H. Hardy, Marcel Riesz, 2013-01-23 This classic work explains the theory and formulas behind Dirichlet's series and offers the first systematic account of Riesz's theory of the summation of series by typical means Its authors rank among the most distinguished mathematicians of the twentieth century G H Hardy is famous for his achievements in number theory and mathematical analysis and Marcel Riesz's interests ranged from functional analysis to partial differential equations mathematical physics number theory and algebra Following an introduction the authors

proceed to a discussion of the elementary theory of the convergence of Dirichlet's series followed by a look at the formula for the sum of the coefficients of a Dirichlet's series in terms of the order of the function represented by the series They continue with an examination of the summation of series by typical means and of general arithmetic theorems concerning typical means After a survey of Abelian and Tauberian theorems and of further developments of the theory of functions represented by Dirichlet's series the text concludes with an exploration of the multiplication of Dirichlet's series

Principles of Stellar Dynamics S. Chandrasekhar, 2005-05-13 In this classic text a Nobel Prize winning astrophysicist presents the theory of stellar dynamics as a branch of classical dynamics a discipline in the same general category as celestial mechanics His method offers the advantages of clarifying the theory's fundamental issues and defining its underlying motivations S Chandrasekhar investigates two areas The first concerns problems in which the time of relaxation of a stellar system is central His method consists of analyzing the effects of stellar encounters in terms of the two body problem of classical dynamics and applying this theory to the dynamics of star clusters The second area investigates problems centering around Liouville's theorem and the solutions of the equation of continuity here the author discusses the dynamic implications of the existence of a field of differential motions which appears to be the most striking kinematic feature of the galaxy and the extragalactic systems This edition includes two papers by the author that were published after *Principles of Stellar Dynamics* and that have been studied and quoted extensively *New Methods in Stellar Dynamics* originally published in the *Annals of the New York Academy of Sciences* and *Dynamical Friction* originally published in *The Astrophysical Journal*
