Exploding Ants Joanne Settel,1999-01 *Exploding Ants* Joanne Settel,2014-04-08 A wasp lays its eggs under a caterpillar's skin so that its young can eat the caterpillar's guts as they grow A young head louse makes its home on a human hair and feasts on human blood Frogs use their eyeballs to help swallow their food From small worms that live in a dog's nose mucus to exploding ants to regurgitating mother gulls this book tells of the unusual ways animals find food shelter and safety in the natural world If animals all ate the same things and lived in the same places it would be impossible for all of them to survive So they specialize Some animals eat the bits that others leave behind such as skin and mucus They find all kinds of unusual places to shelter including the cracks and holes in another creature's skin or its internal organs They use their own bodies to protect themselves from predators by imitating unsavory items such as bird droppings and even by blowing up These habits that may seem disgusting to us are wonderful adaptations that make it possible for a great variety of creatures to live and thrive on Earth Read about them and marvel at the amazing ways animals adapt to the natural world

Mulinge, 2013 The term climate change is used to denote any significant but extended change in the measures of climate The changes could be due to natural variability or as a result of human activities such as the burning of fossil fuels to produce energy deforestation industrial processes and some agricultural practices Such activities release large amounts of carbon dioxide and other greenhouse gases into the atmosphere that hang like a blanket around the earth thus trapping energy in the atmosphere and causing it to warm up This results increasingly in climate variability which is characterised by extreme seasonal annual temporal and non spatial variability in temperature vagaries of precipitation rainfall patterns and amounts and or wind patterns occurring over a prolonged period of time The last decade 2001 2010 has been the warmest on record with the average temperatures reaching 0 46 C above the 1961 1990 mean and 0 21 C warmer than the 1991 2000 period It has been proved that the African continent is warming up faster all year round than the global average a trend that is likely to continue By the year 2100 it is predicted that temperature changes will fall into ranges of about 1 4 C to nearly 5 8 C increase in mean

surface temperature compared to 1990 and the mean sea level will rise between 10cm to 90 cm AMCEN 2011 The interior of semiarid margins of the Sahara and central southern Africa will be the most affected by such warming AMCEN 2011 To tackle the phenomenon of climate change effectively human societies have put in place a combination of mitigation and adaptation mechanisms and strategies Whereas mitigation aims at avoiding or lessening the impacts of the unmanageable the goal of adaptation is to manage the unavoidable That men and women are affected differently by climate change suggests that they also differ in terms of the adaptation mechanisms they employ Despite the existence of gender based differences in the effects of climate change and in adaptation and coping strategies studies on the gender differential impacts of climate change and variability on women in general and pastoralist women in particular in sub Saharan Africa are limited This volume offers insights and knowledge that pastoralist women developed on climate change adaptation through their experiences in their households and communities and thereby tries to narrow this gap
