Contextual Analysis Quantitative Applications In The Social Sciences:

Contextual Analysis Gudmund R. Iversen, 1991-08-14 The effective use of contextual analysis the study of the role of group context on actions and attitudes of individuals often involves overcoming a number of issues such as group boundaries the mobility of individuals within a group overlapping groups missing individual data and the choice of statistical models This straightforward volume offers researchers a guide for selecting the best model to use and discusses such topics as contextual analysis with absolute effects with relative effects and the choice between regression coefficients as fixed parameters or as random variables

The SAGE Encyclopedia of Social Science Research Methods Michael Lewis-Beck, Alan E Bryman, Tim Futing Liao, 2003-12-15 This defining work will be valuable to readers and researchers in social sciences and humanities at all academic levels As a teaching resource it will be useful to instructors and students alike and will become a standard reference source Essential for general and academic collections CHOICE This Encyclopedia provides readers with authoritative essays on virtually all social science methods topics quantitative and qualitative by an international collection of experts Organized alphabetically the Encyclopedia of Social Science Research Methods covers research terms ranging from different methodological approaches to epistemological issues and specific statistical techniques Written to be accessible to general readers the Encyclopedia entries do not require advanced knowledge of mathematics or statistics to understand the purposes or basic principles of any of the methods To accomplish this goal there are two major types of entries definitions consisting of a paragraph or two to provide a quick explanation of a methodological term and topical treatments or essays that discuss the nature history applications and implications of using a certain method including suggested readings and references Readers are directed to related topics via cross referenced terms that appear in small capital letters By assembling entries of varied origins and serving different research purposes readers will be able to benefit from this immense source of methodological expertise in advancing their understanding of research With three volumes and more than 900 signed entries the Encyclopedia of Social Science Research Methods will be a critical addition to any social science library

Applied Regression Models in the Social Sciences Dudley L. Poston, Jr, Eugenia Conde, Layton M. Field, 2023-08-17 This accessible and practical textbook gives students the perfect guide to the use of regression models in testing and evaluating hypotheses dealing with social relationships A range of statistical methods suited to a wide variety of dependent variables is explained which will allow students to read understand and interpret complex statistical analyses of social data Each chapter contains example applications using relevant statistical methods in both Stata and R giving students direct experience of applying their knowledge A full suite of online resources including statistical command files datasets and results files homework assignments class discussion topics PowerPoint slides and exam questions supports the student to work independently with the data and the instructor to deliver the most effective possible course This is the ideal textbook for advanced undergraduate and beginning graduate students taking courses in applied social statistics

The Multilevel

Design Harry Jm Huttner, Pieter van den Eeden, 1995-01-30 In the social sciences phenomena tend to be hierarchically structured so that individuals belong to groups and groups belong to larger organizations and societies Multilevel research stresses this hierarchical structure of social life and necessarily assumes the existence of a particular organization of the procedures of investigation This organization which is fundamental to the research is called a research design Because the research is hierarchical it uses a multilevel design This book provides a detailed overview of the theoretical and methodological aspects of multilevel research based on the multilevel definition of social structure Six chapters discuss the foundations of multilevel research and the applications of its research in the social sciences An annotated bibliography follows which is divided into eight sections on theoretical and methodological issues and on applications of multilevel research Included are books and articles published from 1980 through 1993 Regression Models Richard Breen, 1996-01-09 What techniques can social scientists use when an outcome variable for a sample for example y is not representative of the population for which generalized results are preferred Author Richard Breen provides an introduction to regression models for such data including censored sample selected and truncated data Regression Models begins with a discussion of the Tobit model and examines issues such as maximum likelihood estimation and the interpretation of parameters The author next discusses the basic sample selection model and the truncated regression model Elaborating on the modeling of censored and sample selected data via maximum likelihood he shows the close links between the models introduced and other regression models for non continuous dependent variables such as the ordered probit Concluding with an exploration of some of the criticisms of these approaches and difficulties associated with them this volume gives readers a guide to the practical utility of these models Nonrecursive Causal Models William Dale Berry, 1984-07 The author defines the concept of identification and explains what goes wrong with some nonrecursive models to make them nonidentified He provides various tests which can be used to determine whether a nonrecursive model is identified and reviews common techniques for estimating the parameters of an identified model *Effect Size for ANOVA Designs* Jose M. Cortina, Hossein Nouri, 2000 Researchers have been complaining about the lack of one single place to find information on computing effect sizes in analysis of variance ANOVA until now Authors Jose M Cortina and Hossein Nouri begin with a literature review of previous treatments of the topic including corrections to the misleading treatments of repeated measures and ANCOVA analysis of covariance designs They introduce the effect sizes by defining the term and explaining how it is computed from summary and test statistics for the simple two independent group design They next provide a description of methods for computing effect sizes from the results of one way designs with more than two groups and then extend these methods to cases in which the effects of interest are embedded within the context of two and three way ANOVA s They conclude the book with an explanation of the methods for computing effect size from the results of ANCOVA designs followed by the methods for computing effect sizes from the results of repeated measures Throughout the book the authors offer examples

with worked out computations to illustrate each technique Researchers who need to estimate their effect size of run a meta analysis will find this book very useful **Confidence Intervals** Michael Smithson,2003 Using lots of easy to understand examples from different disciplines the author introduces the basis of the confidence interval framework and provides the criteria for best confidence intervals along with the trade offs between confidence and precision The book covers such pertinent topics as the transformation principle whereby a confidence interval for a parameter may be used to construct an interval for any monotonic transformation of that parameter confidence intervals on distributions whose shape changes with the value of the parameter being estimated the relationship between confidence interval and significance testing frameworks particularly regarding power **Nonparametric Measures of Association** Jean Dickinson Gibbons,1993-02-25 This compact and highly readable volume presents Spearman s and Kendall s rank correlation and coefficients Kendall s coefficients of concordance and of partial correlation and several association measures for ordered contingency tables This inexpensive and lucid text offers a good introduction or a quick review of methods of rank correlation It should prove beneficial to the practitioner who selects from and interprets the many measures produced by modern statistical packages Journal of the American Statistical Association When analyzing your data how should you describe the relationship or association between two or more sets of observations i e values of two or more variables when the variables are ordinal and not bivariate normal Aimed at helping the researcher select the most appropriate measure of association for two or more variables Jean Dickinson Gibbons clearly describes such techniques as Spearman s rho Kendall s tau Goodman Kruskals gamma and Somer s d She also carefully explains the calculation procedures as well as the substantive meaning of each measure such as that rho is based on rankings while tau is based on paired comparisons In addition each technique is illustrated by one or more examples from recent social or behavioral science studies Lastly Gibbons provides information on the strengths and weaknesses of leading statistical packages for calculating these measures *Multiple Comparison Procedures* Larry E. Toothaker,1993 If you conduct research with more than two groups and want to find out if they are significantly different when compared two at a time then you need Multiple Comparison Procedures Using examples to illustrate major concepts this concise volume is your guide to multiple comparisons Toothaker thoroughly explains such essential issues as planned vs post hoc comparisons stepwise vs simultaneous test procedures types of error rate unequal sample sizes and variances and interaction tests vs cell mean tests **Three Way Scaling** Phipps Arabie,Douglas Carroll,Wayne S. DeSarbo,1987 This volume is a logical extension of 11 Multidimensional Scaling providing an up to date overview of some three way modesl for multidimensional scaling and related techniques 104 **Calculus** Gudmund R. Iversen,1996-01-18 Aimed at readers who may be more familiar with statistics than calculus and mathematics this carefully written volume gives an overview of the central ideas in calculus Author Gudmund R Iversen shows examples of how calculus is used to translate many real world phenomena into mathematical functions Beginning with an explanation of the two major

parts of calculus differentiation and integration Iversen illustrates how calculus is used in statistics to distinguish between the mean and the median to derive the least squares formulas for regression coefficients to find values of parameters from theoretical distributions and to find a statistical p value when we using one of the continuous test variables like the t variable Social scientists who either never took a calculus course or who want to brush up on their understanding of calculus will find this book a necessity

Measures of Association Albert M. Liebetrau, 1983-04 Clearly reviews the properties of important contemporary measures of association and correlation Liebetrau devotes full chapters to measures for nominal ordinal and continuous interval data paying special attention to the sampling distributions needed to determine levels of significance and confidence intervals Valuable discussions also focus on the relationships between various measures the sampling properties of their estimators and the comparative advantages and disadvantages of different approaches

The Logic of Causal Order James A. Davis, 1985-11 Prof Davis spells out the logical principles that underlie our ideas of causality and explains how to discover causal direction irrespective of the statistical technique used He stresses that knowledge of the real world is important and that causal problems cannot be solved by statistical calculations alone

Causal Modeling Herbert B. Asher, 1976 Retains complete coverage of the first edition while amplifying key areas such as direct indirect effects standardized unstandardized variables multicollinearity and nonrecursive modeling

LISREL Approaches to Interaction Effects in Multiple Regression James Jaccard, Choi K Wan, 1996-03-21 With detailed examples this book demonstrates the use of the computer program LISREL and how it can be applied to the analysis of interactions in regression frameworks The authors consider a wide range of applications including qualitative moderator variables longitudinal designs and product term analysis They describe different types of measurement error and then present a discussion of latent variable representations of measurement error which serves as the foundation for the analyses described in later chapters Finally they offer a brief introduction to LISREL and show how it can be used to execute the analyses Readers can use this book without any prior training in LISREL and will find it an excellent introduction to analytic methods that deal with the problem of measurement error in the analysis of interactions

Information Theory Klaus Krippendorff, 1986-09 Information theory always has the dual appeal of bringing important concepts to the study of communication in society and of providing a calculus for information flows within systems This book introduces readers to basic concepts of information theory extending its original linear conception of communication to many variables networks and higher order interactions including loops and developing it into a method for analyzing qualitative data It elaborates on the algebra of entropy and information shows how complex models of data are constructed and tested describes algorithms for exploring multivariate structures using such models and gives illustrative applications of these techniques The book is designed as a text but it can also serve as a handbook for social researchers and systems theorists with an interest in communication

Factor Analysis Jae-On Kim, Charles W. Mueller, 1978-11 Describes various commonly used methods of initial factoring and factor rotation In addition

to a full discussion of exploratory factor analysis confirmatory factor analysis and various methods of constructing factor scales are also presented **Processing Data** Linda Brookover Bourque, Virginia Clark, 1992-06-06 This volume highlights the theory that decisions made during the design of a data collection instrument influence the kind of data and the format of the data that are available for analysis Opening with a discussion on the selection of the data collection technique s and how this impacts on data processing and the data for later analysis the book covers key issues such as should you create your own instrument for a questionnaire how do you test a questionnaire what are the characteristics of good data processing how to deal with missing data how to scale an evaluation and create subfiles for analysis In addition each major section concludes with examples and when appropriate directs the reader to commonly available computer software that can aid in data processing *Mediation Analysis* Dawn Iacobucci, 2008-04 Explores even the fundamental assumptions underlying mediation analysis
