Debating Climate Ethics Stephen Mark Gardiner, David A. Weisbach, 2016 Stephen M Gardiner and David A Weisbach present arguments for and against the relevance of ethics to global climate policy Gardiner argues that climate change is fundamentally an ethical issue rather than one of narrow economic self interest while Weisbach argues that existing ethical theories are flawed and do not provide adequate guidance for climate policy

Getting the Climate Science Facts Right Medani P. Bhandari, 2022-09-01 *Getting the Climate Science Facts Right* discusses climate change science with reference to the Intergovernmental Panel on Climate Change IPCC Addressing climate change is the most important public priority of the 21st Century Unlike many issues however this issue is being driven by both science and its interface with politics The main institution for bridging this division between science and international politics is the IPCC As such it is the main source of the facts from which climate change policy is developed This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based Seldom in history has science had such a direct relationship with politics The negotiation of an international policy regime requires at its outset an agreement on the facts In this case the facts are scientific complex and contentious Governments have recognized this and have by using the IPCC set up institutional machinery to provide facts from a source and in a manner that they can accept The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level Starting with a process to examine review and debate scientific findings leading to a consensus about scientific fact usually expressed as probabilities that the findings will hold over time the IPCC then concludes by using the kind of consensus development mechanism that the United Nations typically uses to achieve agreements leading to the formation of policy regimes The book examines the structure of the IPCC its composition and its procedures in order to achieve an understanding of its role and future

Biological Invasions and Global Insect Decline Jonatan Rodríguez, Petr Pysek, Ana Novoa, 2023-09-13 *Biological Invasions and Global Insect Decline* offers the most updated knowledge on how invasive alien species affect insect diversity worldwide The book provides ongoing research and the most relevant information covering the main aspects of the impact of biological invasions as well as future insights on mitigation and consequences It discusses how the introduction of all kinds of organisms from bacteria and plants to vertebrates affect current declines in insect diversity The latter portion of the book delves into existent and future monitoring and management programs including citizen science and regenerative ecology as socio ecological solutions to combat these threats Written and edited by international experts on invasion ecology and insect conservation this book explores the role of global change and the introduction of invasive species in altering the structure of habitats and how this induces a global insect decline This

Cooper, 2024-11-25 Despite all the talk of sustainability there has not been enough action to halt or reverse the impacts of climate change Decades after the Rio Earth Summit and despite the many policies and commitments to move toward sustainable development there continues to be a serious implementation gap Implementing Sustainable Development focuses on the challenges of turning international commitments and policy promises into local action Through global examples and cases the authors examine not only the core principles but also successful and failed efforts to address the social environmental and economic dimensions of sustainable development They systematically guide readers through the technical legal economic administrative political ethical and cultural feasibility of putting sustainable development solutions in place Based on broad research Claudia Mar a Vargas and Phillip J Cooper offer a practical and useful approach to identifying and addressing policy implementation challenges what works what doesn t and why Features of this thoroughly revised second edition include Dozens of case studies from the throughout the worldAn overview of the UN Sustainable Development GoalsAction oriented solutions to the challenges of sustainable developmentCareful consideration of local and indigenous knowledgeKey issues of equity equality and the importance of community involvement *Into the Clear Blue Sky* Rob Jackson, 2024-07-30 From one of the world s leading climate scientists a heart and mind changing book that offers a hopeful and attainable vision for restoring the atmosphere and ending the climate crisis Climate change is here From the millions displaced by the floods in Pakistan to Californian and Canadian towns incinerated by wildfires we are experiencing the anguish that climate change causes Fossil fuels are making the planet unlivable and they are deadly We know that we must cut emissions if we are going to limit the catastrophes but is that enough In *Into the Clear Blue Sky* climate scientist and chair of the Global Carbon Project Rob Jackson explains that we need to redefine our goals As he argues here we shouldn

t only be trying to stabilize the Earth's temperature at some arbitrary value. Instead we can restore the atmosphere itself in a lifetime and this should be our moral duty. Restoring the atmosphere means reducing the amount of greenhouse gases in the air to pre-industrial levels, starting with super-potent methane to heal the harm we have done. Emissions must be cut first and foremost. But to safeguard a livable planet for future generations we must repair the damage we have caused. Jackson introduces us to the brilliant leaders and innovators behind some of the boldest and game-changing climate solutions under development. When it comes to greenhouse gas mitigation, our choices matter because it is easier to stop emissions from happening than to remove greenhouse gases from the air later. But while mitigation is crucial, no number of solar panels, electric cars, and veggie burgers alone will be enough to halt climate change. Decades of inaction have convinced Jackson that we need to remove greenhouse gases from the air using everything from nature to cutting-edge technologies. Into the Clear Blue Sky is a heart and mind-changing book. Guided by one of the leading scientists in this fight and a deeply gifted storyteller, we learn why we should all feel hopeful. One way or another, we will restore the planet together. The question is how and how long will it take.

This publication is extracted from a much larger report, *Global Environmental Change Research Pathways for the Next Decade*, which addresses the full range of the scientific issues concerning global environmental change and offers guidance to the scientific effort on these issues in the United States. This volume consists of Chapter 7 of that report, *Human Dimensions of Global Environmental Change*, which was written for the report by the Committee on the Human Dimensions of Global Change of the National Research Council (NRC). It provides findings and conclusions on the key scientific questions in human dimensions research, the lessons that have been learned over the past decade, and the research imperatives for global change research funded from the United States.

Earth's forgotten Apocalypse , Before history began, something ended. Long before written records, Earth witnessed a cataclysm so massive it reshaped continents, erased civilizations, and left behind only whispers in myth and geology. This is the apocalypse you were never told about. In *Earth's Forgotten Apocalypse*, you'll uncover mysterious global flood legends with eerily similar timelines, ancient structures pointing to lost knowledge, and buried timelines. Sudden mass extinctions and unexplained geological scars. Evidence hidden in ice cores, desert sands, and sunken cities. Why mainstream science avoids the

inconvenient truth This isn't fiction This is for seekers of forbidden history truth hunters and those who suspect we've been here before and were wiped clean What if we're not the first advanced civilization And what if we're next
