Countries Forrest Daniel Wright, 2015-11-19. Why are some countries rich while others are poor? Why are some well governed while others experience frequent conflict? And how do you measure a country's true success anyway? Social scientists have attempted to answer these types of questions for decades and have increasingly turned to data for this task. *Researching Developing Countries: A Data Resource Guide for Social Scientists* serves as a reference guide for social scientists and students interested in answering these complex questions. The book will also be helpful to librarians serving the social science disciplines. Topics covered in the book include human development, economics, governance, conflict, demographics, migration and refugees, environment, foreign aid, energy and infrastructure, innovation and entrepreneurship, geography and urban development, and public opinion. Covers over 30 countries with emerging markets. Explores a wide array of topics for each country and their investment opportunities. Includes a focus on international audiences as the book expands beyond the US market. *Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles* Peter Gill, Øyvind

Bleka, Oskar Hansson, Corina Benschop, Hinda Haned, 2020-06-10. Over the past twenty years there's been a gradual shift in the way forensic scientists approach the evaluation of DNA profiling evidence that is taken to court. Many laboratories are now adopting probabilistic genotyping to interpret complex DNA mixtures. However, current practice is very diverse where a whole range of technologies are used to interpret DNA profiles and the software approaches advocated are commonly used throughout the world. *Forensic Practitioner's Guide to the Interpretation of Complex DNA Profiles* places the main concepts of DNA profiling into context and fills a niche that is unoccupied in current literature. The book begins with an introduction to basic forensic genetics covering a brief historical description of the development and harmonization of STR markers and national DNA databases. The laws of statistics are described along with the likelihood ratio based on Hardy Weinberg equilibrium and alternative models considering sub structuring and relatedness. The historical development of low template mixture analysis theory and practice is also described so the reader has a full understanding of rationale and progression. Evaluation of evidence and statement writing is described in detail along with common pitfalls and their avoidance. The authors have been at the forefront of the revolution having made substantial contributions to theory and practice over the past two decades. All methods described are open source and freely available supported by sets of test data and links to web

sites with further information This book is written primarily for the biologist with little or no statistical training However sufficient information will also be provided for the experienced statistician Consequently the book appeals to a diverse audience Covers short tandem repeat STR analysis including database searching and massive parallel sequencing both STRs and SNPs Encourages dissemination and understanding of probabilistic genotyping by including practical examples of varying complexity Written by authors intimately involved with software development training at international workshops and reporting cases worldwide using the methods described in this book
