## **Exploring Atlantis II:**

*The Red Sea* Najeeb M.A. Rasul, Ian C.F. Stewart, 2015-04-02 This book presents a broad overview of the current state of knowledge regarding the Red Sea from its geological formation and oceanographic development to the environmental influences on its ecology and the changes it is experiencing due to the rapid development of its coastlines and role as one of the world's major transport routes. The book gathers invited contributions from researchers with an interest in the geology, geophysics, oceanography, and environment of the Red Sea while also providing comprehensive new data and a complete review of the literature. It will be of interest not only to researchers actively studying the sea and its surroundings but will also appeal to all those involved in planning and managing the Red Sea, its environment, its resources, and the countries which rely on its existence. **International Decade of Ocean Exploration** United States. Environmental Data Service, 1973

**Handbook of Geophysical Exploration at Sea** Richard A. Geyer, 2018-02-06 This handbook presents advanced research and operational information about hard minerals and hydrocarbons. It provides information in an integrated interdisciplinary manner, stressing case histories. It includes review chapters, illustrations, graphs, tables, and color satellite images that present the results of gravity, geodetic, and seismic surveys and of 3-D sea floor, sub-bottom visualizations. The data was obtained using satellites, aircraft, and ships from the Atlantic and Pacific Oceans, the Gulf of Mexico, and the Caribbean Sea. Major topics addressed in these volumes include geophysical methods used to explore for hydrocarbons, advanced radiometric and electrical methods for hard mineral searches, the role of geotechnology and seismic acoustics in overcoming geological hazards in selecting drilling sites and pipeline routes, and remote sensing techniques used to determine the physical properties of hydrocarbons. **Marine Mineral Exploration** H. Kunzendorf, 1986-05-01 The past 20 years have seen extensive marine exploration work by the major industrialized countries. Studies have in part been concentrated on Pacific manganese nodule occurrences and on massive sulfides on mid-oceanic ridges. An international jurisdictional framework of the sea bed mineral resources was negotiated by the United Nations Conference on the Law of the Sea (UNCLOS III). A most important outcome of this conference was the establishment of an Exclusive Economic Zone (EEZ) of at least 200 nautical miles for all coastal states and the recognition of a deep sea regime. Mineral deposits in EEZ areas are fairly unknown; many areas need detailed mapping and mineral exploration, and the majority of coastal or island states with large EEZ areas have little experience in exploration for marine hard minerals. This book describes the systematic steps in marine mineral exploration. Such exploration requires knowledge of mineral deposits and models of their formation, of geophysical and geochemical exploration methods, and of data evaluation and interpretation methods. These topics are described in detail by an international group of authors. A short description is also given of marine research vessels, evaluation of marine exploration examples, and an overview is provided of the jurisdictional situation after UNCLOS III.

**The Lost Atlantis** Sir Daniel Wilson, 1892 [Sea Floor Exploration](#) Roger Hekinian, 2014-01-09 The author participated

in 38 sea going expeditions including the first manned submersible project to explore the Mid Atlantic Ridge This book provides a comprehensive overview of the past 45 years of sea floor exploration It summarizes the mineralogical and petrological composition of sea floor rocks ocean floor volcanism in relation to the geological setting and the discovery of hydrothermal activity In addition to learning about various scientific missions and their objectives the reader is introduced to rift zones where the sea floor is being created as well as to fracture zones intraplate volcanoes and the structural setting of subduction zones     Discovering the Deep Jeffrey A. Karson, Deborah S. Kelley, Daniel J. Fornari, Michael R. Perfit, Timothy M. Shank, 2015-04-23 A beautifully illustrated reference providing fascinating insights into the hidden world of the seafloor using the latest deep sea imaging     Minerals Yearbook - V. 3, Area Reports: International Review Mines Bureau, Geological Survey, Interior Department, 2013-12-09 The Minerals Yearbook is an annual publication that reviews the mineral and material industries of the United States and foreign countries The Yearbook contains statistical data on materials and minerals and includes information on economic and technical trends and development The Minerals Yearbook includes chapters on approximately 90 commodities and over 175 countries This volume of the Minerals Yearbook provides an annual review of mineral production and trade and of mineral related government and industry developments in more than 175 foreign countries Each report includes sections on government policies and programs environmental issues trade and production data industry structure and ownership commodity sector developments infrastructure and a summary outlook

**Gold Metallogeny and Exploration** B. Foster, 2012-12-06 Within the last decade the high and continuing demand for gold has prompted a global gold rush on a scale never before seen not even in the heady days of Ballarat California and the Yukon Gold is being sought on every continent and with very few exceptions in every country around the world Such interest and fierce competition has demanded considerable innovation and improvement in exploration techniques paralleled by a rapid expansion of the geological database and consequent genetic modelling for the many different types of gold deposits now recognized This proliferation of data has swamped the literature and left explorationist and academic alike unable to sift more than a small proportion of the accumulating information This new book represents an attempt to address this major problem by providing succinct syntheses of all major aspects of gold metallogeny and exploration ranging from the chemical distribution of gold in the Earth's crust and the hydrothermal chemistry of gold to Archaean and Phanerozoic lode deposits epithermal environments chemical sediments and placer deposits and culminates in chapters devoted to geochemical and geophysical exploration and the economics of gold deposits Each chapter is written by geoscientists who are acknowledged internationally in their respective fields thus guaranteeing a broad yet up to date coverage In addition each chapter is accompanied by reference lists which provide readers with access to the most pertinent and useful publications
