

The exponential growth model is

$$Q(t) = Q_0 e^{kt}$$

Suppose that on an island there is a population of rabbits that is growing exponentially. Initially there were 250 rabbits. Three months later there are 3600 rabbits.

- a. Use the exponential growth equation and the given information to set up an equation with time in months to find the exponential growth constant k

2500

- b. Use the above equation to solve for the exponential growth constant. Round your answer to three decimal digits.

$k = .122$

- c. What is the function that gives the number of rabbits as a function of the time from the initial counting?

$Q(t) = 5184$

- d. How many rabbits are there 6 months after the initial counting? Round your answer to the nearest whole rabbit.

438

Rabbits

- e. How fast is the population increasing at time $t = 3$ months?

630

Rabbits/Month

- f. How fast is the population increasing at time $t = 6$ months?

Three Dimensions A. Treffers, 2012-12-06 In Dutch WISKOBAS stands for a particular kind of mathematics in the elementary school ages 6 12 In tum Wiskobas was one of the depart ments in the IOWO the Institute for the Development of Mathematics Education This institute was concerned with the development of material for mathematics education as well as the related research on the possibility of change from the then existing arithmetic instruction to the future mathematics education The present publication *Three Dimensions* has three aims to give a picture of the goals Wiskobas set for future mathematics education at the same time to show how such goals can be described and to show the theoretical framework of the Wiskobas curriculum The problem at hand is not at all simple What is more Wiskobas ideas about mathematics education cannot literally be translated into strings of words So how can we face the accusation that our objectives are unattain able and the goal itself irrational In order to avoid this vagueness as much as possible and for the sake of clarity this book makes continuous use of

illustrations of mathematics education In these examples both the subject matter and the methods of description of the goals are illustrated as explicitly as possible while at the same time creating the opportunity to read between the lines The reader is urged to follow carefully the mathematical material at the start of each chapter This advice applies both to the more general education oriented and to the more mathematical didactical reader

An Essay Concerning Sociocultural Evolution Jürgen Klüver, 2013-04-17 Writing about sociocultural evolution is always a complicated enterprise because the subject is not only difficult in a scientific way but also in a political one In particular since the events of September 11 2001 the debates about the differences between cultures and their evolutionary developments have left the fields of pure scientific research once and for all However there have probably never been scientific discourses that did not touch the realms of political discussions Darwin Marx the atomic physicists and the recent debates about genetic engineering are just a few examples The aim of this book is not to take part in these debates but it is written as a contribution to the foundations of evolutionary theories in the social sciences The readers will have to judge if I have succeeded with it Perhaps essays like this one will help to clarify the problems we all have to face just now in regard to intercultural discourses Theoretically and mathematically grounded insights into cultural development as the source of many political problems will not solve to how to deal with them immediately but may serve as signposts in the long run
