula of closed chapters known from volume one Due to its limited volume the book deals with the aforementioned

issues in only selected areas of biomedical engineering The book will be of interest not only for academics and engineers but also for professionals involved in biomedical engineering seeking solutions for the problems that cannot be solved using traditional technologies or trying to improve existing measurement systems
