Planning and Design for Sustainable Urban Mobility Un-Habitat,2013-10-30 Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus

on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **Smart Cities** Fateh Belaïd, Anvita Arora, 2023-09-30 This edited volume discusses the socioeconomic environmental and policy implications of smart cities Written by international experts in energy economics and policy the chapters present wide range of high quality theoretical and empirical studies at the nexus of social entrepreneurial governmental and ecological transformation The book covers a wide range of topics with a view towards providing empirical evidence of the benefits of smart cities as well as practical frameworks for smart city initiatives Topics discussed include smart city transition pillars innovation for smart and sustainable cities design and implementation smart city governance smart mobility within cities and smart cities in emerging economies This volume will be of use to students and researchers interested in resource economics energy economics sustainability ICT and governance as well as policymakers working on smart city initiatives This is an open access book
