The Global Governance of Genetic Resources

Florian Rabitz, 2017-04-28

How is access to genetic resources and the equitable sharing of the benefits arising out of their use to be guaranteed Exploring the subject comparatively with regard to intellectual property rights food and agriculture health and access to oceans this book creates a new theory of change in multilevel global governance

Public Policies in Shared Societies M. Fitzduff, 2013-10-17

Communities throughout the world are increasingly diverse in their racial ethnic and religious make up Using examples drawn from over 50 countries in a variety of fields from economics to education this book explores how governmental economic and social institutions are adapting their policies to create more cohesive and peaceful societies

Species, Science and Society Quentin Wheeler, 2023-07-06 This book presents an engaging and accessible examination of the role of systematic biology in species exploration and biodiversity conservation Our planet and systematic biology are at a crossroads Millions of species face an imminent threat of extinction and with knowledge of only a fraction of earth's species we are unprepared to respond Species Science and Society explains what is at stake if we continue to ignore the traditional mission of systematics Rejecting claims that it is too late to document earth's species that molecular evidence is sufficient and that comparative morphology and the grand traditions of systematics are outdated this book makes a compelling argument for a taxonomic renaissance The book challenges readers to rethink assumptions about systematics Shattering myths and misconceptions and clarifying the role of systematics in confronting mass extinction it hopes to inspire a new generation of systematists Readers are given a deeply personal view of the mission motivations and rewards of systematic biology Written in narrative style with passion wit and optimism it is the first book to question the growing dominance of molecular data defend descriptive taxonomy and propose a mission to discover describe and classify all species Our evolutionary heritage the fate of society and the future of the planet depend on what we do next This book will be of great interest to academics researchers and professionals working in systematics taxonomy and biodiversity conservation as well as students with a basic background in biology

Religion and Nature Conservation Radhika Borde, Alison A Ormsby, Stephen M Awoyemi, Andrew G Gosler, 2022-10-31 This book presents a broad array of global case studies exploring the interaction between religion and the conservation of nature from the viewpoints of the religious practitioners themselves With conservation and religion often being championed as allies in the quest for a sustainable world where humans and nature flourish this book provides a much needed compendium of detailed examples where religion and conservation science have been brought together Case studies cover a variety of religions faiths and practices including traditional Indigenous Buddhism Christianity Hinduism Islam Jainism Judaism Shinto and Zoroastrianism Importantly this volume gives voice to the religious practitioners and adherents themselves Beyond an exercise in anthropology ethnobiology and comparative religion the book is an applied work seeking the answer to how in a world of nearly eight billion people we might help our own species to prevent the extinction of life This book will be of great interest to students and scholars of nature conservation environment and religion cultural

geography and ethnobiology as well as practitioners and professionals working in conservation **Intellectual Property and the New International Economic Order** Sam F. Halabi, 2018-04-19 In economic sectors crucial to human welfare agriculture education and medicine a small number of firms control global markets primarily by enforcing intellectual property IP rights incorporated into trade agreements made in the 1980s onward Such rights include patents on seeds and medicines copyrights for educational texts and trademarks in consumer products According to conventional wisdom these agreements likewise ended hopes for a New International Economic Order under which wealth would be redistributed from rich countries to poor Sam F Halabi turns this conventional wisdom on its head by demonstrating that the New International Economic Order never faded but rather was redirected by other treaties formed outside the nominally economic sphere that protected poor countries interests in education health and nutrition and resulted in redistribution and regulation This illuminating work should be read by anyone seeking a nuanced view of how IP is shaping the global knowledge economy

Redesigning the Global Seed Commons Christine Frison, 2018-11-08 There is much current controversy over whether the rights to seeds or plant genetic resources should be owned by the private sector or be common property This book addresses the legal and policy aspects of the multilateral seed management regime First it studies in detail the International Treaty on Plant Genetic Resources for Food and Agriculture the Treaty in order to understand and identify its dysfunctions Second it proposes solutions using recent developments of the theory of the commons to improve the collective seed management system of the Treaty a necessary condition for its member states to reach the overall food security and sustainable agriculture goals Redesigning the Global Seed Commons provides a significant contribution to the current political and academic debates on agrobiodiversity law and governance and on food security and food sovereignty by analyzing key issues under the Treaty that affect the design and implementation of regulatory instruments managing seeds as a commons It also examines the practical legal political and economic problems encountered in the attempt to implement these obligations in contemporary settings In particular it considers how to improve the Treaty implementation by proposing ways for Contracting Parties to better reach the Treaty s objectives taking a holistic view of the human seed ecosystem Following the tenth anniversary of the functioning the Treaty s multilateral system of access and benefit sharing which is currently under review by its Contracting Parties this book is well timed to examine recent developments in the field and guide the current review process to design a truly Global Seed Commons **Legal Aspects of Sustainable Development**

Volker Mauerhofer, 2015-11-26 This book addresses legal aspects of sustainable development and offers the latest thinking on a wide range of current themes By taking a cross cutting approach it adds considerably to the exploration of this emerging scientific field Twenty nine original contributions present innovative thoughts and replicable ideas from this exciting new area which will be of value to practitioners and researchers alike These contributions are allocated into a horizontal and sectorial part The section covering horizontal policies has five sub parts 1 general aspects 2 human and intellectual property

rights 3 communication and social enterprise governance 4 public participation and 5 assessment tools The second part on sectorial policies also has five sub parts 1 forest and water management 2 renewable energy 3 cities waste and material management 4 biodiversity nature conservation oceans and spatial planning and 5 agriculture and rural policy It offers a multifaceted discussion of sustainable development and law by authors from five continents and from both the public and the private sectors This selection guarantees a broad view that presents the more theoretical arguments from the academic as well as the practical perspective Furthermore the authorship includes senior highly experienced academics and practitioners as well as those at the start of their career This ensures thoughtful expansions of established theories as well as the emergence of innovative ideas Moreover the ten sub parts bring together likeminded thoughts resulting in an exchange of different viewpoints on a similar theme This allows the readers to concentrate on individual chapters while at the same time discovering a variety of thoughts and ideas

Sustainable Environmental Management Jatna Supriatna, Ralph Lenz, 2025-08-02 Environmental sustainability in the developing world is the focus of this book Our purpose will not however be to produce an endless list of huge numbers of facts about the many developing countries Indonesia could be considered a proto typical example of a developing world country As an archipelago situated along the equator in Southeast Asia its location is ideal for a prototype almost all developing countries are tropical Kalimantan Sumatra and Papua in particular contain a substantial portion of the

world's remaining equatorial rainforests rainforest management is among the most pressing global sustainability problems. However, Indonesia's forests are far from monolithic; they include a large set of different biome types. Indonesia's population is multi-ethnic, a characteristic not only of other very large developing countries like India and Nigeria but of nearly every African country and of many other formerly colonized regions. Another factor favoring a prototype designation is a relatively recent escape from the category of severe underdevelopment. Indonesia ranked eighth in the world in real per capita GDP growth rate between 1960 and 2018, not an atypical outcome for Southeast Asian market economies. Thailand, Malaysia, Singapore, and Myanmar ranked even higher. EarthTrends of World Resources Institute. Like most developing countries, economic growth has mainly been sparked by exports of energy and mineral extraction products and plantation crops. There is also manufacturing growth. Indonesia has seven million cities and the world's sixth largest metro area by population. At the same time, many of the population remain engaged in agriculture; many are extremely impoverished. Environmental problems Indonesia encounters in its path to economic development are typical of those in other developing countries, and solutions it may find can serve as guidelines for other developing countries anticipating a similar economic take-off. This book consists of 21 chapters on sustainability efforts in Indonesia by many stakeholders: government, local government, private sectors, NGOs, and communities.

Valuing Ecosystem Services K. N. Ninan, 2014-08-29. This thought-provoking book draws together prominent international authorities to discuss the key methodological issues and challenges in valuing ecosystem services. Covering a cross-section of ecosystems and services in different sites, countries, and

Viral Sovereignty and Technology Transfer Sam F. Halabi, Rebecca Katz, 2020-06-11. In the global infectious disease research community, there has long been uncertainty about the conditions under which biological resources may be studied or transferred out of countries. This work examines the reasons for that uncertainty and shows how global biomedical research has been shaped by international disputes over access to biological resources. Bringing together government leaders, World Health Organization officials, and experts in virology, wildlife biology, clinical ethics, technology transfer, and international law, the book identifies the critical problems and implications of these problems posed by negotiating for access and sharing benefits and proposes solutions to ensure that biomedical advances are not threatened by global politics. Written in accessible, non-technical language, this work should be read by anyone who sees global health and biomedical research as a priority for international lawmakers.

Routledge Handbook of the Study of the Commons Blake Hudson, Jonathan Rosenbloom, Dan Cole, 2019-01-04. This comprehensive Handbook serves as a unique synthesis and resource for understanding how analytical frameworks developed within the literature assist in understanding the nature and management of commons resources. Such frameworks include those related to Institutional Analysis and Development, Social Ecological Systems, and Polycentricity, among others. The book aggregates and analyses these frameworks to lay a foundation for exploring how they apply according to scholars across a wide range of disciplines. It includes an exploration of the unique problems arising in different disciplines of commons study.

including natural resources forests oceans water energy ecosystems etc economics law governance the humanities and intellectual property It shows how the analytical frameworks discussed early in the book facilitate interdisciplinarity within commons scholarship This interdisciplinary approach within the context of analytical frameworks helps facilitate a more complete understanding of the similarities and differences faced by commons resource users and managers the usefulness of the commons lens as an analytical tool for studying resource management problems and the best mechanisms by which to formulate policies aimed at addressing such problems Chapter 26 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license

Mountain Geography Martin F. Price, Alton C. Byers, Donald A. Friend, Thomas Kohler, Larry W. Price, 2013-08-24 Mountains cover a quarter of the Earth's land surface and a quarter of the global population lives in or adjacent to these areas The global importance of mountains is recognized particularly because they provide critical resources such as water food and wood contain high levels of biological and cultural diversity and are often places for tourism and recreation and of sacred significance This major revision of Larry Price's book *Mountains and Man* 1981 is both timely and highly appropriate The past three decades have been a period of remarkable progress in our understanding of mountains from an academic point of view Of even greater importance is that society at large now realizes that mountains and the people who reside in them are not isolated from the mainstream of world affairs but are vital if we are to achieve an environmentally sustainable future *Mountain Geography* is a comprehensive resource that gives readers an in depth understanding of the geographical processes occurring in the world's mountains and the overall impact of these regions on culture and society as a whole The volume begins with an introduction to how mountains are defined followed by a comprehensive treatment of their physical geography origins climatology snow and ice landforms and geomorphic processes soils vegetation and wildlife The concluding chapters provide an introduction to the human geography of mountains attitudes toward mountains people living in mountain regions and their livelihoods and interactions within dynamic environments the diverse types of mountain agriculture and the challenges of sustainable mountain development
