Linguistic Fundamentals for Natural Language Processing Emily M. Bender,2022-05-31 Many NLP tasks have at their core a subtask of extracting the dependencies who did what to whom from natural language sentences This task can be understood as the inverse of the problem solved in different ways by diverse human languages namely how to indicate the relationship between different parts of a sentence Understanding how languages solve the problem can be extremely useful in both feature design and error analysis in the application of machine learning to NLP Likewise understanding cross linguistic variation can be important for the design of MT systems and other multilingual applications The purpose of this book is to present in a succinct and accessible fashion information about the morphological and syntactic structure of human languages that can be useful in creating more linguistically sophisticated more language independent and thus more successful NLP systems Table of Contents Acknowledgments Introduction motivation Morphology Introduction Morphophonology Morphosyntax Syntax Introduction Parts of speech Heads arguments and adjuncts Argument types and grammatical functions Mismatches between syntactic position and semantic roles Resources Bibliography Author s Biography General Index Index of Languages

Constraint Programming and Constraint Solving in particular Constraint Logic Programming appear to be a very promising platform perhaps the most promising present platform for bringing forward the state of the art in natural language processing this due to the naturalness in specification and the direct relation to efficient implementation Language in the present context may refer to written and spoken language formal and semiformal language and even general input data to multimodal and pervasive systems which can be handled in very much the same ways using constraint programming The notion of constraints with slightly differing meanings apply in the characterization of linguistic and cognitive phenomena in formalized linguistic models as well as in implementation oriented frameworks Programming techniques for constraint solving have been and still are in a period with rapid development of new efficient methods and paradigms from which language processing can profit A common metaphor for human language processing is one big constraintsolving process in which the different specified linguistic and cognitive phases take place in parallel and with mutual cooperation which fits quite well with current constraint programming paradigms *Natural Language Processing - NLP 2000* Dimitris N.

Christodoulakis, 2003-06-26 This volume contains the papers prepared for the 2nd International Conference on Natural Language Processing held 2-4 June in Patras Greece The conference program features invited talks and submitted papers covering a wide range of NLP areas text segmentation morphological analysis lexical knowledge acquisition and representation grammar formalism and syntactic parsing discourse analysis language generation man machine interaction machine translation word sense disambiguation and information extraction The program committee received 71 abstracts of which unfortunately no more than 50% could be accepted Every paper was reviewed by at least two reviewers The fairness of the reviewing process is demonstrated by the broad spread of institutions and countries represented in the accepted papers So many have contributed to the success of the conference The primary credit of course goes to the authors and to the invited speakers By their papers and their inspired talks they established the quality of the conference Secondly thanks should go to the referees and to the program committee members who did a thorough and conscientious job It was not easy to select the papers to be presented Last but not least my special thanks to the organizing committee for making this conference happen

Constraints and Language Philippe Blache, Henning Christiansen, Verónica Dahl, 2014-10-16 The concept of constraint is widely used in linguistics computer science and psychology However its implementation varies widely depending on the research domain namely language description knowledge representation cognitive modelling and problem solving These various uses of constraints offer complementary views on intelligent mechanisms For example in depth descriptions implementing constraints are used in linguistics to filter out syntactic or discursive structures by means of dedicated description languages and constraint ranking In computer science the constraint programming paradigm views constraints as a whole which can be used for example to build specific structures Finally in psycholinguistics experiments are carried out to investigate the role of constraints within cognitive processes both in comprehension and production with various applications such as dialog modelling for people with disabilities In this context *Constraints and Language* builds an extended overview of the use of constraints to model and process language This book will be useful for researchers willing to get a grip on the various uses of constraints in natural language processing and also as a class book for academic staff who want to set up advanced courses around the concept of constraint based natural language processing

Linguistic Resources for Natural Language Processing Max Silberztein, 2024-03-13 Empirical data driven neural network based probabilistic and statistical methods seem to be the modern trend Recently

OpenAI's ChatGPT, Google's Bard, and Microsoft's Sydney chatbots have been garnering a lot of attention for their detailed answers across many knowledge domains. In consequence, most AI researchers are no longer interested in trying to understand what common intelligence is or how intelligent agents construct scenarios to solve various problems. Instead, they now develop systems that extract solutions from massive databases used as cheat sheets. In the same manner, Natural Language Processing (NLP) software that uses training corpora associated with empirical methods are trendy, as most researchers in NLP today use large training corpora always to the detriment of the development of formalized dictionaries and grammars. Not questioning the intrinsic value of many software applications based on empirical methods, this volume aims at rehabilitating the linguistic approach to NLP. In an introduction, the editor uncovers several limitations and flaws of using training corpora to develop NLP applications, even the simplest ones such as automatic taggers. The first part of the volume is dedicated to showing how carefully handcrafted linguistic resources could be successfully used to enhance current NLP software applications. The second part presents two representative cases where data-driven approaches cannot be implemented simply because there is not enough data available for low resource languages. The third part addresses the problem of how to treat multiword units in NLP software, which is arguably the weakest point of NLP applications today, but has a simple and elegant linguistic solution. It is the editor's belief that readers interested in Natural Language Processing will appreciate the importance of this volume both for its questioning of the training corpus-based approaches and for the intrinsic value of the linguistic formalization and the underlying methodology presented.

Formalizing Natural Languages: Applications to Natural Language Processing and Digital Humanities Mariana González, Silvia Susana Reyes, Andrea Rodrigo, Max Silberstein, 2023-01-01

This book constitutes selected revised papers of the 16th International Conference on Formalizing Natural Languages Applications to Natural Language Processing and Digital Humanities (NooJ 2022) held in Rosario, Argentina, in June 2022. Due to the COVID-19 pandemic, the conference was held virtually. NooJ is a linguistic development environment that provides tools for linguists to construct linguistic resources that formalize a large gamut of linguistic phenomena: typography, orthography, lexicons for simple words, multiword units, and discontinuous expressions; inflectional, derivational, and agglutinative morphology; local phrase structure and dependency grammars, as well as transformational and semantic grammars. The 17 full papers presented were carefully reviewed and selected from 50 submissions. The papers are organized in the following topics: Morphological and Lexical Resources; Syntactic and Semantic Resources; Corpus Linguistics and Discourse Analysis; Natural Language Processing Applications.

Constraint Solving and Language Processing Denys Duchier, Yannick Parmentier, 2013-10-12

The Constraint Solving and Language Processing (CSLP) workshop considers the role of constraints in the representation of language and the implementation of language processing applications. This theme should be interpreted inclusively; it includes contributions from linguistics, computer science, psycholinguistics, and related areas, with a particular

interest in interdisciplinary perspectives Constraints are widely used in linguistics computer science and psychology How they are used however varies widely according to the research domain knowledge representation cognitive modelling problem solving mechanisms etc These different perspectives are complementary each one adding a piece to the puzzle

Theoretical Issues in Natural Language Processing Yorick Wilks, 2018-10-24 Accompanying continued industrial production and sales of artificial intelligence and expert systems is the risk that difficult and resistant theoretical problems and issues will be ignored The participants at the Third Tinlap Workshop whose contributions are contained in Theoretical Issues in Natural Language Processing remove that risk They discuss and promote theoretical research on natural language processing examinations of solutions to current problems development of new theories and representations of published literature on the subject Discussions among these theoreticians in artificial intelligence logic psychology philosophy and linguistics draw a comprehensive up to date picture of the natural language processing field *EPIA'89* Joao P.
