Diagnosis and Treatment of Senile Dementia Manfred Bergener, Barry Reisberg, 2012-12-06 Senile dementia is one of the major health problems confronting mankind in this century To some extent the problem has of course always existed The condition was sufficiently troubling to classical philosophers and jurists to have apparently provoked comments by Solon in approximately 500 B C and Plato in the fourth century B C Plutarch 1967 translation Plato 1921 translation Medical recognition can be traced at least as far back as the second century A D Adams 1861 However several factors have converged in this century to extend the absolute dimensions of the problem of senile dementia and to increase societal medical and scientific recognition of the magnitude of the condition Perhaps the most important factor relating to the present importance of senile dementia is demographic Although the human population has been increasing since the mid eighteenth century it has only been since the advent of the twentieth century that a decrease in mortality has been noted for those over the age of 45 McKeown 1976 Consequently the absolute number of aged persons and the proportion of increasingly aged persons in the populations of the world's industrial nations have been steadily increasing For example in the United States 4% of the population was over the age of 65 in 1900 In the 1970 census this proportion had grown to 10%

Muscle Pain: Diagnosis and Treatment Siegfried Mense, Robert D. Gerwin, 2010-07-17 This edition of the companion volumes **Muscle Pain Understanding the Mechanisms** and **Muscle Pain Diagnosis and Treatment** is essential reading for those interested in clinical approaches to acute and chronic pain conditions involving muscle tissues and in the mechanisms underlying these conditions The volumes cover a very important topic in pain medicine since muscle pain is very common and can often be difficult to diagnose and treat effectively Furthermore chronic pain involving muscle and other components of the musculoskeletal system increases with age such that it is a common complaint of those of us who are middle aged or older Indeed as changing population demographics in westernized countries result in higher proportions of the population living longer and being middle aged and elderly chronic muscle pain will likely become even more of a health problem In the case of acute muscle pain this can often be very intense and in the short term can limit or

modify the use of components of the musculoskeletal system associated with the sensitive muscle Chronic muscle pain can also be intense as well as unpleasant and disabling and it is in many cases the over riding symptom of most musculoskeletal disorders that are associated with long term deleterious changes in musculoskeletal function
