**Conservation for Cities** Robert I. McDonald, 2015 *Planning with Landscape: Green Infrastructure to Build Climate-Adapted Cities* Camila Gomes Sant'Anna, Ian Mell, Luciana Bongiovanni Martins Schenk, 2023-03-01 This edited volume examines how to develop a planning and design process with green infrastructure that creates technical answers to the social and ecological function of the city's climate change adaptations demands In this context it proposes a process that engage the values linked to the art and culture of the place capable of generating adoption by the population and promoting the right to landscape Since the nineteenth century many theoretical and practical experiences have integrated urban and environmental issues revising the understanding of nature as an object and thinking of nature and culture in conjunction However consensus of the methodological strategies needed to guide the development of multi scale landscape planning and design capable of responding to the climate emergency heritage water biodiversity and social inclusion among other issues has not been achieved Green infrastructure has emerged as a tool to link considerations of the planning and design process to examine the impact urban nature can have at a global and a local scale The book gathers together authors from different parts of the world and disciplines to showcase conceptual thinking best practices and methodological strategies relating to landscape planning and design with green infrastructure adapted to climate change The topic of this book is particularly relevant to scholars practitioners and developers around the world who have an interest in planning and environmental management landscape architecture and socio cultural understandings of landscape

**Biophilic Cities for an Urban Century** Robert McDonald, Timothy Beatley, 2020-09-25 This book argues that paradoxically at their moment of triumph and fastest growth cities need nature more than ever Only if our urban world is full of biophilic cities will the coming urban century truly succeed Cities are quintessentially human the perfect forum for interaction and we are entering what could justly be called the urban century the fastest period of urban growth in human history Yet a growing body of scientific literature shows that the constant interaction the hyper connectedness of cities leads to an urban psychological penalty Nature in cities can be solution to this dilemma allowing us to have all the benefits of our urban connected world yet also have that urban home be a place where humanity can thrive This book presents best practices and case studies from biophilic design showing how cities around the world are beginning to incorporate nature into their urban fabric It will be a valuable resource for scholars and professionals working in the area of sustainable cities

Agents and Implications of Landscape Pattern Dean L Urban, 2023-10-11 This is an ecology textbook focused on key principles that underpin research and management at the landscape scale It covers 1 agents of pattern the physical template

biotic processes and disturbance regimes 2 scale and pattern why scale matters how to scale with data and inferences using landscape pattern metrics and 3 implications of pattern for metapopulations communities and biodiversity and ecosystem processes The last two chapters address emerging issues urban landscapes and adapting to climate change This book stems from two graduate level courses in Landscape Ecology taught at the Nicholas School of the Environment at Duke University The subject has evolved over time from a concepts based overview of what landscape ecology is to a more applied practicum on how one does landscape ecology As landscape ecology has matured as a discipline its perspectives on spatial heterogeneity and scale have begun to permeate into a wide range of other fields including conservation biology ecosystem management and ecological restoration Thus this textbook will bring students from diverse backgrounds to a common level of understanding and will prepare them with the practical knowledge for a career in conservation and ecosystem management

### Sustainable Development in Changing Complex Earth Systems Attila Kerényi,Richard William

McIntosh,2019-11-09 This book applies system theory to analyze the operation and structure of the complex earth surface

system including the interactions between society and nature that cause environmental degradation and threats to human populations The possible ways to harmonize the operation of a global society as a complex system using the United Nations sustainable development goals are investigated as well as the major efforts currently implemented to achieve this objective and why many are unsuccessful Readers will learn this material through case studies that assess the essential conditions required to occupy a planet sustainably and examine the complex interactions between society and nature in the atmosphere hydrosphere biosphere and outer layers of the lithosphere The book is written for undergraduate students in geography earth sciences environmental sciences and ecology and will also appeal to environmental agency employees nature protection representatives teachers and researchers

Engineering and Ecosystems Bhavik R. Bakshi, 2023-11-22 This book demonstrates how the inclusion of nature in engineering decisions results in innovative solutions that are economically feasible ecologically viable and socially desirable It advances progress toward nature positive decisions by protection and restoration of ecosystems and respect for ecological boundaries The topic of this book is an active area of academic research and leading companies are including goals associated with ecosystem services in their sustainability plans This book is the first collection of methods and applications that explicitly include the role of nature in supporting engineering activities and describes the role that ecosystems play in supporting technology and industry It describes approaches models applications and challenges for innovation and sustainability that will be useful to students and practitioners

*Nature Driven Urbanism* Rob Roggema, 2019-10-03 This book discusses the way that a nature driven approach to urbanism can be applied at each of the urban scales architectural design urban design of neighborhoods city planning and landscape architecture and at the city and regional scales At all levels nature driven approaches to design and planning add to the quality of the built structure and furthermore to the quality of life experienced by people living in these environments To include nature and greening to built structures is a good starting point and can add much value The chapter authors have fiducia in giving nature a fundamental role as an integrated network in city design or to make nature the entrance point of the design process and base the design on the needs and qualities of nature itself The highest existence of nature is a permanent ecosystem which endures stressors and circumstances for a prolonged period In an urban context this is not always possible and temporality is an interesting concept explored when nature is not a permanent feature The ecological contribution to the environment and indirect dispersion of species from a temporary location will overall add biodiversity to the entire system

Come Hell or High Fever Russell W Glenn, 2023-01-24 Nations appear and fall but cities endure and rediscover how to succeed In this meticulously defined and researched book Glenn presents ideas for minimising suffering during urban catastrophes His urgency identifies risks held in urban areas by 3.5 billion people These people are many of us as urban populations occupying 3 per cent of our planet's land area drawing water from 41 per cent of the world's ground surface consuming 60 to 80 per cent of global energy and achieving 80 per cent of the world's economic productivity For Glenn our resilience through diversity in

preparation survival and recovery includes comprehensive approaches that are sustained in duration orchestrated in bringing all necessary capabilities to bear layered in approach and early in application Major General Chris Field Australian Army The time to prepare for the inevitable is now Dr Glenn has written a book that should be read by all leaders planners and responders who may be called upon in an urban disaster whether natural or man made Military leaders should give it particular attention as the human race is increasingly concentrated in its cities Understanding how to wage war in dense urban terrain is essential especially if a nation also seeks to hold the moral high ground The fruits of any victory won among people that fails to consider the lessons in Come Hell or High Fever are likely to be very bitter Lieutenant General Sean MacFarland United States Army retired Greenspace-Oriented Development Julian Bolleter,Cristina E.

Ramalho,2019-09-24 Transit Oriented Development TOD planning principles have informed Australian city planning for over two decades As such policy makers and planners often unquestioningly apply its principles In contrast this book critiques TOD and argues that while orientating development towards public transport hubs makes some sense the application of TOD principles in Australia has proven a significant challenge As a complementary strategy the book stakes out the potential of Greenspace Oriented Development GOD in which urban density is correlated with upgraded green spaces with reasonable access to public transport Concentrating urban densification around green spaces offers many advantages to residents including ecosystem services such as physical and mental health benefits the mitigation of extreme heat events biodiversity and clean air and water Moreover the open space and leafy green qualities of GOD will ensure it resonates with the lifestyle aspirations of suburban residents who may otherwise resist urban densification We believe in this way that GOD could be an urban dream that befits the challenges of this 21st century Nature-Based Solutions for Building Resilience in Towns and Cities

Asian Development Bank,2016-12-01 Urban populations are projected to increase from 54% to 66% of the global population by 2050 with close to 90% of the increase concentrated in Asia and Africa Cities and towns a growing source of greenhouse gas emissions will need to address challenges posed by climate change A nature based approach in identifying climate change vulnerabilities and developing relevant adaptation options was conducted in three towns of the Greater Mekong Subregion Working with local governments nongovernment organizations women s groups and professional associations town wide adaptation measures were defined by overlaying climate change projections on town plans and zoning schemes for strategic infrastructure This publication captures valuable experience and lessons from the project **Design**
