

EXPERIMENTAL DESIGN

Experimental design refers to the systematic approach and structure employed in conducting scientific experiments to investigate cause-and-effect relationships between variables.

DEFINITION

Experimental design involves the careful manipulation of an independent variable while controlling and measuring other variables to assess their impact on the dependent variable. It is considered better than observational design when it comes to inferring cause-and-effect.

TYPES

- **Quasi-experimental design** includes some control over variables but falls short of the random assignment of participants to conditions.
- **True experimental design** incorporates random assignment of participants to different conditions, allowing for stronger causal inferences to be made.

Smith, 2005-01-01 Many products such as foods personal care products beverages and cleaning agents are made by mixing ingredients together This book describes a systematic methodology for formulating such products so that they perform according to one s goals providing scientists and engineers with a fast track to the implementation of the methodology Experimental Design for Formulation contains examples from a wide variety of fields and includes a discussion of how to design experiments for a mixture setting and how to fit and interpret models in a mixture setting It also introduces process variables the combining of mixture and nonmixture variables in a designed experiment and the concept of collinearity and the possible problems that can result from its presence Experimental Design for Formulation is a useful manual for the formulator and can also be used by a resident statistician to teach an in house short course Statistical proofs are largely absent and the formulas that are presented are included to explain how the various software packages carry out the analysis Many examples are given of output from statistical software packages and the proper interpretation of computer output is emphasized Other topics presented include a discussion of an effect in a mixture setting the presentation of elementary optimization methods and multiple response optimization wherein one seeks to optimize more than one response **Experimental Design for Biologists** David J. Glass, 2007 The effective design of scientific experiments is critical to success yet graduate students receive very little formal training in how to do it Based on a well received course taught by the author Experimental Design for Biologists fills this gap

Experimental Design for Biologists explains how to establish the framework for an experimental project how to set up a system design experiments within that system and how to determine and use the correct set of controls Separate chapters are devoted to negative controls positive controls and other categories of controls that are perhaps less recognized such as assumption controls and experimentalist controls Furthermore there are sections on establishing the experimental system which include performing critical system controls Should all experimental plans be hypothesis driven Is a question answer approach more appropriate What was the hypothesis behind the Human Genome Project What color is the sky How does one get to Carnegie Hall The answers to these kinds of questions can be found in Experimental Design for Biologists Written in an engaging manner the book provides compelling lessons in framing an experimental question establishing a validated system to answer the question and deriving verifiable models from experimental data Experimental Design for Biologists is an essential source of theory and practical guidance in designing a research plan
