1. Pumpkins for sale

Carving pumpkins into jack-o'-lanterns is a traditional Halloween activity. Halloween falls on October 31 and this time of year it is common to see pumpkins for sale at farmers' markets.

One local farmer wants you to help them figure out how much each pumpkin should sell for and calculate the total value of all of their pumpkins. Write a program called `market.py` that computes the value of each pumpkin the farmer has for sale that day and how much money they will sell for in total. The farmer plans to sell each pumpkin for $1.41 per pound.

Three examples of the running program are shown below. User input is shown in **bold**.

```
$ python3 market.py
How many pumpkins are for sale? 3

pumpkin 1
How many pounds does this pumpkin weigh? 4
This pumpkin should sell for $5.64

pumpkin 2
How many pounds does this pumpkin weigh? 14
This pumpkin should sell for $19.74

pumpkin 3
How many pounds does this pumpkin weigh? 7
This pumpkin should sell for $9.87

The total value of all of your pumpkins is $35.25
```

You *do not* need to format the price so that it only shows two decimal places:

```
$ python3 market.py
How many pumpkins are for sale? 2

pumpkin 1
How many pounds does this pumpkin weigh? 10
This pumpkin should sell for $14.1

pumpkin 2
How many pounds does this pumpkin weigh? 6
This pumpkin should sell for $8.459999999999999

The total value of all of your pumpkins is $22.56
```

Sometimes the farmer has no pumpkins for sale!

```
$ python3 market.py
How many pumpkins are for sale? 0

The total value of all of your pumpkins is $0.0
```

experience with computer programming some of the programming topics discussed in this text may be a bit redundant however your previous programming classes likely focused on application development The use of the C programming language and assembly language in this text is geared more toward systems programming Unlike application programming systems programming is more tied to the underlying hardware architecture than application programming Because of this systems programming and assembly language help reinforce an understanding of computer architecture   Current Problems of University Management Tadeusz Wawak ,2014 The quality of teaching in higher education has been widely discussed for years in Poland and abroad alike As regards our domestic situation the problem has been intensifying since our transformation in 1989 due to the increase in the number of private universities experiencing difficulties in providing adequate academic staff for didactic purposes These types of problems are also noticeable abroad especially in the context of the requirements imposed by the Bologna Process and the recommendations of the European Union That is why an international research project came into being The project was financed by the Department of Applied Economics of the Jagiellonian University and it was joined by universities from the USA Ukraine Russia Algeria Germany and Poland The results of the research carried out under the auspices of Professor Tadeusz Wawak have been presented in the present monograph It can be noticed that the problems which particular universities are struggling with are similar It is also important to say that the completion of the tasks in the scope of pro quality management restructuring at the university demands the implementation of the principles of Total Quality Management Excerpt from the review by Professor Stanis aw Tkaczyk The book focuses on the problems of university management The authors of individual chapters are educational researchers from the USA Russia Algeria the Ukraine and Poland Each of them presents problems existing in their own academic environment on the basis of their personal experience Thus the reader is presented with a full range of currently discussed topics by the institutions responsible for the functioning of the system of education They comprise among others New Economy promoting New University the process of globalization and integration the Bologna Process with adjustment to its recommendations and the internationalization of higher education A comprehensive analysis of the condition of the Ukrainian academic education deserves special attention Not only does it describe its present state but it also contains its critical assessment and a series of proposals including the need to implement the necessary structural changes in this area and to create a comprehensive system improving the quality of university management Additionally the book contains descriptions of new technologies and concepts of education which have emerged recently in the context of the required procedural reform as well as interesting research findings carried out among students in Algeria Excerpt from the review by Professor Tadeusz Grabi ski   **Hybrid System Identification** Fabien Lauer,Gérard Bloch,2018-10-04 Hybrid System Identification helps readers to build mathematical models of dynamical systems switching between different operating modes from their experimental observations It provides an overview of the interaction between system identification machine

learning and pattern recognition fields in explaining and analysing hybrid system identification It emphasises the optimization and computational complexity issues that lie at the core of the problems considered and sets them aside from standard system identification problems The book presents practical methods that leverage this complexity as well as a broad view of state of the art machine learning methods The authors illustrate the key technical points using examples and figures to help the reader understand the material The book includes an in depth discussion and computational analysis of hybrid system identification problems moving from the basic questions of the definition of hybrid systems and system identification to methods of hybrid system identification and the estimation of switched linear affine and piecewise affine models The authors also give an overview of the various applications of hybrid systems discuss the connections to other fields and describe more advanced material on recursive state space and nonlinear hybrid system identification Hybrid System Identification includes a detailed exposition of major methods which allows researchers and practitioners to acquaint themselves rapidly with state of the art tools The book is also a sound basis for graduate and undergraduate students studying this area of control as the presentation and form of the book provides the background and coverage necessary for a full understanding of hybrid system identification whether the reader is initially familiar with system identification related to hybrid systems or not **Engineering Instruction for High-Ability Learners in K-8 Classrooms** National Assoc For Gifted Children,Alicia Cotabish,2021-09-03 Engineering Instruction for High Ability Learners in K 8 Classrooms is an application based practitioners guide to applied engineering that is grounded in engineering practices found in the new Next Generation Science Standards NGSS and the Standards for Engineering Education The book provides educators with information and examples on integrating engineering into existing and newly designed curriculum The book specifies necessary components of engineering curriculum and instruction recommends appropriate activities to encourage problem solving creativity and innovation and provides examples of innovative technology in engineering curriculum and instruction Additionally authors discuss professional development practices to best prepare teachers for engineering instruction and provide recommendations to identify engineering talent among K 8 students Finally the book includes a wealth of resources including sample lesson and assessment plans to assist educators in integrating engineering into their curriculum and instruction **Indian National Bibliography** B.
