

Exercise No. 5:

Meteorology: Weather and Climate

Introduction

Meteorology is the science that deals with the atmosphere and related phenomena. In this field of science, research areas include weather, weather forecasting, and atmospheric composition. Weather, is the state of the atmosphere at a particular time and place. The elements of weather include temperature, humidity, cloudiness, precipitation, wind, and pressure. These elements are organized into various weather systems, such as monsoons, areas of high and low pressure, thunderstorms, and tornadoes. All weather systems have well defined cycles and structural features, and are governed by the laws of heat and motion. These conditions are studied in meteorology, the science of weather and weather forecasting.

Weather differs from climate, which is the weather that a particular region experiences over a long period of time. Climate includes the averages and variations of all-weather elements. Meteorologists have developed several sophisticated instruments that measure multiple physical characteristics of the air simultaneously and at more than one location. The most important of these are Doppler radar, and weather satellites.

Weather forecasts provide critical information regarding the weather. It is important that weather forecasts be as accurate as possible because many people depend upon them. The presence of clouds in the sky is one type of signal to meteorologist that weather changes are imminent. Clouds form when solar heating of the earth's surface warms the air near the ground. This air begins to rise and it expands and cools. Water vapor then condenses on small dust particles suspended in the air and these combine to form clouds. Clouds are also formed when large masses of air collide. In both cases, the type of cloud created is determined by how fast the air rises.

Learning Outcome(s)

1. In this exercise, the students will be able to identify some instruments used for recording weather and the different types of clouds as an indicator of changing weather condition.
