Ge Transport Pro Manual:

Engineering Compendium on Radiation Shielding International Atomic Energy Agency, 2013-06-29 The need has arisen for a comprehensive handbook for engineers faced with problems of radiation shielding design Although there are several excellent books on shielding they either do not give enough consideration to the many practical design problems or are limited to special aspects of the subject Recognizing the universal need the International Atomic Energy Agency decided to sponsor the publication of the present Engineering Compendium on Radiation Shielding At the first editorial discussions it was agreed that if such a book were to be undertaken it would be appropriate not only to create a useful design tool for the practising engineer but also to include well referenced basic data for the research worker Although trying to keep the book down to a reasonable size the editors have aimed at a complete presentation of the subject covering and linking both the technology and the science of shielding Efforts to make terms and definitions consistent throughout have been only partially successful owing to the continuing development of new ideas However inconsistencies that could not be eliminated are identified whenever possible

Accounting for Economic Development and Social Change S. J. Keuning, 1996 The relevance of applied economic and social analysis stands or falls with the strength of the analytical tools on the one hand and the appropriateness of the underlying data framework on the other hand Whereas virtually all economic and sociological research focuses on the analytical tools this book deals with the design of an appropriate data framework In many countries it is not so much a lack of data per se that is the problem Official statistics often comprise a wealth of information laid down in many different publications The main difficulty then relates to the lack of integration of these statistics so that all kinds of events that are interrelated in reality can only be studied in isolation Of course the lack of integration of statistics applies less to economic data as the national accounts function as a coordinating information system for these data In fact an important aim of this book is to demonstrate that the basic principles of national accounts can and should be extended to a wider range of statistics notably social and environmental statistics For this purpose a so called System of Economic and Social Accounting Matrices and Extensions SESAME is designed and applied in this book following its announcement in the 1993 System of National Accounts the guidelines of the United Nations and other international organizations
