action patterns are created recreated and maintained Grounded advice to help readers respond to calls by industry for more collaborative forms of project organisation focused on value creation Perfect for researchers academics and advanced students of construction and similar disciplines Construction Project Organising is also a must read resource for construction professionals and the consultants who serve them **Innovation, Strategy and Risk in Construction** Martin

Loosemore,2013-12-04 Innovation Strategy and Risk in Construction integrates insights from business and government leaders with contemporary research to help built environment professionals turn serendipity to their own advantage by building greater innovative and adaptive capacity into their operations Accessible and full of practical examples the book argues that traditional business strategies which seek to systematise innovation and eliminate uncertainty need to be balanced with more flexible approaches which acknowledge and harness uncertainty The missing key to innovation it is argued is to turn serendipity into capability The author proposes a simple model which allows managers to tap into the increasingly dynamic and interconnected nature of the construction industry Innovation does not occur in isolation within individual firms but through collaboration Each stakeholder in the construction industry has a responsibility to drive innovation and this book will be key reading for consultants contractors subcontractors suppliers and clients as well as policy makers and all serious students of construction management The Sustainable City XI C.A. Brebbia,A.

Galiano-Garrigos,2016-09-21 Covering the proceedings of the 11th International Conference on Urban Regeneration and Sustainability held in Alicante Spain this volume addresses the multidisciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society Most of the earth s population live in cities and the process of urbanisation still continues to generate problems originating from the drift of the population towards them These problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the standard of living The process faces a number of challenges related to reducing pollution amd improving main transportation and infrastructure systems These challenges can contribute to the development of social and economic imbalances and require the development of new solutions Large cities are probably the most complex mechanisms to manage nevertheless they represent a productive ground for architects engineers city planners and social and political scientists able to conceive new ideas and time them according to technological advances and human requirements The Sustainable City XI follows a succession of very successful international conferences and covers the following fields Urban planning and design Urban development and management Urban conservation and regeneration The community and the city Eco town planning Landscape planning and design Environmental management Sustainable energy and the city Transportation Quality of life Socio economic and political considerations Cultural quarters and interventions Waterfront development Case studies sustainable practices Architectural issues Cultural heritage issues Appropriate technologies for smart cities Planning for resilience Disaster and emergency response Urban safety and security Waste management Urban

Human Resource Management in Construction Andrew Dainty, Martin Loosemore, 2013-05-07 The construction sector is one of the most complex and problematic arenas within which to manage people As a result the applicability of much mainstream human resource management HRM theory to this industry is limited Indeed the operational realities faced by construction organizations mean that all too often the needs of employees are subjugated by performance concerns This has potentially dire consequences for those who work in the industry for the firms that employ them and ultimately for the prosperity and productivity of the industry as a whole In this new edition of their leading text Andrew Dainty and Martin Loosemore have assembled a collection of perspectives which critically examine key aspects of the HRM function in the context of contemporary construction organizations Rather than simply update the previous edition the aim of this second edition is to provide a more critical commentary on the ways in which the industry addresses the HRM function and how this affects those who work within the industry To this end the editors have gathered contributions from many of the leading thinkers within construction HRM to critique the perspectives presented in the first edition Each contributor either tackles specific aspects of the HRM function or provides a critical commentary on industry practice The authors explain using real life case studies the ways in which construction firms respond to the myriad pressures that they face through their HRM practices Together the contributions encourage the reader to rethink the HRM function and its role in defining the employment relationship This provides essential reading for students of construction and project management and reflective practitioners who are interested in theoretically informed insights into industry practice and its implications

The Leadership of Organizational Change Mark Hughes, 2015-10-05 Understanding both leadership and change have been recurrent and popular themes within the business management and organization studies literature However our understanding of leadership and organizational change in combination is far more limited The Leadership of Organizational Change offers a critical review of the evolution of leadership and organizational change for the past thirty five years taking stock of what we know identifying what we do not know and establishing how the study of the leadership of change should advance In the late seventies and early eighties as interest in managing and leading change was fuelled by the competitive

threat of Asia in general and Japan in particular as perceived by western businesses and governments Burns 1978 writing in his landmark book *Leadership* at this time referred to an intellectual crisis The crisis of leadership today is the mediocrity or irresponsibility of so many of the men and women in power but leadership rarely rises to the full need for it The fundamental crisis underlying mediocrity is intellectual If we know all too much about our leaders we know far too little about leadership While the study of managing change has benefitted from sustained critical scrutiny particularly in the last decade it is believed that this is to have been at the expense of critical scrutiny of leading change The *Leadership of Organizational Change* critically reviews how the study of leading change has advanced since 1978 and the crisis of intellectual mediocrity

Construction Stakeholder Management Ezekiel Chinyio, Paul Olomolaiye, 2009-10-22 This book captures best practice in construction stakeholder management using a range of international case studies It demonstrates stakeholder mapping presents the power interest matrix and analyses a model for the timely engagement of stakeholders The increased use of partnering and other relational forms of contracting have underlined the need for project participants to work together and also to be aware of all those who can affect or be affected by a project and its associated developments Stakeholder management enables them to see this wider picture and provides guidance for managing the diverse views and interests that can manifest in the course of a project's life All construction projects have the potential for conflicts of interest that can result in costly and damaging legal proceedings This new book advocates an alternative to dispute resolution that is proactive practical and global in its application *Construction Stakeholder Management* is therefore an essential text for advanced students lecturers researchers and practitioners in the built environment **California Builder & Engineer**, 1995

Future Challenges in Evaluating and Managing Sustainable Development in the Built Environment Peter S. Brandon,Patrizia Lombardi,Geoffrey Q. Shen,2017-04-05

Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development It examines the methods of evaluation the use of technology the creation of new models and the role of human factors for examining and developing the subject over the next twenty years

Governing Rural Development Lynda Cheshire,2016-04-22 In recent decades the responsibility for initiating regeneration programmes has been placed firmly in the hands of rural communities with the rationale being that local people are best placed to know their own problems and consequently to develop their own solutions Despite the popularity of this approach the self help approach has its own problems and can be seen as an attempt by governments to reduce public spending This book provides a critical account of the discourses and practices of self help in contemporary rural development policies of Australia and other western nations Although it examines the problems of the self help approach it moves beyond a straightforward exposition of the impediments to self help Instead taking a Foucauldian governmentality perspective it puts forward a theoretical analysis of the self help concept assessing it as a means of governing rural development in an advanced liberal manner It argues that self help should not be regarded as either the empowerment or the abandonment of rural citizens by a shrinking state but rather the application of new ways of thinking about and acting upon rural development

Architectural Publications Index ,1996

Practiceopolis: Stories from the Architectural Profession Yasser Megahed,2020-07-30 This is a graphic novel about the contemporary architectural profession in which it acts as the protagonist in the form of an imaginary city called Practiceopolis The novel narrates quasi realistic stories that exaggerate the architectural everyday and the tacit in order to make them prominent and tangible They depict and dramatise the value conflicts between the different cultures of practising architecture and between the architectural profession and other members of the building industry as political conflicts around the future of Practiceopolis The book uses the metaphorical world of Practiceopolis to provoke big questions about everyday routines in the profession that practitioners may take for granted and to examine different ideologies at work among architects and other members of the construction industry The novel ends in the tradition of dystopian worlds common in a certain strand of graphic novels By vividly illustrating and narrating the critical issues he interrogates the author has created a world which any architect student or professional will

both instantly recognise and simultaneously reject provoking the reader to challenge themselves and the profession at large

Creating Organizational Value through Dialogical Leadership Rens van Loon, 2017-07-27 This book demonstrates Dialogical Leadership which is the workplace application of the Dialogical Self Theory first developed by Dutch psychologist Hubert Hermans in the 1990s It encourages scientists and science practitioners interested in leadership issues to discuss the power of dialogue in solving workplace culture problems Van Loon's work extends the concept of Dialogical Self Theory to the leadership of organizations drawing on social constructionism by the American psychologist Ken Gergen and the leadership framework of British academic Keith Grint This book explicitly links the health of organizations to the psychological and emotional health of those who lead them concluding with the factors of teamwork and motivation Dialogical Leadership jettisons the idea that organizations are run by superheroes presenting a more realistic picture of the workplace This is the first book to isolate generative dialogue as the key mechanism for successful change and transformation programs in organizations It rejects the idea that successful organizations are rational systems conforming to scripts laid down by leaders and it places dialogue and co creation reciprocal exchange at the heart of successful change programs It starts from the kinds of questions leaders ask themselves their interior dialogue and the quality of their interactions with others their external dialogues which can as shown in this book be the difference between success and failure
