Cost-Benefit Analysis for Development Asian Development Bank, 2013-01-01 The Asian Development Bank ADB has been continuously undertaking measures to enhance the effectiveness of its operations To improve projects both at the preparation and implementation

stages ADB issued the Guidelines for Economic Analysis of Projects in 1997 as a means to enhancing project quality at entry. The conduct of proper economic analysis helps ensure the efficient use of development funds and public resources and thereby increase aid effectiveness. This practical guide is a supplement to the Guidelines for the Economic Analysis of Projects. It provides an overview of recent methodological developments in cost benefit analysis as well as suggested improvements in the economic analysis of projects in selected sectors through case studies. These case studies illustrate the application of suggested methodologies taking into account sector specific needs as well as difficulties faced by practitioners in terms of data and time constraints during project processing. It also aims to contribute to ADB's capacity building initiatives as this will be the main reference material for conduct of economic analysis.

Investing in Resilience Asian Development Bank, 2013-01-01 Investing in Resilience Ensuring a Disaster Resistant Future focuses on the steps required to ensure that investment in disaster resilience happens and that it occurs as an integral systematic part of development. At risk communities in Asia and the Pacific can apply a wide range of policy capacity and investment instruments and mechanisms to ensure that disaster risk is properly assessed, disaster risk is reduced and residual risk is well managed. Yet real progress in strengthening resilience has been slow to date and natural hazards continue to cause significant loss of life, damage and disruption in the region undermining inclusive sustainable development. Investing in Resilience offers an approach and ideas for reflection on how to achieve disaster resilience. It does not prescribe specific courses of action but rather establishes a vision of a resilient future. It stresses the interconnectedness and complementarity of possible actions to achieve disaster resilience across a wide range of development policies, plans, legislation, sectors and themes. The vision shows how resilience can be accomplished through the coordinated action of governments and their development partners in the private sector, civil society and the international community. The vision encourages investors to identify and prioritize bundles of actions that collectively can realize that vision of resilience, breaking away from the current tendency to pursue disparate and fragmented disaster risk management measures that frequently trip and fall at unforeseen hurdles. Investing in Resilience aims to move the disaster risk reduction debate beyond rhetoric and to help channel commitments into investment incentives, funding and practical action.

Marine Extremes Erika Techera, Gundula Winter, 2019-01-14 Marine extremes as they are conceived of in this volume encompass environments, activities, events and impacts. Extreme environments found in and around our oceans including the deep sea and seabed as well as the frozen polar regions are being seriously affected by both extreme behaviours, dumping and discharge of waste, illegal fishing and piracy and extreme events, storms, tsunamis, extreme waves and marine heatwaves. The aim of this book is to highlight the multi-disciplinary knowledge and inputs needed to address marine extremes and thereafter to explore opportunities and current challenges. Safe and healthy oceans are important for economic, recreational and cultural activities in addition to the maintenance of ecosystem services upon which we rely. This volume gathers a unique mix of researchers working on scientific aspects of biological ecosystems and physical

processes together with social scientists exploring law and governance options community preferences cultural values economic aspects and criminological drivers and approaches The multi disciplinary feature of this book breaks down barriers that arise between disparate fields of research so that integrated solutions to ocean challenges can be found Overall this book argues that if we are to achieve sustainable utilisation of our oceans and blue economy goals we must better understand and respond to the extreme environments activities events and impacts The book is a valuable addition to the literature and will be of interest to researchers in marine science ocean governance and natural resource economics as well as to professionals and government officials concerned with marine policy and planning

conservation Perrings and Kinzig address key issues in the field of environmental economics including the valuation of ecosystem services and environmental assets the limits on the substitutability of produced and natural capital and the challenges posed by the often weak markets for ecosystem services oriented toward the public good They also address the problem of scale while decisions might be easier to make at the local level many conservation policies need to apply at either the national or international level to succeed Written by experts from both social and hard sciences this book presents a unified theory of conservation and provides a model for a more effective way to approach the vitally important issue
