

EXPERIMENT No #1

Gradation of Fine Aggregate by Sieve analysis (ASTM C-136)

OBJECTIVE:

This test method covers the determination of the particle size distribution of fine aggregates by sieving.

APPARATUS

Weighing machine, ASTM Standard sieve set, pan & electric sieve shaker.

Figure1: ASTM Standard sieve set.

THEORETICAL BACKGROUND:

The purpose of the sieve analysis is to check the aggregate that we are using is suitable for use and fulfill our requirement or not. If the requirements come between fines range then the aggregate is suitable for use in any construction work. It also gives information about the maximum number of size aggregates present in the sample. For fine aggregate the fines modulus must be between 2.3 and 3.2, is recommended by ASTM. If else this value then the fine aggregate is not suitable for use in any construction work.
