**Safety Precautions**

**Read before use**  
 Before using this product, the user is requested to read the following precautions carefully to ensure the safety. Safety precautions must be taken for every year to prevent accidents.  
 The safety requirements are classified into "warning" and "caution" according to the following interpretations.

<b>Warning</b>	Suggesting that the user's mishandling can result in personal death or without injury.
<b>Caution</b>	Suggesting that the user's mishandling can result in personal injury or damage to the property.

**WARNING Over-temperature Protection**

"Any control system design should take into account that any part of the system has the potential to fail".  
 "The most dangerous condition of the system equipped with this product is continued heating, and the machine should be designed to automatically stop heating even if alarm is not issued at the time of failure of this product or due to any other reason".  
 The following are the most common cases where continued heating cannot be detected with this product:  
 1) Failure to issuing an alarm even when this product fails.  
 2) Disengagement of the temperature sensor from the system.  
 3) A short-circuit in the thermocouple wiring.  
 In any representation where physical injury or destruction of equipment might occur, we recommend the installation of independent safety equipment, with a separate temperature sensor, to disable the heating circuit in case of overheating.  
 Digital thermostat alarm signal is not designed to function as a protective measure in case of product failure.

 • Do not connect a Safety Extra Low Voltage (SELV) circuit directly to the input terminals. If you connect a SELV circuit to any of the input terminals, ensure to provide a basic insulation between them. For example, use a transformer that has a basic insulation or higher degree of insulation. The basic insulation requires a clearance of at least 1.5 mm and a creepage of at least 3.0 mm.  
 • Be sure to install an appropriate external protective circuit to prevent excessive temperature rise etc.  
 • When performing wiring work, be sure to turn the power off and to wear protection gloves or safety glasses, to prevent an electric shock.  
 • Set an appropriate parameter for the type of the input to be connected.  
 • Do not use this equipment for the measurement of circuits, which fall under measurement categories II, III, or IV.  
 • Do not use this equipment for measurement of signals to which a voltage over 30 Vrms or over 60 Vrms is applied.  
 • Attach the terminal cover to prevent an electric shock. Before removing a terminal cover, turn off all the power.

- If the voltage exceeds 50 V DC, add a basic insulation between all the terminals and the ground terminal.
- If there is a danger of a serious accident resulting from a failure or a defect in this unit, provide the unit with an appropriate external protective circuit to prevent an accident.
- The unit is supplied without a power switch and fuses. Add a power switch and/or fuse if needed. Make wiring so that the fuse is placed between the main power supply switch and this product. (Main power supply: 2 pole breaker, fuse rating: 250V 1A)
- A power switch or a circuit breaker should be installed within the power supply facility.
- A power switch or a circuit breaker should be properly installed within easy reach of an operator.
- A power switch or a circuit breaker should be identified as the one for this product.
- Electrical wiring must be made by the qualified personnel only and in accordance with your local and national standards.
- When wiring the power supply terminal, use vinyl insulated 600-volt cable or equivalent.
- To avoid the damage and decrease the power voltage falling to the wiring.
- To avoid an electric shock and this product failure, do not turn ON the power before all wiring is completed.
- Be sure to check that the distance is kept to avoid electric shock or firing before turning the power ON.
- Keep away from terminals while the circuit is energized in order to avoid an electric shock and a malfunction.
- Avoid attempt to disassemble, fabricate, modify, or repair this unit because tampering with the unit may result in a malfunction, electric shock, or a fire.
- A relay has a limited life. When an output relay contact comes to the end of its life, it might remain opened or closed. Use a protective circuit outside this product for safety.

**2. Caution**

**2-1. Cautions on installation**

- Avoid the following places for installation.
- a place where the ambient temperature may reach beyond the range from -10 to 50°C while in operation.
  - a place where a change in the ambient temperature is so rapid as to cause condensation.
  - a place where corrosive gases and combustible gases, in particular, or combustible gases are emitted.
  - a place where the unit is subject directly to vibration or shock. (vibration or shock may cause malfunction of the output relay.)
  - a place exposed to water oil, chemicals, steam and vapor.
  - (If interfered with rain, the unit should be covered by a rain cover to avoid an electrical leakage and firing.)
  - a place where the unit is exposed to dust, salt air, or air containing iron particles.
  - a place where the unit is subject to interference with static electricity, magnetism, and noise.
  - a place where the unit is exposed to direct sunlight.
  - a place where the heat may be accumulated due to the radiation of heat.
  - a place where the ambient humidity may reach beyond 50% RH while in operation.

**About EMC standard**

- This equipment is designed as a Class A equipment that is for industrial locations. Do not use this equipment in domestic establishment such as residential areas, or it may cause radio interference. If you unavoidably use this equipment in domestic locations, take adequate measures on the outside of the equipment to reduce radio interference.
- Under the requirement of EMC standard, the maximum length of external cable including a sensor to be connected to this equipment is 30 m.

**2-2. Cautions on installation on panel**

- Insert the mounting bracket (provided) from the rear side until the main unit is securely fit into the panel. If there should be a gap, tighten two screws lightly until the gap is eliminated. (Do not tighten the screws excessively because the mounting bracket can be removed from the stopper by the force.)
- The front panel needs NEMA 4X (equivalent to IP65) requirements. To ensure the waterproofness between the instrument and the panel, use packings that are provided as accessories in the following manner. (The improper fitting of packings will ruin the waterproofness.)
- As shown in Figure 1, fit a packing to the case of the unit and then insert the PXR3 in the panel.
- As shown in Figure 2, tighten the screws of the mounting adapter so that no gaps are given between the front panel of the instrument, packing, and the panel.
- Check that there are no deviation and deformation of packing as shown in Fig.3.
- If panel strength is weak, it may generate a gap between the packing and the panel, thus impairing water resistance.

**Caution**

- Don't block the openings around this product, or radiation effect will be reduced.
- Don't block the ventilation openings at the top of the terminal block.
